## 1.1 Features

The Toshiba Satellite/Satellite Pro C870D/C875D/L870D/L875D Personal Computer uses extensive Large Scale Integration (LSI), and Complementary Metal-Oxide Semiconductor (CMOS) technology extensively to provide compact size, minimum weight, low power usage and high reliability. This computer incorporates the following features.

Refer to the Parts List for the configuration of each model and the available options.

### ❑ Microprocessor

The Satellite/Satellite Pro C870D/C875D/L870D/L875D computer is equipped with an AMD<sup>®</sup> Comal mobile processor. The processor combines the central processing unit (CPU) with the graphics processing unit (GPU) in a single-chip Accelerated Processing Unit (APU) package and is designed for mobile platforms.

### ❑ Chipset

The Satellite/Satellite Pro C870D/C875D/L870D/L875D is equipped with AMD A70M Fusion Controller Hubs (FCHs).

### ❑ GPU (Graphics Processing Unit)

- (1) Integrated graphic model: AMD integrated graphics (Mobile AMD Comal APUs)
- (2) Discrete graphic model: AMD HD 7610M.

### ❑ Memory

The computer comes with two DDR3 SO-DIMM slots. Two memory modules of 1GB (1,024MB), 2GB (2,048MB), 4GB (4,096MB) or 8GB (8,192MB) can be installed, and it can incorporate up to 16GB of main memory.

### ❑ HDD

(1) HDD: The computer has a 2.5-inch SATA HDD. The following capacities are available:

- 250/320/500/640/750GB
- 1TB

❑ Optical Drive

The computer accommodates a fixed 12.7mm ODD with one of following types:

- Tray Type DVD Super Multi +-R Double Layer drive
- Tray Type BD-combo drive
- Tray Type BD-Writer drive

❑ Display

The PC comes with 17.3"W HD (1600x900), CSV or Non-CSV LED backlight.

❑ Keyboard

A4+10key size 101 keys (US) / 102 keys (UK) / 106 keys (JP) keyboard provides a numeric keypad overlay for fast numeric data entry or for cursor and page control. The keyboard also includes two keys that have special functions in Microsoft® Windows® 7.

❑ Pointing Device

The touch pad and control buttons enable control of the on-screen pointer and scrolling of windows.

❑ Batteries

The computer has two batteries: a rechargeable Lithium-Ion main battery pack and RTC battery (that backs up the Real Time Clock and CMOS memory). The capacity of the main battery pack can be 2200mAh, 4400mAh or 6000mAh depending on the model of computer.

❑ Universal Serial Bus (USB2.0)

One USB port are provided. The ports comply with the USB2.0 standard, which enables data transfer speeds 40 times faster than USB1.1 standard. USB1.1 is also supported.

❑ Universal Serial Bus (USB3.0 (BTO))

Two USB3.0 ports are provided. USB3.0 has a 5 Gbps signaling rate offering 10x performance increase over USB2.0. The port comply with the USB2.0 standard, which enables data transfer speeds 40 times faster than USB1.1 standard. USB1.1 is also supported.

❑ External monitor (RGB) port

## 1 Hardware Overview

---

The port enables connection of an external monitor, which is recognized automatically by Video Electronics Standards Association (VESA) Display Data Channel (DDC) compatible functions.

### ❑ Media Card slot

The Media Card Slot can accommodate types of media (SD/Mini SD (card adapter is needed)/Micro SD (card adapter is needed)/SDHC memory card/SDXC memory card/MMC) with various capacities. Media cards let you easily transfer data from devices, such as digital cameras and Personal Digital Assistants, which use Media Card flash-memory.

### ❑ Sound system

The sound system is equipped with the following features:

- Azalia Link (AMD High Definition Audio I/F) built in the AMD A70M FCH + Realtek ALC269
- Amplifier: Realtek ALC269 built-in
- Speaker: 1.5W/4ohm speaker

### ❑ Internal LAN

The computer is equipped with LAN circuits that support Ethernet LAN (10/100 Mbps). It also supports Wakeup on LAN (WOL), Magic Packet.

### ❑ Wireless LAN /Bluetooth (BTO)

The computer is equipped with PCI-E MiniCard type wireless LAN board that supports 802.11 a/b/g/n in the PCI-E MiniCard slot or combo with Bluetooth through USB interface. This function can be switched on and off by a keyboard hot-key.

### ❑ Webcam Module

The computer is equipped with a webcam module which is embedded to transfer video data – to take still image and offer video stream for end user to preview/record motion image through USB 2.0 interface.

### ❑ HDMI port

A HDMI port is provided which complies with the HDMI 1.4a standard.

Headphone Jack

The computer is equipped with a headphone jack.

Microphone Jack

The computer is equipped with a microphone jack.

The front of the computer is shown in figure 1-1.

**Kommentar [z1]:**  
Please use the more detail photo to show computer and system unit configuration.

Figure 1-1 The front and left view of the computer

The system unit configuration is shown in figure 1-2.

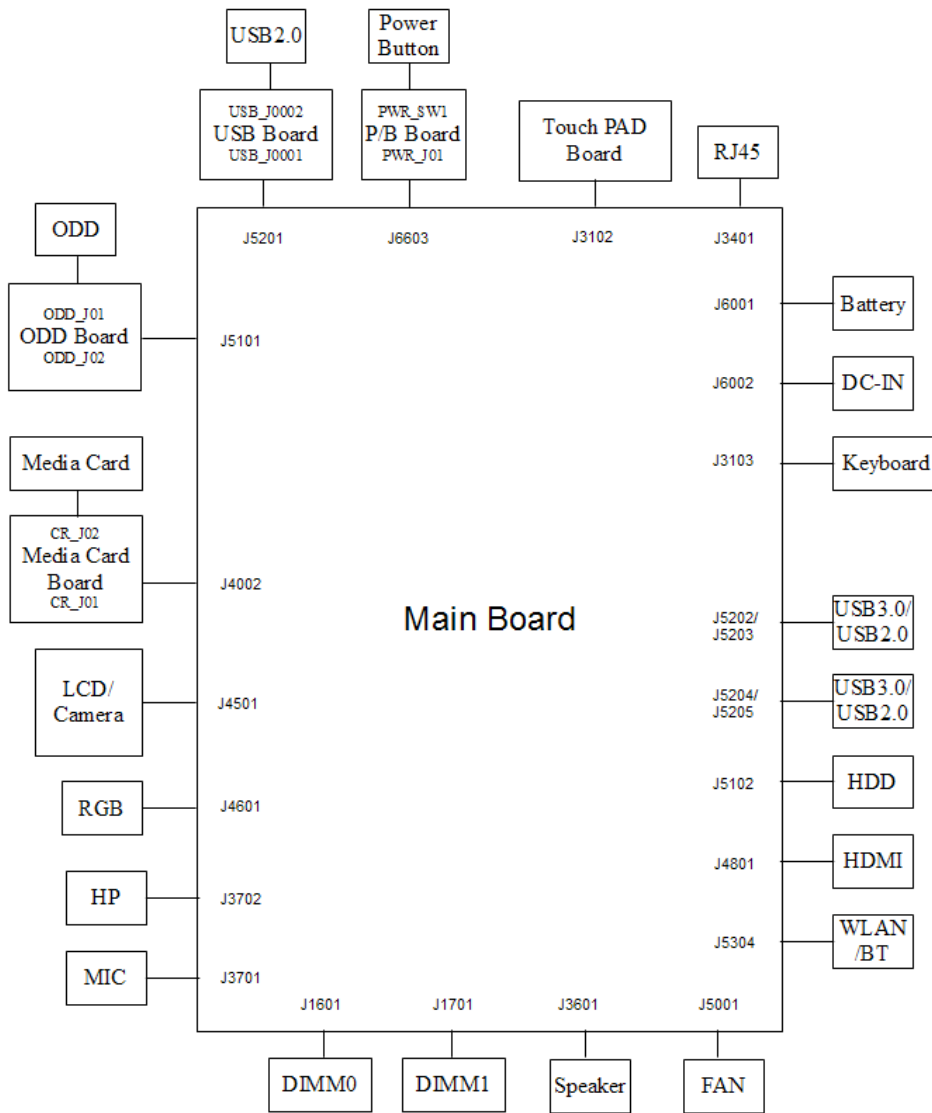

Figure 1-2 System unit configuration

The system unit is composed of the following major components:

❑ Processor

- AMD® Comal multi-chip package mobile processor
- Core speed:
  - AMD® Comal A10 processors:
    - A10-4600M (Max/Base:3.2GHz/2.3GHz)(L2 Cache 4M)
  - AMD® Comal A8 processors:
    - A8-4500M (Max/Base:3.0GHz/2.1GHz) (L2 Cache 4M)
  - AMD® Comal A6 processors:
    - A6-4400M (Max/Base:3.2GHz/2.7GHz) (L2 Cache 1M)
- Features:
  - Up to quad core and 4MB L2
  - AMD Turbo Core 3.0 technology
  - AMD Power Express 5.0 with Dual Graphic support
  - Multiple GPU configurations
  - Supports up to DDR3-1600
  - 16GB maximum memory support
  - PCI Express: one 16-lane PCI Express port, Supports PCI Express 2.0
  - Internal Graphics Controller
  - Next generation DirectX® 11
  - AMD Unified Media Interface (AMD UMI)
  - 722-pin 35 mm x 35 mm mPGA package

❑ BIOS EEPROM

- 16/32Mbit SPI serial flash
- Supply voltage: 2.7~3.6V
- Low power consumption: active read: 10mA (typical); standby: 5uA (typical).
- 8-lead SOIC package

### ❑ Memory

Two memory slots are provided. Expansion up to 16GB is available.

- Memory
  - DDR3-SDRAM
  - 1066/1333/1600 MHz
  - 1.5 volt operation
  - FBGA
- Memory Module
  - 204 pin, SO Dual In-line Memory Module (SO-DIMM)
  - PC3-8500, PC3-10600, PC3-12800
  - 1GB (1,024MB), 2GB (2,048MB), 4GB (4,096MB), 8GB (8,192MB)

### ❑ AMD FCH

- One AMD® A70M Chipset is used.
- Features:
  - Supports AMD Fusion™ Accelerated Processor Units (APUs)
  - 1-, 2-, or 4-lane UMI connecting the FCH with the APU
  - Supports six third-generation SATA ports with transfer rates up to 6 Gbit/s
  - AMD High Definition Audio Interface: supports up to 4 codecs.
  - 2 xHCI (v.0.96), 3 OHCI, and 2 EHCI host controllers to support 4 USB 3.0 ports and 10 USB 2.0 ports (A70M)
  - Two cascaded 8237 DMA controllers
  - Two SMBus controllers – one is multiplexed on three pairs of SMBus signals while the other controller is dedicated for ASF
  - 8254-compatible timer
  - ACPI specification 3.0 compliant power management schemes
  - Supports processor C states
  - Supports system S0, S3, S4, and S5 states

### ❑ Card Reader Controller

- Realtek RTS5138 is used

- Futures:
  - USB 2.0 I/F
  - Support High-speed (480Mbps) and Full-speed (12Mbps) Data Transfer
  - SD/MMC Card Controller
  - 24-pin(4x4) QFN package

❑ Sound Controller

- Realtek ALC269
- Mono Microphone-in and stereo headphone-out.
- Internal digital Microphone
- Volume control: Digital control
- Stereo w/ box, 4 ohm / 1.5W.

❑ EC/KBC (Embedded Controller/Keyboard Controller)

- One NUVOTON NPCE795LA0DX chip functions as both EC and KBC.

❑ LAN Controller

- This controller has the following functions:
- Realtek RTL8105E-VD-CG is used
- This controller has the following functions:
  - PCIE I/F
  - Supports 10/100 Mbps Ethernet
  - One RJ45 port
  - WOL support
  - Magic Packet support

❑ Wireless LAN / Bluetooth

- One PCI-E MiniCard is used

## *1 Hardware Overview*

---

- Support 802.11 a/b/g/n or 802.11 b/g/n

## 1.3 HDD/SSD

### 1.3.1 2.5-inch Hard Disk Drive

The removable HDD is a random access non-volatile storage device. It has a non-removable 2.5-inch magnetic disk and mini-Winchester type magnetic heads.

The computer supports a 320GB, 500G, 640GB, 750GB and 1TB.

The HDD is shown in figure 1-4. Specifications are listed in Table 1-1.

Figure 1-4 2.5-inch HDD

Table 1-1 2.5-inch HDD specifications (1/1)

Item	Specifications		
Capacity (GB)	320 GB	500 GB	500 GB
Rotational Speed (RPM)	5400 rpm	5400 rpm	7200 rpm
Height	7.0 mm/9.5 mm	9.5 mm	9.5 mm
User Data Sectors	625,142,448	976,773,168	976,773,168
Bytes / Sector	512	512	512

*1 Hardware Overview*

---

<b>Item</b>	<b>Specifications</b>		
<b>Capacity (GB)</b>	640 GB	750 GB	1TB
<b>Rotational Speed (RPM)</b>	5400 rpm	5400 rpm	5400 rpm
<b>Height</b>	9.5 mm	9.5 mm	9.5 mm

<b>Bytes / Sector</b>	512	512	512

## 1.4 DVD Super Multi Drive

Kommentar [z2]:  
Please add DVD drive photo.

