

SAF LOK MK5 HANDCUFFS

Enhanced for outstanding security and safety

CHARACTERISTICS

- Multi-pinned lock mechanism
- One-piece stainless steel cast body construction
- Interchangeable key with SAF LOK Mk4 handcuffs
- Increased range of fitment
- Reduced range of movement inhibits lock tampering
- Keyless fitting and double locking
- Hinge design reduces movement and increases leverage for user to resist offenders or self-harmers.

SAF LOK Mk5 handcuffs have been developed by Thales Australia to conform to the stringent design parameters of the law enforcement community. SAF LOK Mk5 handcuffs are manufactured at our Lithgow light engineering facility and are currently in service with Australian law enforcement agencies. SAF LOK Mk5 handcuffs are an enhanced version of the SAF LOK Mk4 handcuff.

SAF LOK Mk5 handcuffs

SAF LOK MK5 HANDCUFFS

ENHANCED FOR OUTSTANDING SECURITY AND SAFETY

Easy to use

SAF LOK Mk5 handcuffs are simple to fit and double lock. The smooth ratchet action ensures that the handcuffs can be applied to large and small wrists with minimum effort.

The double locking is by fingertip. Because double locking does not require a key, control of the subject is gained without loss of momentum.

In stressful tactical situations, the law enforcement officer is free to concentrate on the rest of the mission as soon as the cuffs have been applied. The user-friendly locking system also enables the officer to reset the cuffs quickly on removal, ready for reuse.

Secure

The cuff has a unique tumbler lock that is more resilient to tampering than other cuffs on the market.

The hinge design provides for a semi-rigid handcuff permitting restricted movement of the subject's hands in one direction only. Restricted movement means less likelihood of the subject inflicting self-injury.

The design of the handcuff provides a convenient grip for the law enforcement officer to effectively gain control of an unruly subject. Even if the handcuff ratchet arm is sawn through, the ratchet will stay in position until unlocked. Unique keys offer improved pick resistance.

Strong

Every law enforcement officer needs a set of handcuffs whose design is optimised to deal effectively with all law enforcement situations. One-piece casting of cheek plates, locking arms, swivels and manufactured link pins provide a stronger handcuff than models with laminated plates, rivets and welds. The body of the handcuff is manufactured from cast, high-grade stainless steel and it also serves as the body of the lock making it a very unique design. The arm, links and link pins are also manufactured from stainless steel. The cuffs are tensile tested to NIJ international standards.

Long Life

High quality long-life equipment represents security for the officer and value for the purchasing agency. Money saved by purchasing long-life equipment can be used to meet other priorities. Using one-piece casting techniques during manufacture instead of pressed steel, ensures long life of the handcuffs.

A combination of unique design and the selective use of materials gives the SAF LOK handcuff an enviable reputation for long life. Many of the original cuffs manufactured in the 1960s are still in daily service.
