

Decoder definition

New decoder test and validation

New decoder export to real time technical analyzer library (ex TRC641 or TRC8050)

LG 105 Decoder programming software

LG 105 is a sophisticated off-line decoder programming software .

LG 105 allows the definition of new decoders, to test and validate them and finally to export and update the decoding library of the real time analyzers such as TRC641 and TRC 8050.

By this way, LG 105 makes possible real time analyzers becoming more and more powerful.

LG 105 is available in French, English, Spanish and other exploitation languages are possible on request.

- ❖ Decoders definition
- ❖ Tests and validation of new decoders
- ❖ New decoders export to real time technical analyzer (ex. TRC 641 or TRC 8050)