This drive is a combination of DVD-ROM, DVD±R/±RW/-RAM, BD-combo and BD-Writer Drive. It is full-size and runs either 12cm (4.72-inch) or 8cm (3.15-inch) DVD/CDs without an adaptor. It reads DVDs at maximum 8x speed and CDs at maximum 24x speed. It also writes CD-R at maximum 24x speed, CD-RW at maximum 4x speed, DVD±R at maximum 8x speed, DVD-RW at maximum 6x speed, DVD+RW at maximum 8x speed, DVD±R DL at maximum 3.3x~6x speed and DVD-RAM at maximum 3-5x speed.

The DVD is shown in figure 1-5.

Figure 1-5 DVD Super Multi drive

## 1 Hardware Overview

---

The specifications are listed in Table 1-2.

Table 1-2 DVD Super Multi drive specifications (1/1)

Item	Specifications	
	DVD-ROM mode	CD-ROM mode
SATA Interface (Mbytes/s)	150 Mbyte/s	
Average access time (ms)	180ms Typ.	150ms Typ.
Data Buffer Capacity	1MB	
Support Formats	CD-R CD-RW High Speed CD-RW Ultra Speed CD-RW DVD-R DVD-R DL DVD-RW DVD+R DVD+R DL DVD+RW DVD-RAM	

## 1.5 Keyboard

The keyboard has 101(US)/102(UK)/106(JP) keys that consist of character keys and control keys, and is in conformity with JIS. The keyboard is connected to a membrane connector on the system board and is controlled by EC.

Figure 1-6 is a view of the keyboard.

Figure 1-6 Keyboard

## 1.6 TFT Color Display

The TFT color display consists of 17.3-inch LCD module.

The LCD module used for the TFT color display uses a LED backlight as the light source and can display a maximum of 262,144 colors with 1600 x 900 resolution.

Table 1-3 lists the specifications.

*Table 1-3 LCD module specifications (1/1)*

Item	Specifications
	17.3"W HD+(1600 x 900), CSV or Non-CSV type, LED backlight
Number of Dots	1,600 (H) * 900 (V)
Dot spacing (mm)	0.2388 (H) x 0.2388 (V) (TYP.)
Display range (mm)	382.08 (H) x 214.92 (V) (17.3 " diagonal)

## 1.7 Power Supply

The power supply provides different voltages to the system board and performs the following functions:

1. Determines that the DC power supply (AC adapter) is connected to the computer.
2. Detects DC output and circuit malfunctions.
3. Controls the battery icon, and DC IN icon.
4. Turns the battery charging system on and off and detects a fully charged battery.
5. Turns the power supply on and off.
6. Provides more accurate detection of a low battery.
7. Calculates the remaining battery capacity.
8. Controls the transmission of the status signal of the main battery.

The power supply output rating is specified in Table 1-4.

*Table 1-4 Power supply output rating*

Name	Voltage (V)	Use
+VCORE	VID (AMD spec)	APU
+CPU_VDDNB	VID(AMD spec)	Integrated graphic (UMA)
+VDDC_VGA	VID(AMD spec)	Discrete graphic (DSC)
+1.5VS	1.5	APU , Mini Card
+1.5V	1.5	DDR3-SDRAM
+1.2VS	1.2	APU, LVDS Travis IC
1.1VSUS	1.1	FCH
1.1VS	1.1	FCH
+0.75VS	0.75	DDR3-SDRAM
+3VSUS	3.3	FCH, LAN, SPI ROM
+3V	3.3	Camera
+3VS	3.3	FCH, DDR3-SDRAM, LCD, Codec, EC , Mini Card, Card Reader
+3VA	3.3	FCH RTC, EC
+5VSUS	5	FCH, USB
+5VS	5	HDD, ODD, Codec
+5VA	5	USB S&C

## *1 Hardware Overview*

---

+1.8VS_VGA	1.8	Discrete graphic (DSC)
+1.0VS_VGA	1.19	Discrete graphic (DSC)
+3VS_VGA	3.3	Discrete graphic (DSC)
+1.5VS_VGA	1.5	Discrete VRAM

## 1.8 Batteries

The computer has two types of batteries as follows:

- Main battery pack
- RTC battery

The battery specifications are listed in Table 1-5.

*Table 1-5 Battery specifications*

Battery name	Material	Output voltage	Capacity
Main battery(3 cell)	Lithium-Ion	10.8V	2200 mAh
Main battery(6 cell)	Lithium-Ion	10.8V	4400 mAh 6000mAh
RTC battery(CR2032)	Lithium-Ion	3.0 V	210 mAh

### 1.8.1 Main Battery

The removable main battery pack is the computer's main power source when the AC adaptor is not attached. The main battery maintains the state of the computer when the computer enters into resume mode.

## 1.8.2 Battery Charging Control

Battery charging is controlled by an embedded controller (EC). The EC controls whether the charge is on or off and detects a full charge when the AC adaptor and battery are attached to the computer. The system charges the battery.

### Battery Charge

When the AC adaptor is attached, there are two types of charge: When the system is powered off and when the system is powered on. Table 1-6 lists the charging time required for charges.

Table 1-6 Time required for charges

Battery type	Power on (hours)	Power off (hours)
1st battery pack (3cell,6cell, 6cell high capacity battery)	4-10 hours	4 hours max

**NOTE:** The time required when the system is powered on is affected by the amount of power the system is consuming. Use of the fluorescent lamp and frequent disk access diverts power and lengthens the charge time.

If any of the following occurs, the battery charge process stops.

1. The battery becomes fully charged.
2. The AC adaptor or battery is removed.
3. The battery or output voltage is abnormal.

#### Detection of full charge

A full charge is detected only when the battery is charging at charge. A full charge is detected under any of the following conditions:

1. The current in the battery charging circuit drops under the predetermined limit.
2. The charging time exceeds the fixed limit.

## 1.8.3 RTC battery

The RTC battery provides power to keep the current date, time and other setup information in memory while the computer is turned off. Table 1-7 lists the data preservation period of the RTC battery.

Table 1-7 RTC battery charging/data preservation time

Status	Time
Data preservation period (full capacity)	3.5 years

## 1.9 AC Adaptor

The AC adaptor is also used to charge the battery.

Table 1-8 and 1-9 lists the AC adaptor specifications.

*Table 1-8 AC adaptor specifications for integrated graphic model*

Parameter	Specification	
	2-pin	3-pin
Power	65W	
Input voltage	100V-240V	
Input frequency	50Hz-60Hz	
Input current	1.6A or less (100V-240V)	
Output voltage	19V	
Output current	0A to 3.42A (At constant voltage mode)	

*Table 1-9 AC adaptor specifications for discrete graphic model*

Parameter	Specification	
	2-pin	3-pin
Power	75W	
Input voltage	100V-240V	
Input frequency	50Hz - 60Hz	
Input current	1.5A or less (100V-240V)	
Output voltage	19V	
Output current	0A to 3.95A (At constant voltage mode)	

---

Table 2-2 DC IN icon .....11

**Note:**

*In this document, mark ○,<sup>1</sup> means this function is for Intel platform only.*

## 2.1 Troubleshooting

Chapter 2 describes how to determine if a Field Replaceable Unit (FRU) in the computer is causing the computer to malfunction. The FRUs covered are:

1 Power Supply	6 Optical Drive	11 Bluetooth (BTO) ○,I
2 Main Board	7 LAN	12 Camera (BTO)
3 HDD	8 Wireless(WiDi WiFi) LAN	13 HDMI
4 Keyboard/Touch pad	9 Sound component	14 Touch Pad with gesture
5 Display	10 Card reader	15 Battery, RTC Battery

The Diagnostics optical disk or USB disk operations are described in Chapter 3. Detailed Replacement Procedures are given in Chapter 4, *Replacement Procedures*.

The following tools are necessary for implementing the troubleshooting procedures:

The following tools are necessary for implementing the Diagnostics procedures:

For tools required for executing the Test Program, refer to the Chapter 3. For tools required for disassembling/assembling, refer to Chapter 4.

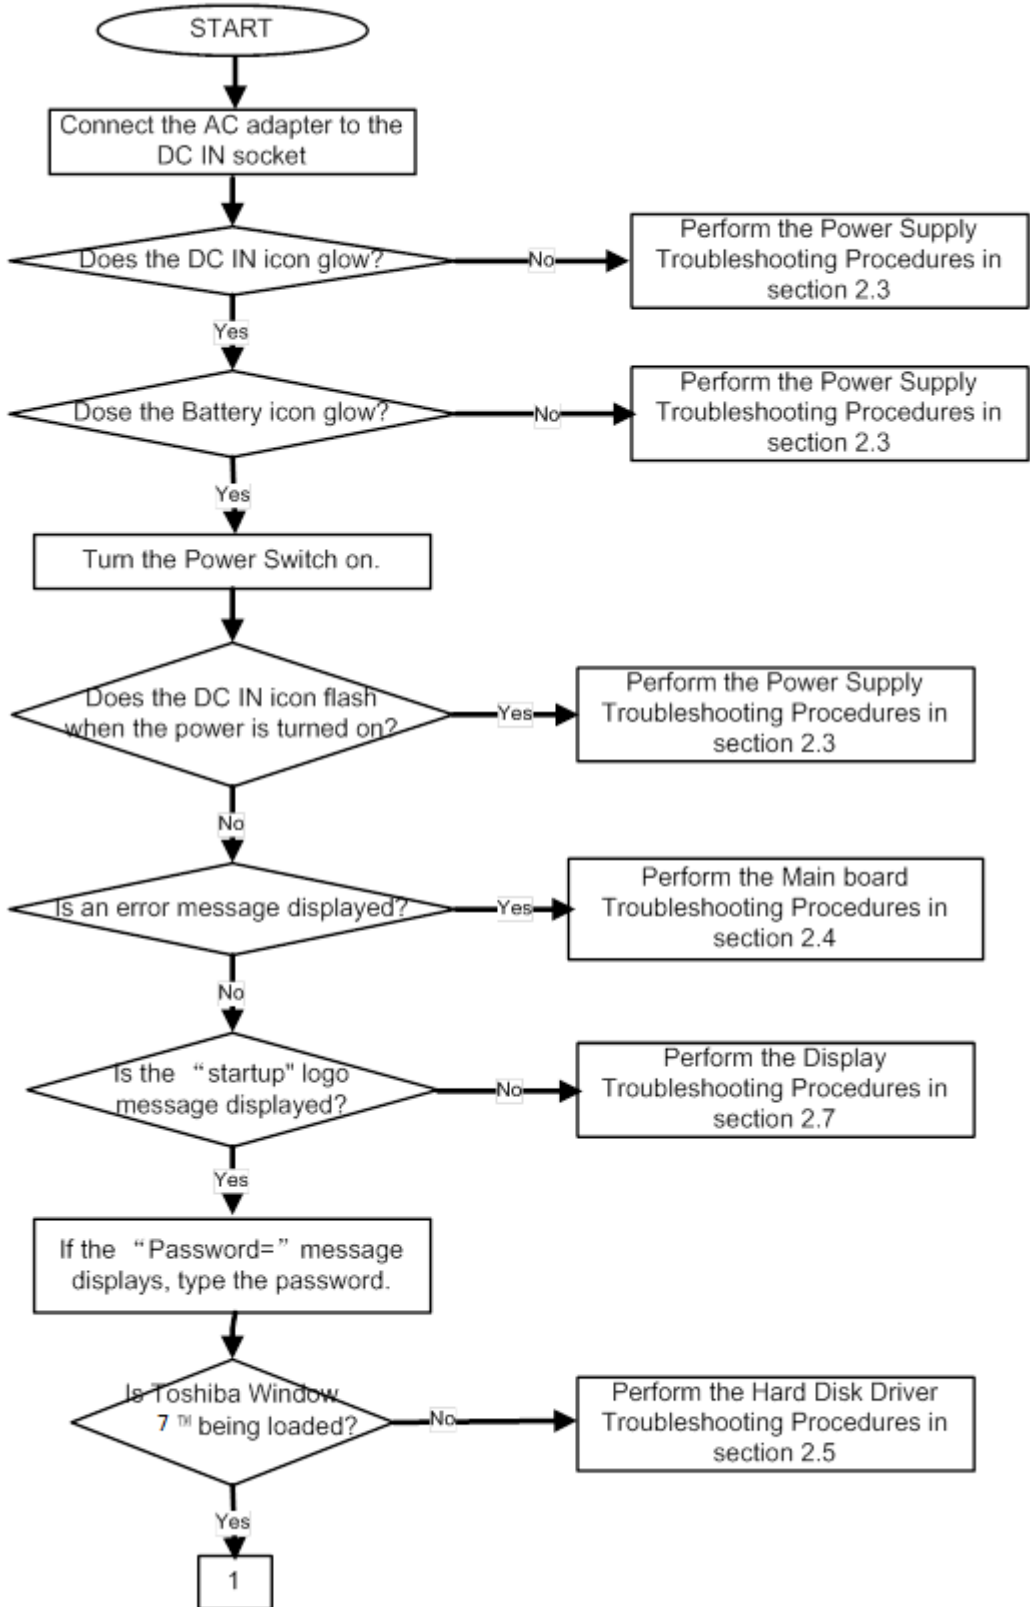

1. A bootable USB key
2. An external CRT display (for Display troubleshooting)
3. An external HDMI display(for HDMI troubleshooting)
4. A Card reader (for Card reader slot troubleshooting)
5. An external microphone (for Sound troubleshooting)
6. Headphone (for Sound troubleshooting)

## 2.2 Troubleshooting Flowchart

Use the flowchart in Figure 2-1 as a guide for determining which FRU is malfunctioning. Before going through the flowchart steps, check the following:

- Ask the user if a password is registered and, if it is, ask him or her to enter the password.
- Make sure that Toshiba Windows 7(TM) is installed on the hard disk. Non-Toshiba operating systems can cause the computer malfunction.
- Make sure all optional equipment is removed from the computer.
- Make sure the HDD and optical drive bays are empty.

*Figure 2-1 Troubleshooting flowchart (1/2)*

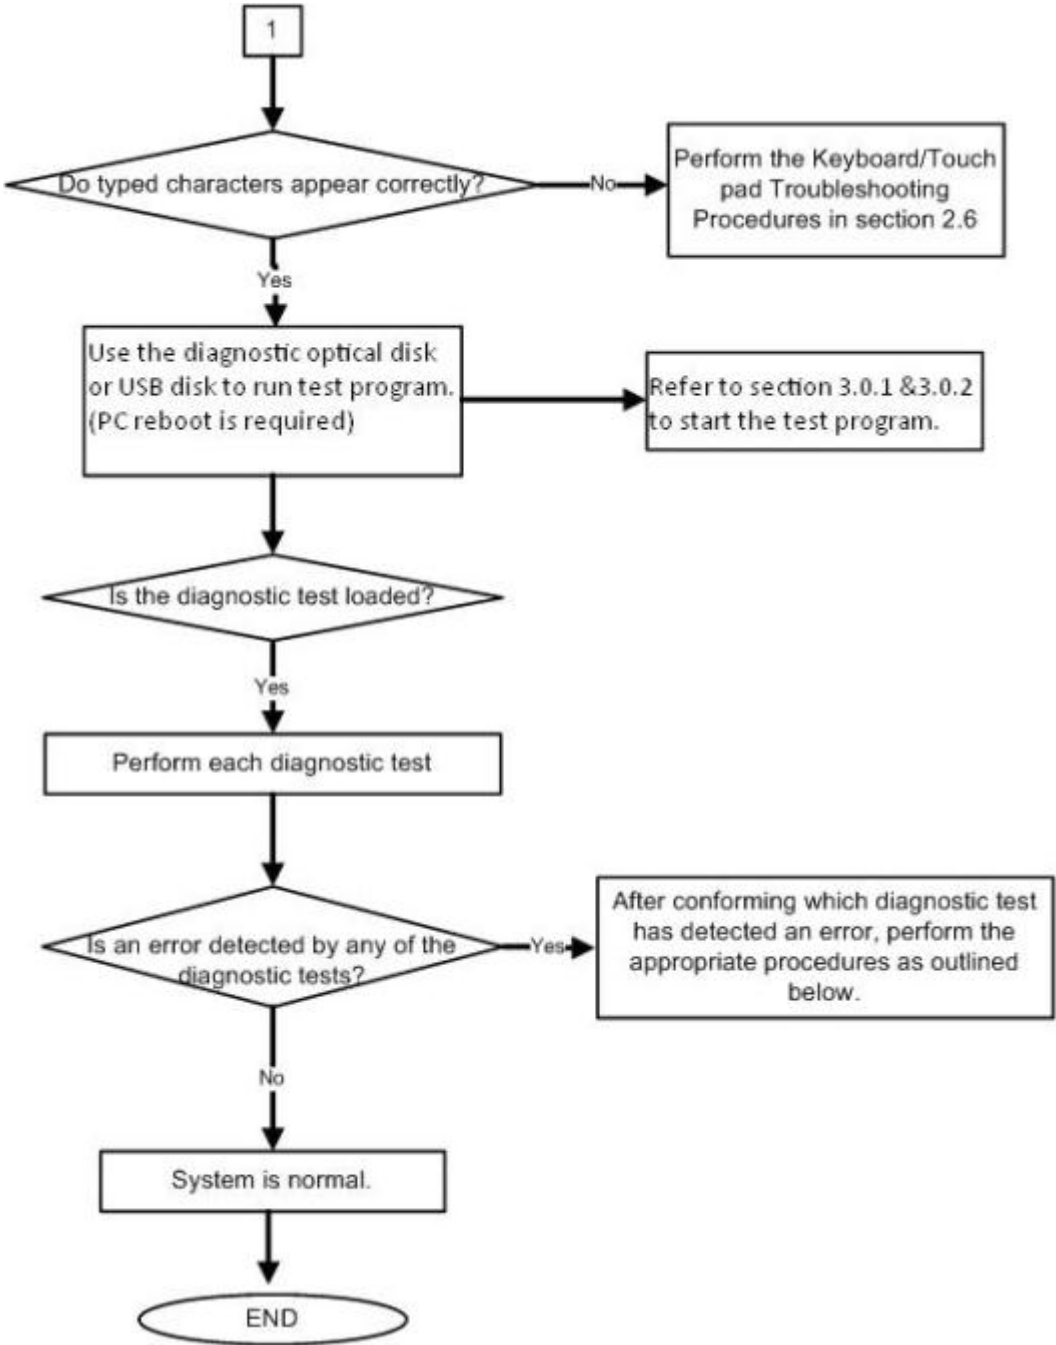

Figure 2-1 Troubleshooting flowchart (2/2)

If the diagnostics program cannot detect an error, the problem may be intermittent. The **Running Test program** should be executed several times to isolate the problem. Check the **Log Utilities function** to confirm which diagnostic test detected an error, then perform the appropriate troubleshooting procedures as follows:

1. If an error is detected on the system test, memory test, real timer test, perform the Main Board Troubleshooting Procedures in Section 2.4.
2. If an error is detected on the hard disk test, perform the HDD Troubleshooting Procedures in Section 2.5.
3. If an error is detected on the keyboard test, perform the Keyboard and Touch pad Troubleshooting Procedures in Section 2.6.
4. If an error is detected on the display test, perform the Display Troubleshooting Procedures in Section 2.7.
5. If an error is detected on the CD-ROM/DVD-ROM/BluRay test, perform the Optical Drive Troubleshooting Procedures in Section 2.8.
6. If an error is detected on the LAN test, perform the LAN Troubleshooting Procedures in Section 2.9.
7. If an error is detected on the Wireless(WiDi WiFi) LAN test, perform the Wireless(WiDi WiFi) LAN Troubleshooting Procedures in Section 2.10.
8. If an error is detected on the sound test, perform the Sound Troubleshooting Procedures in Section 2.11.
9. If an error is detected on card reader, perform the card reader Slot Troubleshooting Procedures in Section 2.12.
10. If an error is detected on Bluetooth, perform the Bluetooth Troubleshooting Procedures in Section 2.13. ○,<sup>1</sup>
11. If an error is detected on camera, perform the camera Troubleshooting Procedures in Section 2.14.

## 2.3 Power Supply Troubleshooting

The power supply controls many functions and components. To determine if the power supply is functioning properly, start with Procedure 1 and continue with the other Procedures as instructed. The procedures described in this section are:

Procedure 1: Icons in the LCD Check

Procedure 2: Connection Check

Procedure 3: Charge Check

Procedure 4: Replacement Check

### Procedure 1 Icons in the LCD Check

The following Icons in the LCD indicate the power supply status:

- Battery icon
- DC IN icon

The power supply controller displays the power supply status through the Battery icon and the DC IN icon in the LCD as listed in the tables below. To check the power supply status, install a battery pack and connect an AC adaptor.

*Table 2-1 Battery icon*

Battery icon	Power supply status
Lights orange	Battery has been charging and AC adaptor is connected.
Lights white	Battery is fully charged and AC adaptor is connected.
Flashes orange	Battery charge is low. The AC adaptor must be connected to recharge the battery.
Doesn't light	Any condition other than those above.

*Table 2-2 DC IN icon*

DC IN icon	Power supply status
Lights white	DC power is being supplied from the AC adaptor.
Doesn't light	Any condition other than those above.

## Procedure 2 Connection Check

The power supply wiring diagram is shown below:

Any of the connectors may be disconnected. Perform Check 1.

- Check 1 Disconnect the AC power cord from the wall outlet. Check the power cable for breaks. If the power cord is damaged, connect a new AC power cord. If there is no damage, go to Check 2.
- Check 2 Make sure the AC adaptor cord and AC power cord are firmly plugged into the DC-IN jack socket and AC adaptor inlet/wall outlet, respectively. If these cables are connected correctly, go to Check 3.
- Check 3 Make sure the DC IN jack is firmly connected to the DC-IN connector on the main board.
- If the DC IN jack is not firmly connected, go to Procedure 5.
  - If it is connected, go to Check 4.
- Check 4 Use a multimeter to make sure the AC adaptor output voltage is close to 19 V. If the output is several percent lower than 19 V, go to Check 5. If the output is close to 19 V, go to Check 6.
- Check 5 Connect a new AC adaptor or AC power cord.
- If the DC IN icon does not light, go to Procedure 5.
  - If the battery icon does not light, go to Check 6.
- Check 6 Make sure the battery pack is installed in the computer correctly. If the battery is properly installed and the battery icon still does not light, go to Procedure 4.

### **Procedure 3 Charge Check**

The power supply may not charge the battery pack. Perform the following procedures:

1. Reinstall the battery pack.
2. Attach the AC adaptor and turn on the power. If you cannot turn on the power, go to Procedure 5.

**Check 1** Make sure the AC adaptor and AC power cord is firmly plugged into the DC IN socket and the wall outlet. If these cables are connected correctly, replace the AC adaptor (and/or AC power cord, if necessary).

**Check 2** Make sure the battery is properly installed. If the battery is properly installed, go to Check 3.

**Check 3** The battery pack may be completely discharged. Wait a few minutes to charge the battery pack. If the battery pack is still not charged, go to Check 4.

**Check 4** The battery's temperature is too hot or cold. Return the temperature to a normal operating condition. If the battery pack still is not charged, go to Check 5.

**Check 5** Replace the battery pack with a new one. If the battery pack still is not charged, go to Procedure 5.

### **Procedure 4 Replacement Check**

The main board processor module may be disconnected or damaged. Disassemble the computer following the steps described in Chapter 4, *Replacement Procedures*. Check the connection between the AC adaptor and main board and connection. After checking the connections, perform the following Check 1:

**Check 1** Replace the AC adaptor with a new one. If the AC adaptor is still not functioning properly, perform Check 2.

**Check 2** Replace the main board with a new one following the steps described in Chapter 4, *Replacement Procedures*.

## 2.4 Main Board Troubleshooting

This section describes how to determine if the main board and CPU are defective or not functioning properly. Start with Procedure 1 and continue with the other procedures as instructed.

The procedures described in this section are:

Procedure 1: Message Check

Procedure 2: Diagnostic Test Program Execution Check

Procedure 3: Replacement Check

### Procedure 1 Message Check

When the power is turned on, the system performs the Power On Self Test (POST) installed in the BIOS ROM. The POST tests each IC on the main board and initializes it.

- ❑ If an error message is shown on the display, perform Check 1.
- ❑ If Toshiba **FREE-DOS** or Windows 7(TM) is properly loaded, go to Procedure 2.

**Check 1** If one of the following error messages appears on the screen, press **F1** as the message instructs. These errors occur when the system configuration preserved in the RTC memory (CMOS type memory) is not the same as the actual configuration or when the data is lost.

Press **F1** as the message instructs to return all system settings to their default values. Then the system reboots. Press F2 to run setup.

If an error message (a) appears often when the power is turned on, replace the RTC battery. If any other error message displays, perform Check 2.

- (a) CMOS Battery Low  
Press F2 to Run Setup, Press F1 to Load Default Values and Continue.
- (b) RAM READ/WRITE Test Failed  
Press F2 to Run Setup, Press F1 to Load Default Values and Continue.
- (c) CMOS DATE/TIME Not Set  
Press F2 to Run Setup, Press F1 to Load Default Values and Continue.
- (d) CMOS Settings Wrong  
Press F2 to Run Setup, Press F1 to Load Default Values and Continue.
- (e) Primary Master Hard Disk Error  
Press F2 to Run Setup, Press F1 to Load Default Values and Continue.

Check 2 The POST checks the main board. When the POST detects an error, the system stops or an error message appears.

If one of the following error messages (1) through (3), (5) or (11) appears, go to Procedure 3.

If the error message (12), (13) appears, go to the Keyboard Troubleshooting Procedures in Section 2.6.

If the error message (15) appears, go to the HDD Troubleshooting Procedures in Section 2.5.

- (1). Refresh timer test failed
- (2). KBC BAT Test failed
- (3). RAM R/W test failed
- (4). KBC BAT Test failed
- (5). CMOS Battery Low
- (6). CMOS Settings Wrong
- (7). CMOS Date/Time Not Set
- (8). DMA Controller Error
- (9). DMA-1 Error
- (10). DMA-2 Error
- (11). Timer Error
- (12). Keyboard/Interface Error
- (13). PS2 Keyboard not found
- (14). PS2 Mouse not found
- (15). Primary Master Hard Disk Error

## **Procedure 2 Diagnostic Test Program Execution Check**

Execute the following tests from the Diagnostic Test Menu. Refer to Chapter 3, *Tests and Diagnostics*, for more information on how to perform these tests.

- |                                       |                           |
|---------------------------------------|---------------------------|
| <b>1. Model, BIOS and CPU Test</b>    | <b>A. LED Test</b>        |
| <b>2. Check MAC Test</b>              | <b>B. LID switch Test</b> |
| <b>3. PAD Test</b>                    | <b>C. SD CARD Test</b>    |
| <b>4. LCDRGB Test</b>                 | <b>D. HDD Test</b>        |
| <b>5. Audio Test</b>                  | <b>E. Wireless Test</b>   |
| <b>6. Keyboard Test</b>               | <b>F. Webcam Test</b>     |
| <b>7. Memory Test</b>                 | <b>G. Speaker Test</b>    |
| <b>8. Function Test</b>               | <b>H. R/W DMI</b>         |
| <b>9. STORE Test[CD/DVD-ROM TEST]</b> | <b>I. FAN Test</b>        |

If an error is detected during these tests, go to Procedure 3.

### **Procedure 3 Replacement Check**

The main board connectors may be disconnected. Disassemble the computer following the steps described in Chapter 4, *Replacement Procedures* and perform Check 1.

Check 1 Visually check for the following:

- a) Cracked or broken connector housing
- b) Damaged connector pins

If their connectors are in good condition, but there is still a problem, go to Check 2.

Check 2 The main board may be damaged. Replace the main board with a new one following the steps described in Chapter 4, *Replacement Procedures*.

## 2.5 HDD Troubleshooting

This section describes how to determine if the HDD is functioning properly. Perform the steps below starting with Procedure 1 and continuing with the other procedures as required.

Procedure 1: Message Check

Procedure 2: Partition Check

Procedure 3: Format Check

Procedure 4: Diagnostic Test Program Execution Check

Procedure 5: Connector Check and Replacement Check

**CAUTION:** *The contents of the hard disk will be erased when you execute the HDD troubleshooting procedures. Transfer the contents of the hard disk to other storage media.*

### Procedure 1 Message Check

When the computer's HDD does not function properly, some of the following error messages may appear on the display. Start with Check 1 below and perform the other checks as instructed.

Check 1 If either of the following messages appears, go to Procedure 2. If the following messages do not appear, perform Check 2.

Insert system disk in drive  
Press any key when ready .....

or

Non-System disk or disk error  
Replace and press any key

Check 2 Make sure the Hard Disk option is set to not used. If it is set to not used, choose another setting and restart the computer. If the problem still exists, go to Procedure 2.

## Procedure 2 Partition Check

Insert the bootable USB key, restart the computer with Esc key pressing down, and choose boot from USB device. Perform the following checks:

- Check 1 Type **C :** and press **Enter**. If you cannot change to drive C, go to Check 2. If you can change to drive C, go to Check 3.
- Check 2 Type **FDISK** and press **Enter**. Choose Display Partition Information from the FDISK menu. If drive C is listed, go to Check 3. If drive C is not listed, return to the FDISK menu and choose the option to create a DOS partition on drive C. Restart the computer from the Toshiba FREE-DOS system disk. If the problem still exists, go to Procedure 3.
- Check 3 If drive C is listed as active in the FDISK menu, go to Check 4. If drive C is not listed as active, return to the FDISK menu and choose the option to set the active partition for drive C. Restart the computer and then go to Procedure 3.
- Check 4 Remove the USB key and restart the computer. If the problem still exists, go to Procedure 3.
- Check 5 Using the **SYS** command on the Toshiba FREE-DOS system disk, install system files on the HDD.

If the following message appears on the display, the system files have been transferred to the HDD. Restart the computer. If the problem still exists, go to Procedure 3.

System transferred

**NOTE:** *If the computer is running Windows 2000, OSR2 or higher and the hard disk has more than 512 MB capacity, the FDISK program will ask if you need support for a partition larger than 2GB. Select Y for large partition support; however, be sure to read the precaution regarding access by other operating systems.*

### Procedure 3    Format Check

The computer's HDD is formatted using the low level format program and the FREE-DOS FORMAT program. To format the HDD, start with Check 1 below and perform the other steps as required.

- Check 1    Format the HDD and transfer system files using **FORMAT C:/S/U**. If the following message appears on the display, the HDD is formatted.

Format complete

If an error message appears on the display, refer to the Toshiba FREE-DOS Manual for more information and perform Check 2.

- Check 2    Using the Diagnostics Disk, format the HDD with a low level format option. Refer to Chapter 3, *Tests and Diagnostics* for more information about the diagnostic program.

If the following message appears on the display, the HDD low level format is complete. Partition and format the HDD using the FREE-DOS FORMAT command.

Format complete

If you cannot format the HDD using the Tests and Diagnostic program, go to Procedure 4.

#### Procedure 4 Diagnostic Test Program Execution Check

The HDD test program is stored in the Diagnostics Disk. Perform all of the HDD tests in the Hard Disk Drive Test. Refer to Chapter 3, *Tests and Diagnostics*, for more information about the HDD test program.

If the problem still exists, go to Procedure 5.

#### Procedure 5 Connector Check and Replacement Check

The HDD may be disconnected, or the HDD or the main board may be damaged. Disassemble the computer following the steps described in Chapter 4, *Replacement Procedures* and perform the following checks:

Check 1 Make sure the HDD is firmly connected to HDD connector on the main board.

If any of the connections are loose, reconnect firmly and repeat Procedure 1. If there is still an error, go to Check 2.

Check 2 The HDD may be damaged. Replace it with a new one following the instructions in Chapter 4, *Replacement Procedures*. If the problem still exists, perform Check 3.

Check 3 The Main board may be damaged. Replace it with a new one following the instructions in Chapter 4, *Replacement Procedures*.

## 2.6 Keyboard and Touch pad Troubleshooting

To determine if the computer's keyboard or touch pad is functioning properly, perform the following procedures. Start with Procedure 1 and continue with the other procedures as instructed.

Procedure 1: Diagnostic Test Program Execution Check

Procedure 2: Connector Check and Replacement Check

### Procedure 1 Diagnostic Test Program Execution Check

Execute the Keyboard Test in the Diagnostic Program. Refer to Chapter 3, *Tests and Diagnostics*, for more information on how to perform the test program.

If an error occurs, go to Procedure 2. If an error does not occur, the keyboard is functioning properly.

### Procedure 2 Connector Check and Replacement Check

The keyboard, touch pad or sensor/switch board may be disconnected or damaged. Disassemble the computer following the steps described in Chapter 4, *Replacement Procedures*, and perform the following checks:

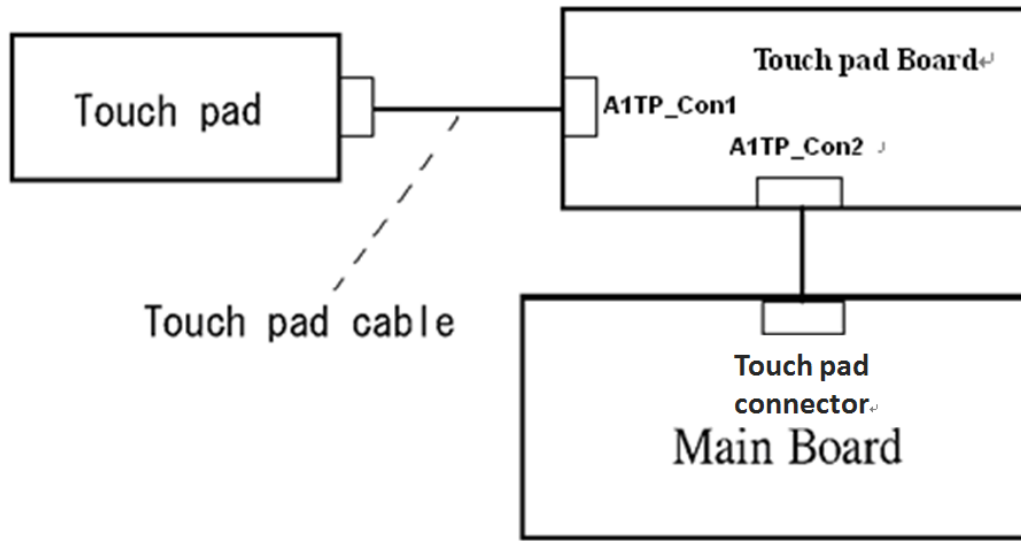

1. If the keyboard or AccuPoint malfunctions, start with Check 1.
2. If the touch pad malfunctions, start with Check 3.
3. If the power switch, InTouch button or Presentation button malfunctions, start with Check 5.

Check 1 Make sure the keyboard cable is securely connected to keyboard connector on the main board.

If the connection is loose, reconnect firmly. If there is still an error, go to Check 2.

- Check 2 The keyboard or its cable may be damaged. Replace it with a new one following the instructions in Chapter 4, *Replacement Procedures*. If the problem still exists, perform Check 5.
- Check 3 Make sure the touch pad cable is firmly connected to A1tp\_Con1 on the touch pad board.

- If the connection is loose, reconnect firmly. If there is still an error, go to Check 4.
- Check 4 The touch pad or the touch pad cable may be damaged. Replace it with a new one following the instructions in Chapter 4, *Replacement Procedures*. If the problem still exists, perform Check 5.
- Check 5 The main board may be damaged. Replace it with a new one following the instructions in Chapter 4, *Replacement Procedures*.

## 2.7 Display Troubleshooting

This section describes how to determine if the computer's display is functioning properly. Start with Procedure 1 and continue with the other procedures as instructed.

Procedure 1: External Monitor Check

Procedure 2: Diagnostic Test Program Execution Check

Procedure 3: Connector Check and Cable Check

Procedure 4: Replacement Check

### Procedure 1 External Monitor Check

Connect an external monitor and turn on the computer. If there is no problem on it, the internal LCD may be defective. Go to Procedure 3. If there is any problem on the external monitor, the main board may be defective. Go to Procedure 2.

### Procedure 2 Diagnostic Test Program Execution Check

The Display Test program is stored on the computer's Diagnostics disk. This program checks the display controller on the main board. Connect the Diagnostics disk, turn on the computer and run the test. Refer to Chapter 3, *Tests and Diagnostics* for details. If an error is detected, go to Procedure 3.

### Procedure 3 Connector Check and Cable Check

Check 1 The LCD and Main board are connected by inverter cable, inverter board and LVDS cable. Make sure the LVDS cable is firmly connected to Main board. If the connection is loose, reconnect firmly and restart the computer. If there is still an error, go to Check 2.

#### **Procedure 4    Replacement Check**

LCD module and main board are connected to display circuits through LVDS cable. Any of these components may be damaged. Refer to Chapter 4, *Replacement Procedures*, for instructions on how to disassemble the computer and then perform the following checks:

Check 1    The LVDS cable or inverter cable may be damaged. Replace it with a new one following the instructions in Chapter 4, *Replacement Procedures*. If the problem still exists, perform Check 2.

Check 3    The Main board or LCD panel may be damaged. Replace it with a new one following the instructions in Chapter 4, *Replacement Procedures*.

## 2.8 Optical Drive Troubleshooting

This section describes how to determine if the optical drive (DVD-ROM, DVD±R/±RW/-RAM and BluRay Drive) in the Slim Select Bay is functioning properly. Perform the steps below starting with Procedure 1 and continue with the other procedures as required.

Procedure 1: Diagnostic Test Program Execution Check

Procedure 2: Connector Check and Replacement Check

### Procedure 1 Diagnostic Test Program Execution Check

The DVD-ROM, DVD±R/±RW/-RAM and BluRay Drive test program is stored on the Diagnostics Disk.

For the test, prepare test Media.

Then connect the Diagnostics HDD, turn on the computer and run the test. Refer to Chapter 3, *Tests and Diagnostics*, for more information about the diagnostics test procedures.

If any errors occur while executing the DVD-ROM, DVD±R/±RW/-RAM and BluRay Drive test, go to Procedure 2.

### Procedure 2 Connector Check and Replacement Check

The optical drive (DVD-ROM, DVD±R/±RW/-RAM and BluRay Drive) is connected to the main board. The connectors may be disconnected from the main board or may be damaged. Disassemble the computer following the steps described in Chapter 4, *Replacement Procedures* and perform the following checks:

Check 1 Make sure the drive to test is firmly connected to ODD connector on the main board.

If the connection is loose, reconnect firmly and repeat Procedure 1. If there is still an error, go to Check 2.

Check 2 The drive may be defective or damaged. Replace the drive with a new one. If there is still an error, go to Check 3.

Check 3    Replace the main board with a new one following the steps in Chapter 4, *Replacement Procedures*.

## 2.9 LAN Troubleshooting

This section describes how to determine if the computer's LAN is functioning properly. Perform the steps below starting with Procedure 1 and continue with the other procedures as required.

Procedure 1: Diagnostic Test Program Execution Check

### **Procedure 1 Diagnostic Test Program Execution Check**

Execute the LAN test program available as part of the LAN test program. Refer to Chapter 3, *Tests and Diagnostics* for more information on how to perform the test program.

## 2.10 Wireless(WiDi WiFi) LAN Troubleshooting

This section describes how to determine if the computer's Wireless(WiDi WiFi) LAN is functioning properly. Perform the steps below starting with Procedure 1 and continuing with the other procedures as required.

Procedure 1: Transmitting-Receiving Check

Procedure 2: Antenna Connection Check

Procedure 3: Replacement Check

### Procedure 1 Transmitting-Receiving Check

Make sure the Wireless(WiDi WiFi) switch of the computer is turned "On." If it is not, please turn it on.

Refer to Chapter 3, *Tests and Diagnostics* for more information on how to perform the test program.

Check 1 Execute test program for the Wireless(WiDi WiFi) LAN function to check the transmitting-receiving function of the Wireless(WiDi WiFi) LAN. You will need a second computer that can communicate by the Wireless(WiDi WiFi) LAN.

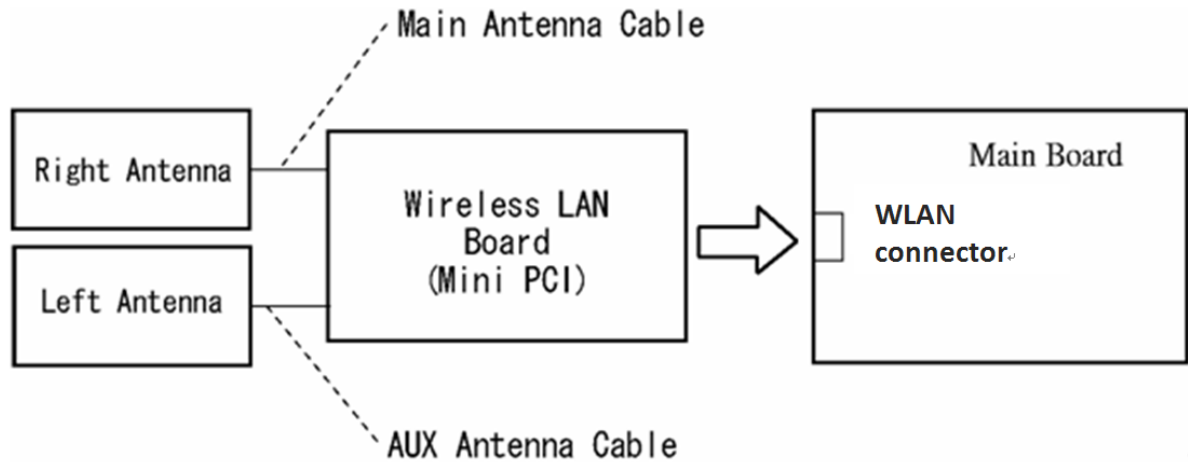

If the computer passes the test, the function is correctly working.

If the computer does not pass the test, perform Procedure 2.

**Procedure 2 Antenna Connection Check**

The Wireless(WiDi WiFi) LAN wiring diagram is shown below:

Any of the connections may be disconnected. Disassemble the computer following the steps described in Chapter 4, *Replacement Procedures*, and perform the following checks:

**Check 1** Make sure the Wireless(WiDi WiFi) LAN board is firmly connected to WLAN connector on the main board.

If the connector is disconnected, connect it firmly. If the Wireless(WiDi WiFi) LAN board is still not functioning properly, perform Check 2.

**Check 2** Make sure the Wireless(WiDi WiFi) LAN antenna cables are firmly connected to the Wireless(WiDi WiFi) LAN board.

If the Wireless(WiDi WiFi) LAN antenna cables are disconnected, connect them firmly. If the Wireless(WiDi WiFi) LAN board is still not functioning properly, go to Procedure 3.

### **Procedure 3 Replacement Check**

The Wireless(WiDi WiFi) LAN antenna, Wireless(WiDi WiFi) LAN board and the main board are connected to the circuits. Any of these components may be damaged. Refer to Chapter 4, *Replacement Procedures*, for instructions on how to disassemble the computer and then perform the following checks:

- Check 1 The Wireless(WiDi WiFi) LAN board may be defective or damaged. Replace the board with a new one following the steps in Chapter 4, *Replacement Procedures*. If the problem still exists, perform Check 2.
- Check 2 The Wireless(WiDi WiFi) LAN antenna may be defective or damaged. Replace the antenna with a new one following the steps in Chapter 4, *Replacement Procedures*. If the problem still exists, perform Check 3.
- Check 3 The main board may be defective or damaged. Replace the board with a new one following the instructions in Chapter 4, *Replacement Procedures* and test the display again.

## 2.11 Sound Troubleshooting

This section describes how to determine if the computer's sound functions are functioning properly. Perform the steps below starting with Procedure 1 and continuing with the other procedures as required.

Procedure 1: Diagnostic Test Program Execution Check

Procedure 2: Connector Check

Procedure 3: Replacement Check

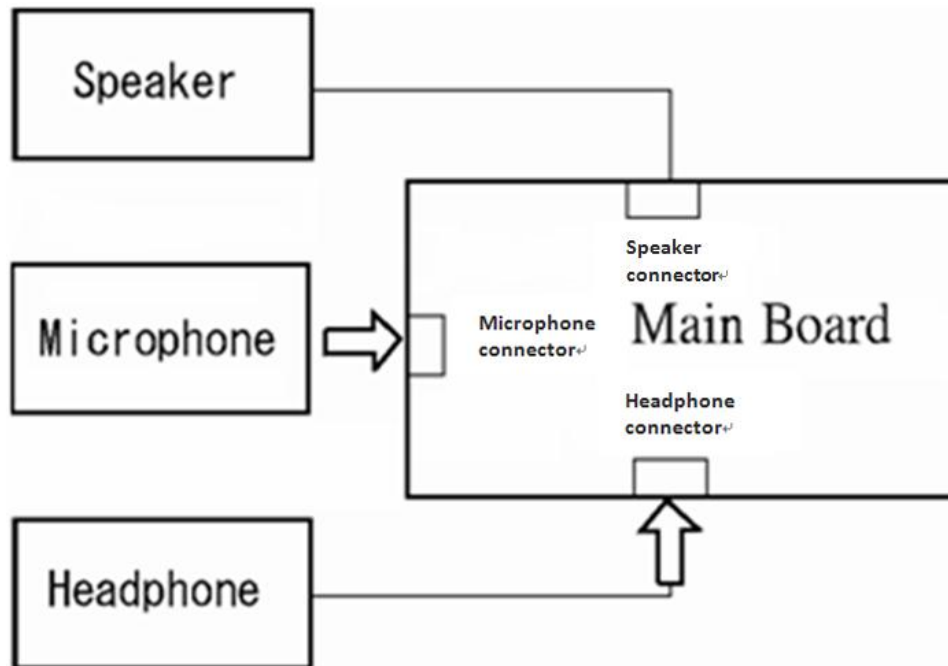

### **Procedure 1 Diagnostic Test Program Execution Check**

Insert the Sound test program in the USB key, turn on the computer and run the test. Refer to Chapter 3, *Tests and Diagnostics*, for details.

If an error is detected, go to Procedure 2.

## Procedure 2 Connector Check

The sound function-wiring diagram is shown below:

Any of the connections may be disconnected. Disassemble the computer following the steps described in Chapter 4, *Replacement Procedures* and perform the following checks:

- If the stereo speakers do not work correctly, perform Check 1.
  - If the headphone does not work correctly, perform Check 2.
  - If the microphones do not work correctly, perform Check 3.
- Check 1 If the stereo speakers do not work properly, the speaker cable may be disconnected. Make sure the speaker cable is firmly connected to speaker connector on the Main board. If the stereo speakers are still not functioning properly, go to procedure 3.
- Check 2 If the headphone does not work properly, the headphone cable may be disconnected. Make sure the headphone cable is firmly connected to headphone connector on the Main board. If the sound function still does not work properly, go to procedure 3.
- Check 3 If the microphones do not work properly, the external microphone cable may be disconnected. When using the external microphone, make sure the external microphone cable is firmly connected to microphone connector on the Main board. If the microphones are still not functioning properly, go to procedure 3.

### **Procedure 3 Replacement Check**

- Check 1 If the stereo speakers do not sound properly, the right or left speaker may be defective or damaged. Replace it with a new one. If the stereo speakers still do not work properly, go to Check 4.
- Check 2 If the headphone does not sound properly, the headphone jack may be defective or damaged. Replace it with a new one. If the sound function still does not work properly, go to Check 4.
- Check 3 If the microphones do not work properly, the microphone cable may be defective or damaged. Replace it with a new one. If the microphone still does not work properly, go to Check 4.
- Check 4 The Main board may be defective or damaged. Replace it with a new one.

## 2.12 Card Reader Slot Troubleshooting

This section describes how to determine if the computer's card reader functions are functioning properly. Perform the steps below starting with Procedure 1 and continuing with the other procedures as required.

Procedure 1: Check on Windows 7(TM)

Procedure 2: Connector Check and Replacement Check

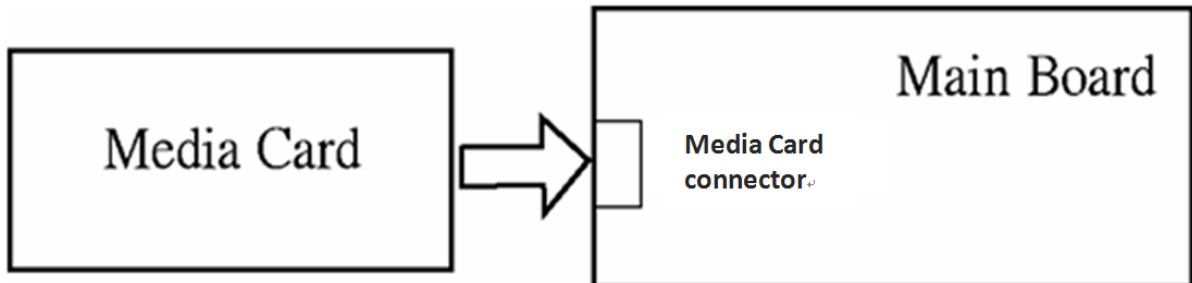

### Procedure 1 Check on Windows 7(TM)

Insert an MMC/SD/MS/MS(PRO) card into the slot. Check if the installed Windows recognizes automatically the MMC/SD/MS/MS(PRO) card and the data in the MMC/SD/MS/MS(PRO) card can be read.

If the card is not recognized or data are not read, go to Procedure 2.

### Procedure 2 Connector Check and Replacement Check

The MMC/SD/MS/MS(PRO) card is connected to media card connector on the Main board.

- Check 1 The MMC/SD/MS/MS(PRO) card and the Main board may be disconnected. Make sure the MMC/SD/MS/MS(PRO) card is firmly inserted to CON3301 on the Main board. If not, insert it firmly. If the MMC/SD/MS/MS(PRO) card is still not functioning properly, perform Check 2.
- Check 2 The MMC/SD/MS/MS(PRO) card may be faulty. Replace it with a new one following the step in Chapter 4 *Replacement Procedures*. If the problem continues, perform Check 3.
- Check 3 The Main board may be faulty. Replace it with a new one following the step in Chapter 4 *Replacement Procedures*.

## 2.13 Bluetooth (BTO) Troubleshooting ○,†

This section describes how to determine if the computer's Bluetooth is functioning properly. Perform the steps below starting with Procedure 1 and continuing with the other procedures as required.

Procedure 1: Diagnostic Test Program Execution Check

Procedure 2: Connector Check and Replacement Check

### **Procedure 1 Diagnostic Test Program Execution Check**

Insert the Bluetooth test program in the USB key, turn on the computer and run the test. Refer to Chapter 3, *Tests and Diagnostics*, for more information about the diagnostics test procedures.

If any errors occur while executing the Bluetooth test, go to Procedure 2.

## Procedure 2 Connector Check and Replacement Check

The Bluetooth is installed on the main board by Bluetooth cable. If the Bluetooth malfunctions, there may be a bad connection between the Bluetooth and the main board. Or the Bluetooth, main board or the Bluetooth cable might be damaged.

Disassemble the computer following the steps described in Chapter 4, *Replacement Procedures* and perform the following checks:

- Check 1 Make sure the Bluetooth is firmly connected to Bluetooth connector by Bluetooth cable on the main board and the connector of the Bluetooth.

If a connector is disconnected, connect it firmly and repeat Procedure 1. If the Bluetooth is still not functioning properly, perform Check 2.

- Check 2 The Bluetooth may be defective or damaged. Replace it with a new one following the steps in Chapter 4, *Replacement Procedures*. If the Bluetooth is still not functioning properly, perform Check 3.
- Check 3 The Bluetooth cable may be defective or damaged. Replace it with a new one following the steps in Chapter 4, *Replacement Procedures*. If the Bluetooth is still not functioning properly, perform Check 4.
- Check 4 The main board may be defective or damaged. Replace it with a new one following the steps in Chapter 4, *Replacement Procedures*.

## 2.14 Camera (BTO) Troubleshooting

This section describes how to determine if the computer's camera is functioning properly. Perform the steps below starting with Procedure 1 and continuing with the other procedures as required.

Procedure 1: Diagnostic Test Program Execution Check

Procedure 2: Connector Check and Replacement Check

### **Procedure 1 Diagnostic Test Program Execution Check**

Insert the camera test program in the USB key, turn on the computer and run the test. Refer to Chapter 3, *Tests and Diagnostics*, for more information about the diagnostics test procedures.

If any errors occur while executing the camera test, go to Procedure 2.

## Procedure 2 Connector Check and Replacement Check

The camera is installed on the main board by camera cable. If the camera malfunctions, there may be a bad connection between the camera and the main board. Or the camera, main board or the camera cable might be damaged.

Disassemble the computer following the steps described in Chapter 4, *Replacement Procedures* and perform the following checks:

- Check 1 Make sure the camera is firmly connected to camera connector by camera cable on the main board.

If a connector is disconnected, connect it firmly and repeat Procedure 1. If the camera is still not functioning properly, perform Check 2.

- Check 2 The camera may be defective or damaged. Replace it with a new one following the steps in Chapter 4, *Replacement Procedures*. If the camera is still not functioning properly, perform Check 3.
- Check 3 The camera cable may be defective or damaged. Replace the LCD cover with a new one following the steps in Chapter 4, *Replacement Procedures*. If the camera is still not functioning properly, perform Check 4.
- Check 4 The main board may be defective or damaged. Replace it with a new one following the steps in Chapter 4, *Replacement Procedures*.

## 2.15 HDMI Troubleshooting

This section describes if the computer HDMI functioning properly. Perform the steps below starting with Procedure 1 and continuing with the other procedures as required.

Procedure 1: Check on Windows 7(TM)

Procedure 2: Connector Check and Replacement Check

### Procedure 1 Check on Windows 7(TM)

Switch play device to “high digital output” and if the HDMI output error then go to Procedure 2.

### Procedure 2 Connector Check and Replacement Check

The HDMI function is work in main board. If the HDMI display malfunctions, there may be a bad connection between the HDMI displayer and the main board. Or the main board might be damaged.

Disassemble the computer following the steps described in Chapter 4, *Replacement Procedures* and perform the following checks:

Check 1 Make sure the HDMI displayer is firmly connected to HDMI connector on the main board by HDMI cable.

If a connector is disconnected, connect it firmly and repeat Procedure 1. If the output is still not functioning properly, perform Check 2.

Check 2 The main board may be defective or damaged. Replace it with a new one following the steps in Chapter 4, *Replacement Procedures*.

## 2.16 Touch Pad Troubleshooting

This section describes if the computer **Touch Pad with gesture** functioning properly. Perform the steps below starting with Procedure 1 and continuing with the other procedures as required.

Procedure 1: Open a Photo

Procedure 2: Test touchpad by Gesture

### Procedure 1 Open a Photo

### Procedure 2 Test touchpad by Gesture

Follow below can move photo.

Follow below can change photo dimension

## 2.17 Battery, RTC Battery Troubleshooting

This section describes if the computer **battery and RTC battery** functioning properly. Perform the steps below starting with Procedure 1 and continuing with the other procedures as required.

Procedure 1: AC in to charge the battery

Procedure 2: Log in BIOS

### **Procedure 1 AC in to charge the battery**

Make sure AC in for a while, and then remove AC to see if battery has power and it can support computer on.

### **Procedure 2 Log in BIOS**

Log in BIOS to see if the system current time is the same with nature time.

If not, please correct and check it matched nature time again after a while.

# Tests and Diagnostics

---

### 3.1 Preparation

This chapter explains how to use the Diagnostic Test programs to test the functions of the computer's hardware modules. The test program should be stored on an optical media disk or a USB boot memory.

The test program menu will also consist of some programs which test the hardware function or display the current information of the computer.

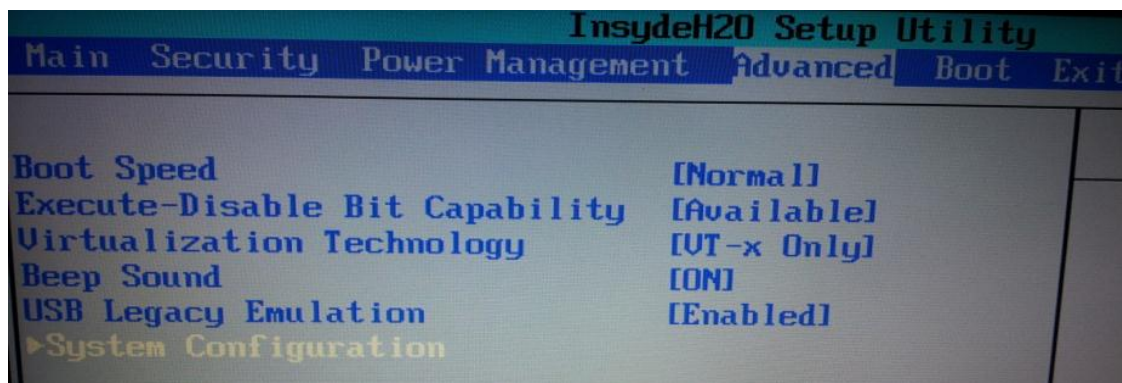

To execute the auto run will automatically run all the test programs.

**NOTE:** Before starting the diagnostics, be sure to follow these steps:

1. Check all cables are connected with Audio jack (Microphone & Headphone) firmly.
2. Exit any application and close Windows and power off.
3. Set SATA Controller Mode to "Compatibility" in BIOS. (Setup Utility)
4. When test web camera/SD Card/ODD device, please use ISO image test program with CD-ROM Media.

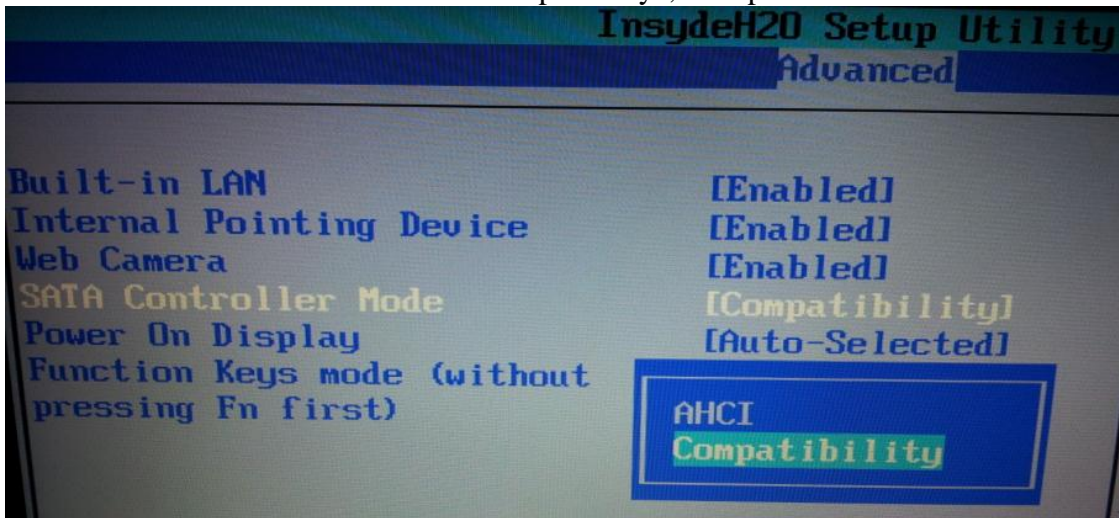

To set SATA Controller Mode to "Compatibility", please follow below steps:

1. Turn on the power, under Toshiba Logo screen press F2 to enter "Setup Utility".
2. Press left and move cursor to "Advanced".
3. Press down and move cursor to "System Configuration", then press enter.

4. Press down and move cursor to "SATA Controller Mode", then press enter.

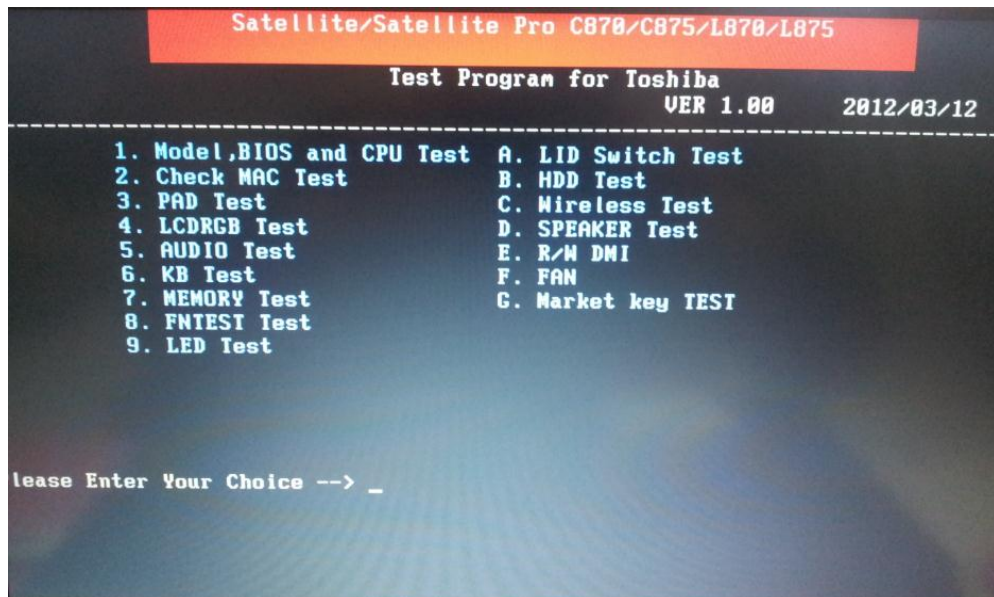

5. Press down and move cursor to “Compatibility”, then press enter.

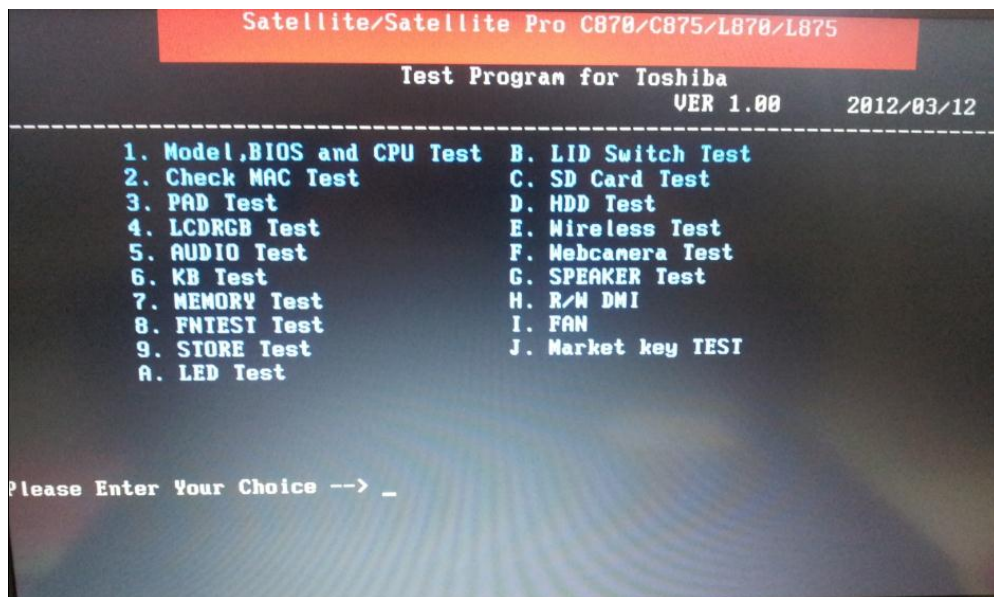

6. Press F10 and enter to restart the PC

The Test MENU consists of the following functions.

USB T&D test menu

ISO image T&D test menu

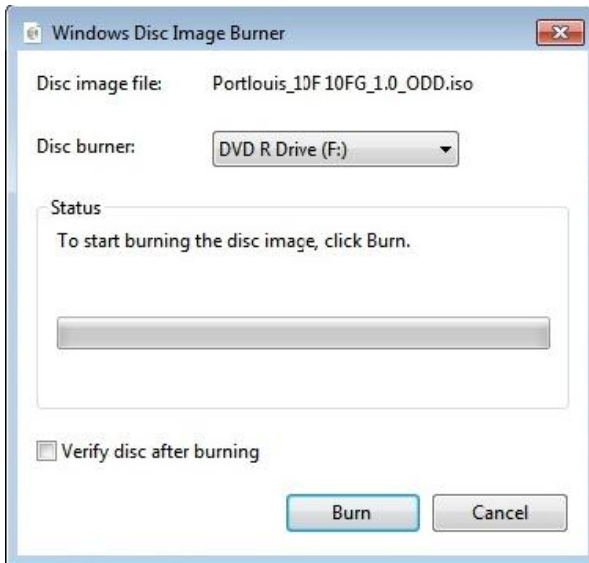

When execute the test item, please key number of testing item.

### 3.1.1 Executing from ISO image

To start the ISO Image Test PROGRAM from CD-ROM, please follow these steps:

1. Burn ISO image test program into optical media disk.

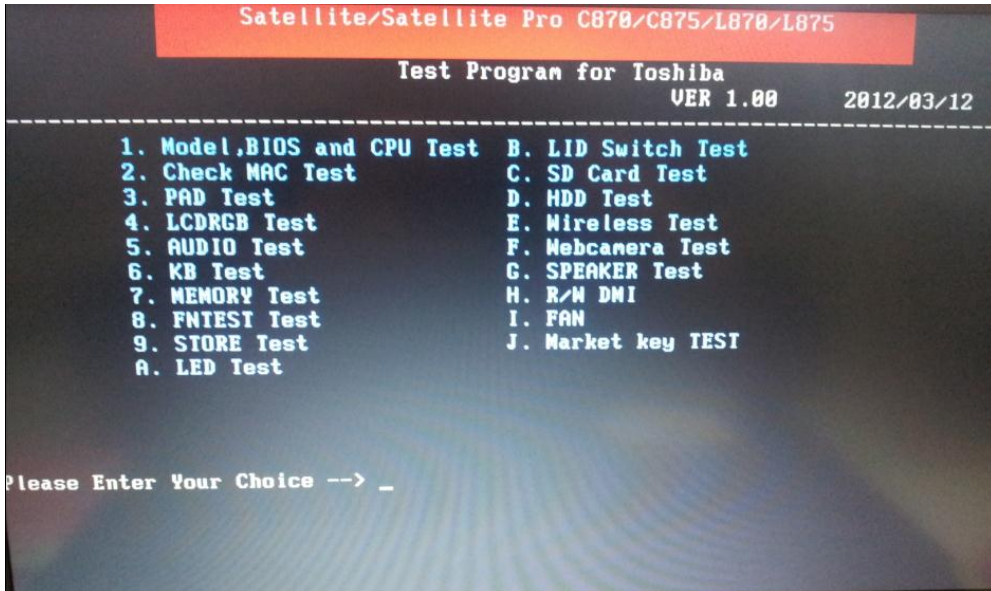

To burn ISO image, please double click the ISO image in Windows 7, then click burn.

2. Insert the optical media disk (ISO Image test program) into optical device.
3. Turn on the power, under Toshiba Logo screen and press F12.
4. Choose ODD from boot menu.

5. System will automatically run the test program and display the test menu.
6. When the test menu displays, please enter the item number to choose and execute the test item.

**Note:**

*Before start test, please make sure to set test SATA Controller Mode to “Compatibility” in BIOS*

*After test, please make sure to set SATA Controller Mode to “ACHI” (default).*

*If it fails when testing an item, press “Ctrl+C” and “Y” then press “Enter” back to the main menu*

*Press any key to back to main menu after each test*

*Please check DMI information correct before test*

### 3.1.2 Executing from USB device

To start the USB Test PROGRAM from USB device, please follow these steps:

1. Please prepare Toshiba PC of Windows 7 OS.
2. Please copy the file for creating a USB-Bootable memory to Windows 7 PC.

The filename of five files and one folder to copy is shown as below.

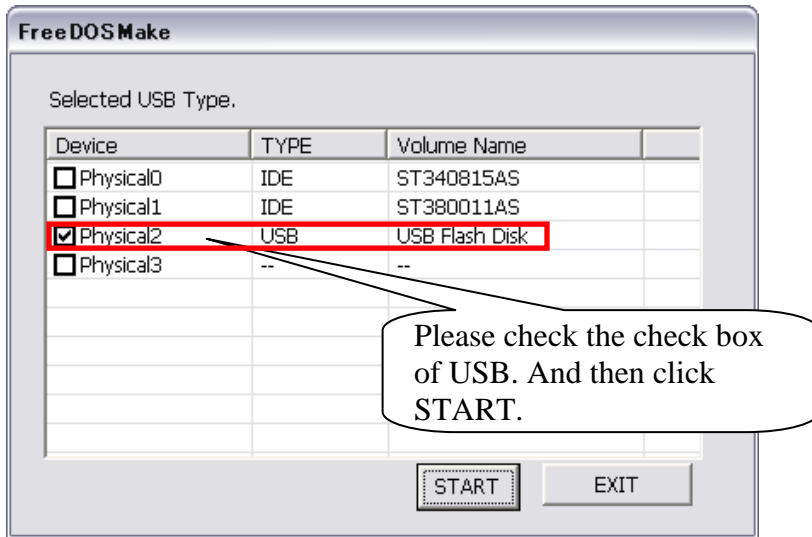

- a) COMMAND.COM
- b) Freedos.bss
- c) FreeDOSMake.exe
- d) KERNEL.SYS
- e) Autoexec.bat
- f) Folder (USBMakingFolder)

Make sure to format the USB disk in FAT mode before creating USB-Bootable memory.

(When you create USB-Bootable disk, please use only one USB-disk.)

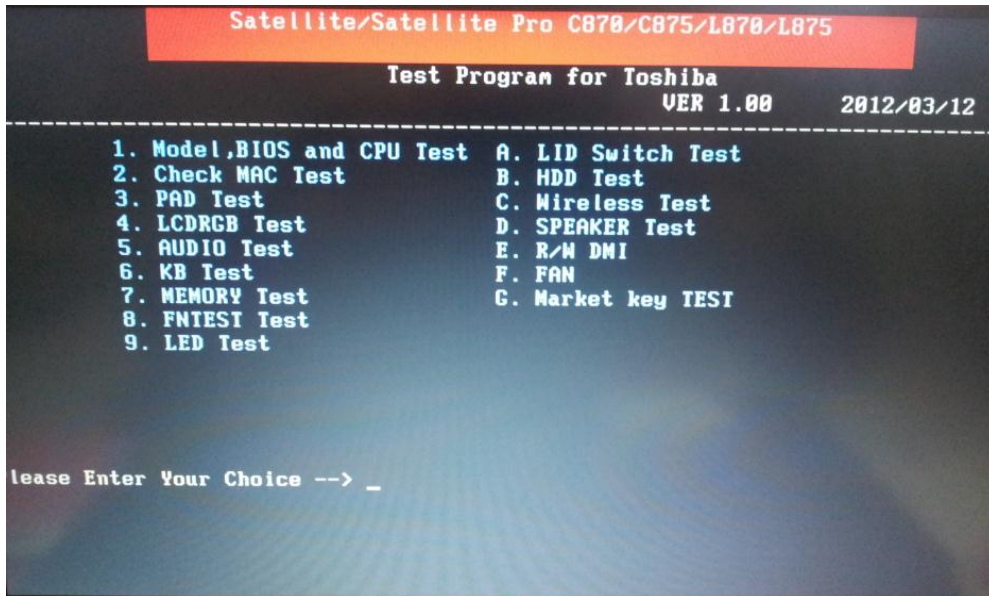

3. Run “FreeDOSMake.exe” on the windows 7 PC and there appears the following picture.

4. Download the compressed file (test program) from the FTP.
5. Unzip it and then copy whole file to USB-disk, overwrite all files.
6. Turn on the power, press F12 when Toshiba Logo appears in the screen.
7. Choose item2 USB from boot menu.

8. System will automatically run the test program and show the test menu.
9. Enter the item number (1~G) to choose and execute the function test.

**NOTE:**

*Before starting test, please make sure to set test SATA Controller Mode to "Compatibility" in BIOS*

*After test, please make sure to set SATA Controller Mode to default "ACHI".*

*If it fails in a test item, press "Ctrl+C" and "Y" then press "Enter" back to main menu.*

*Press any key to back to main menu after each test*

*Please check DMI information correct before test*

### 3.2 Model, BIOS and CPU Test

1. This test displays the two following information.

One is a Model and BIOS information display.

The other one is the information display of CPU and CPU test.

[Model and BIOS information]

```
DMI Utility Rev 1.26          Built Date:06/06/2003
-----
SMBIOS Structure Table Address:F000:E120
Entry Point:E000:6E50

? Please check the Produce, ?
? UUID and BIOS Version.   ?
                          T.C.

Return Code = 1
Press any key to continue . . .
```

Press the any key after above “Model and BIOS information” screen display.

Check CPU information of the T&D is the same with your pc configuration.

[CPU information]

```
SMBIOS Structure Table Address:F000:E120
Entry Point:E000:6E50
DMI Revision:2.7
Structure Numbers:62

Socket Type      : U3E1
Manufacturer     : Intel(R) Corporation
Version         : Intel(R) Core(TM) i3-3110M CPU @ 2.40GHz
Max./Cur./Ext.(MHz) : 4000/2400/100

Current date is Sat 02-18-2012
Current time is  6:10:33.23 pm
```

Please confirm the CPU Spec.  
and current date/time. T.C.

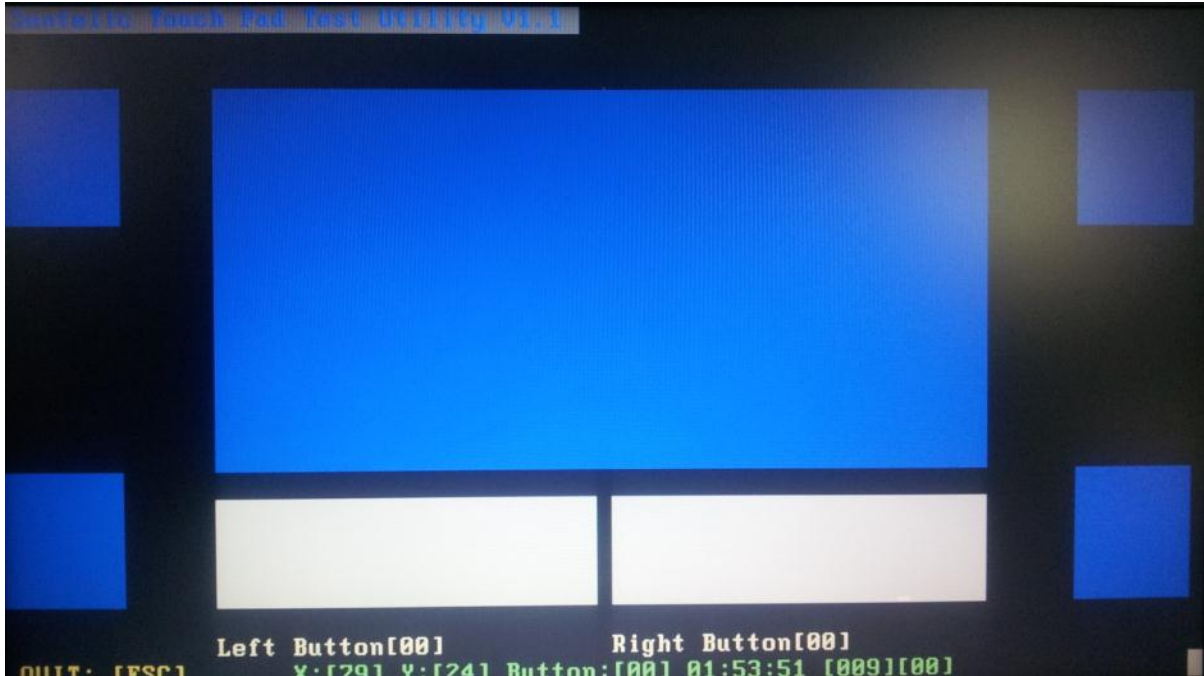

### 3.3 Check MAC Test

This item is check the LAN controller functions and indicates a LAN controller MAC address of ROM. Please check MAC (LAN ID) address with the label on motherboard.

### 3.4 PAD Test

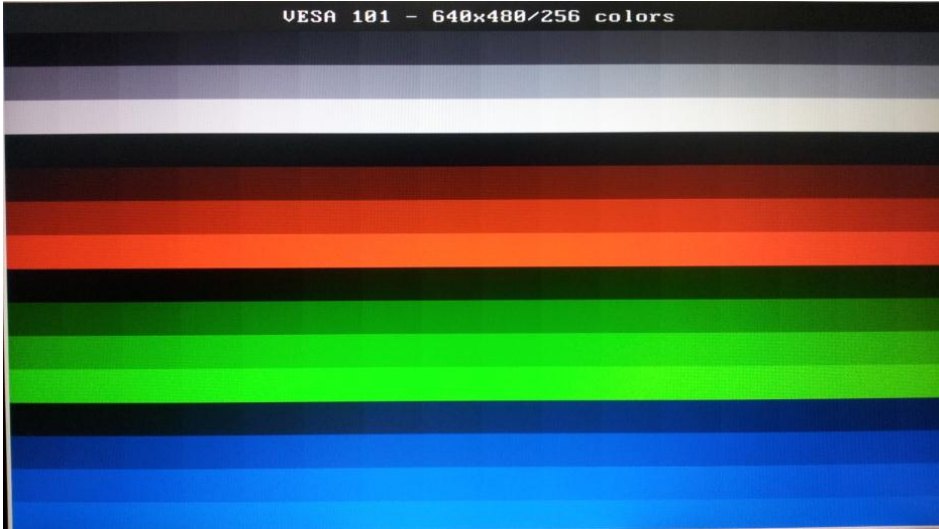

Press both the Left and Right Buttons three times then move cursor to 4 corners.

### 3.5 LCDRGB Test

This subtest displays gradations for following modes. To change the mode, press *Enter*.

[Mode VESA 101 - 640\*480/256 colors]

[Mode VESA 103 800\*600/256 colors]

[Mode VESA 105 1024\*768/256 colors]

### 3.6 Audio Test

*Note: To test the audio device function, you need to plug in the loopback cable.*

```
HD Codec DOS Test Program Version:3.45

### 3.10 STORE Test [CD/DVD-ROM TEST]

*Note: When test ODD device, please use ISO image test program with CD-ROM Media.*

This Program will test if the CD/DVD-ROM works properly in the ODD mode, please insert ISO image test program CD before test.

When test passed, the following screen will be displayed.

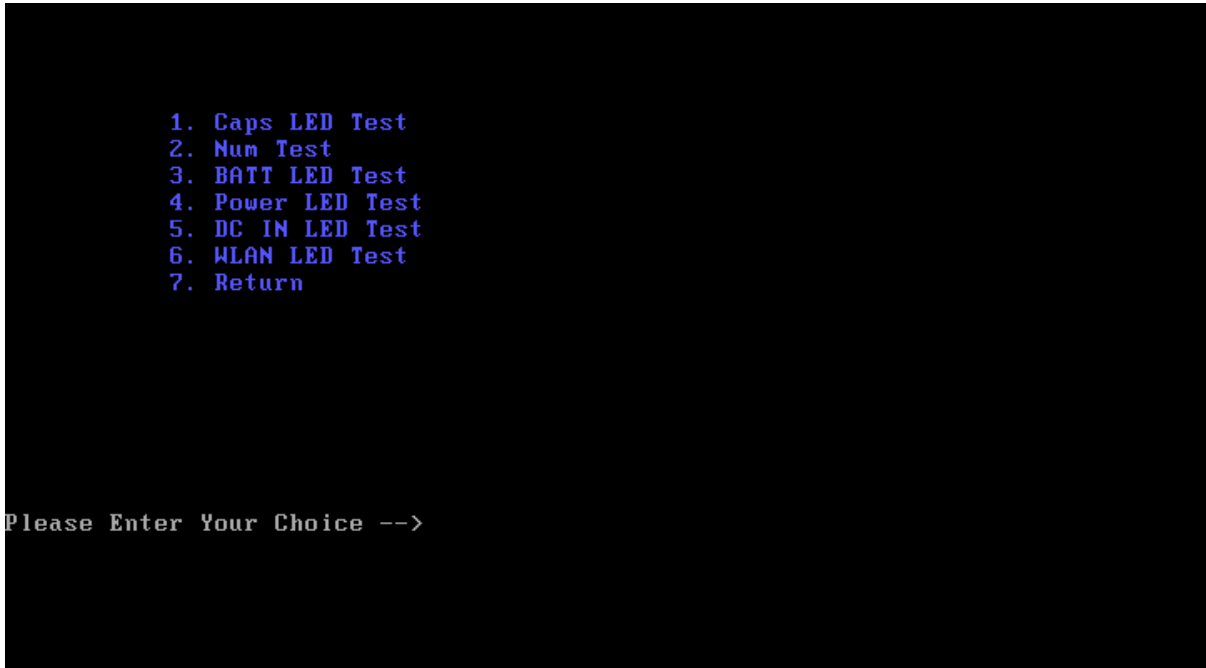

If test fail, the following screen display.

### 3.11 LED Test

Choose a number of test items as following test items.

When testing, please check the statuses of led marked in below picture is right.

### 3.12 LID Switch Test

Run the LID Switch test, refer to the instructions as below.

This part shows how to use the Diagnostics to test the LID functions.

After active LID function (close the upper cover to less than 10 degree) please use your finger, then check LCD bright or not.

### 3.13 SDCARD Test

*Note:*

*When test SD Card device, please use ISO image test program with CD-ROM Media.  
And insert the SD card with unlock condition to SD card slot.*

**UNLOCK**

### 3.14 HDD TEST

There are three items you can choose to test:

1. HDD Detect:

PATA&SATA Utility  
Copyright by Pegatron, Build Date:2008-12-01 Rev1.34

... Device Information List ...

Num	Dev	Device Model	Serial Number	F/W Rev	LBA Size	HDD Size
1		TOSHIBA MK3275GSX	Y1B2C4MTT	GT001M	2542EAB0	320.07GB
3		HATSHITADVD-RAM UJ0B	IN38 393105	1.00		
0						

If it fails to detect HDD, the location of information marked in picture will be empty

## 2. Read HDD:

Build DATE:2008-06-24  
Pegatron HardDisk Utility, Copyright by Pegatron Rev1.36 Diags

=====  
**... Read Twice Test ...**  
=====

Num	Type	Device Model	LBA Size	HDD Size	Buffer Size(Sector) = 7F			
					R	W	B	C
00			2542EAB0	320.07GB	OK			OK
Start Time	End Time	Test Sector	Error Sector	Test Timer	Percent			
21:57:28		38000		4	0			

## 1. R/W HDD:

**Note:**

When test the read and write HDD, the password is: hard disk

### 3.15 Wireless Test (Wireless device detective check)

This program is to detective Wireless device.

```
Build DATE:2008-10-30
Pegatron          COMMON Tool, Copyright by Pegatron Rev2.26          Diags
=====
Search Data = NETWORK CONTROLLER

The Result Is :
Line 17 =  03    00    00    8086 0885  5F  8086 1305  NETWORK CONTROLLER

                                     [ WIRELESS device check PASS!! ]
                                     [-----T.C.-----]

Press any key to continue . . .

Return_Code=0
```

**Note:**

*This test program tests the WIRELESS device ID pass or fail.*

### 3.16 Web camera Test

This program is to check webcamera ID.

Due to web camera is a USB device for this model, so it can not be test by USB file, please test it by using ISO file.

*Note:*

*When test the Web camera, the program will check the device ID, all of the USB ports will be closed, so you cannot test this one within the USB mode. Please test it in the ODD mode.*

### 3.17 Speaker Test

This program will test left channel, right channel and two wave files to test speaker function.

```

HD Codec DOS Test Program Version:3.45
Play a wave file (48k sampling rate/16-bits stereo file)
  You must hear some music. Yes/No ?
  Press 'Y' to stop playing(If the function is passed)
  Press 'N' key (If the function is failed)
1.Line_Out Left Channel Test
2.Line_Out Right Channel Test
Playing 44K wave file
Playing 48K wave file
  Playing properly finish !

Copyright(C) 2008, Realtek Semiconductor CO. Ltd

```

**Note:**

When you test the speaker, you can hear two piece of music, press "Y" to continue;  
If you can't hear music, press "N"

### 3.18 Read and write DMI Test

This program could read and write below strings from/to DMI block.

1. Manufacture
2. Product Name
3. Pa-Number
4. Serial Number
5. Type 11
6. UUID

```
1. Read DMI
2. Write Manufacture
3. Write Product Name (32 byte)
4. Write Pa-Number (32 byte)
5. Write Serial Number (32 byte)
6. Read Type11 (64 byte)
7. Write Type11 (64 byte)
8. Write UUID
9. Return

Please Enter Your Choice -->
```

**DMI information: (1. Reader DMI)**

## 4.1 Remove the Battery pack

1. Turn off the power of the computer. Disconnect the AC adapter and other external devices from the computer.
2. Turn the computer face down. Release the battery lock. Pull out the battery pack while sliding the battery latch.

## 4.2 Remove the Media card

1. Grasp the Media card and pull it out.

### 4.3 Remove the HDD

1. Turn the computer upside down.
2. Loosen 1 screw (M2\*6) and remove the HDD cover.

3. Pull the tab of the HDD assembly to remove it from the connector of the HDD cable. Be careful not to damage the connector.

4. Place the HDD assembly on a flat surface, and remove 4 screws (M3\*3).

5. Separate the HDD and HDD Mylar.

## 4.4 Remove the Memory Module

1. Press two latches outward and remove the memory module.

## 4.5 Remove the Optical Disc Driver Module

1. Remove 1 screw (M2\*6) securing the latch of the Optical Disc Drive.
2. While pulling the module towards the direction of the arrow in the figure below, remove the Optical Disc Drive module.

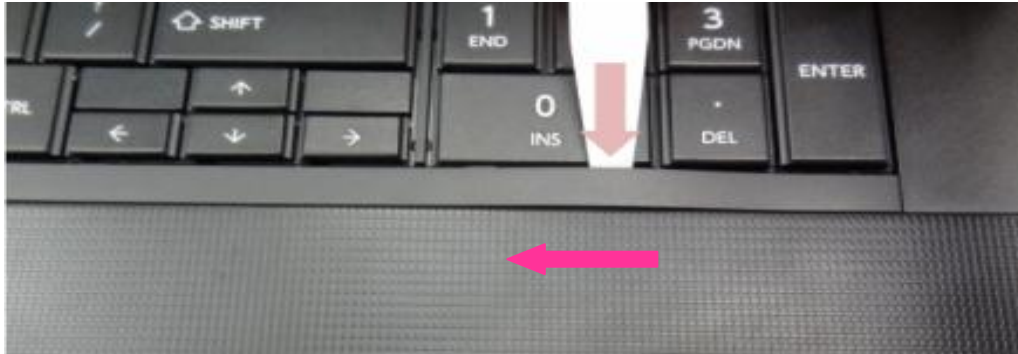

3. Remove ODD bezel ASSY and 2 screws (M2\*3) securing the ODD bracket

## 4.6 Remove the Keyboard

1. Turn the computer over and open the display and remove the keyboard cover.

**Tips:**

To avoid deforming the edges of keyboard, a plastic pry slice of appropriate size is recommended. Please see the below spec.

2. Lift the keyboard plate upward a little and turn it face down on the palm rest. Disconnect

the keyboard flexible cable on the main board, and then remove the keyboard.

## 4.7 Remove the Bottom case

1. Turn the bottom case face up, remove 14 screws (M2\*6) securing the bottom case.

2. Remove 8 screws (M2\*6) securing the Top cover.. Disconnect the Touch pad FFC, power FFC, from the main board.

3. Separate the bottom case from the top cover.

## 4.8 Remove the Touch pad Board

1. Disconnect the Touch pad board FFC.

## 4.9 Remove the Touch pad Button board

1. Remove 2 screws (M2\*3) as the following which fix the Touch pad button board, and then take the touch pad button board out of the bottom case.

## 4.10 Remove the Power Board

1. Disconnect the Power FFC from power board.

2. Remove 1 screw (M2\*3) as the following which fix the power board.

3. Take the power board out of the top case.

## 4.11 Remove the WLAN Board

1. Disconnect the Connector.
2. Remove 1 screw (M2\*3) as the following, and take the WLAN board out of the system.

## 4.12 Remove the ODD Board

1. Disconnect the ODD FFC.

2. Remove the following 1 screw (M2\*3) securing the ODD Board and take the ODD board out of the top case.

### 4.13 Remove the USB Board

1. Disconnect the USB board FFC.

2. Remove the following 2 screws (M2\*3) securing the USB board. Take the USB board out of the top case.

## 4.14 Remove the DC-IN cable

1. Disconnect the DC-IN cable from the main board.

2. Remove the DC-IN cable from the top case.

## 4.15 Remove the Thermal Module

1. Remove the following 2 screws (M2\*5) securing the fan and disconnect the fan cable that connecting the fan with motherboard.
2. Remove 6 screws (M2\*6) on the thermal module, then take the thermal module away.

## 4.16 Remove the Main Board

1. Disconnect the LVDS COMS cable and audio cable from main board.

2. Remove 2 screws (M2\*3) from the SD board and 2 screws (M2\*3) from main board.

3. Removing the main PCB from the bottom case

4. Disconnect the ODD FFC and USB FFC from main board.

## 4.17 Remove CPU

1. Unlock the CPU by turning the cam counterclockwise on the CPU socket 180 degrees using a flat-blade screwdriver.

2. Remove the CPU.

## 4.18 Remove the Speaker

1. Remove the speaker from the top case.

## 4.19 Remove the LCD module

1. Remove the following 4 screws securing the LCD Module.

2. Remove the top case out of the system.

## 4.20 Remove the LCD unit

1. Remove 4 screw covers on the LCD bezel.

2. Remove the following 4 screws (M2.5\*4) securing the LCD bezel.

3. Pry the outside edges softly to separate LCD front bezel from LCD panel and take it away.

4. Disconnect the camera cable

5. Remove 4 screws (M2.5\*4) on LCD hinge caps.

6. Remove the LCD unit from LCD back cover, and place the LCD back cover facedown on a protective surface, disconnect the LVDS cable.

7. Remove 8 screws (M2\*3) securing the LCD supports and then remove them.

## 4.21 Remove the Camera

1. Take the camera out of the LCD back cover.

## 4.22 Replace the Camera

1. Install the Camera on the LCD back cover.

## 4.23 Replace the LCD Unit

1. To assemble the LCD brackets on L-R side of panel and fix 8 screws (M2\*3) to each LCD Brackets.

2. To connect the LVDS CMOS cable with LCD panel and then assemble the LCD panel on the LCD back cover.

3. To fix 4 screws (M2.5\*4) on LCD hinge caps.

4. Connect the camera cable

5. Seat the LCD front bezel pressing firmly all around to secure the latches.

6. To fix the following 4 screws (M2.5\*4) securing the LCD bezel.

7. To fix the following 4 screws (M2.5\*4) securing the LCD bezel.

8. Install 4 screw covers on the LCD bezel.

## 4.24 Replace the LCD Module

1. Install the top case on the system.

2. Fix the following 4 screws securing the LCD Module.

## 4.25 Replace the Touch pad Button board

1. Install the touch pad button board into the bottom case. Fix 2 screws (M2\*3) as the following which securing the Touch pad button board.
