Toshiba Personal Computer Qosmio X500 Maintenance Manual

First edition Aug. 2009

Disclaimer

The information presented in this manual has been reviewed and validated for accuracy. The included set of instructions and descriptions are accurate for the Qosmio X500 series at the time of this manual's production. However, succeeding computers and manuals are subject to change without notice. Therefore, Toshiba assumes no liability for damages incurred directly or indirectly from errors, omissions, or discrepancies between any succeeding product and this manual.

Trademarks

Intel, Intel SpeedStep, Intel Core, Pentium and Celeron are trademarks or registered trademarks of Intel Corporation or its subsidiaries in the United States and other countries/regions.Windows and Microsoft are registered trademarks of Microsoft Corporation.
Other trademarks and registered trademarks not listed above may be used in this manual.

Preface

This maintenance manual describes how to perform hardware service maintenance for the Toshiba Personal Computer Qosmio X500 Series.

The procedures described in this manual are intended to help service technicians isolate faulty Field Replaceable Units (FRUs) and replace them in the field.

SAFETY PRECAUTIONS

Four types of messages are used in this manual to bring important information to your attention. Each of these messages will be italicized and identified as shown below.

DANGER: *"Danger" indicates the existence of a hazard that could result in death or serious bodily injury, if the safety instruction is not observed.*

WARNING: *"Warning" indicates the existence of a hazard that could result in bodily injury, if the safety instruction is not observed.*

CAUTION: *"Caution" indicates the existence of a hazard that could result in property damage, if the safety instruction is not observed.*

NOTE: *"Note" contains general information that relates to your safe maintenance service.*

Improper repair of the computer may result in safety hazards. Toshiba requires service technicians and authorized dealers or service providers to ensure the following safety precautions are adhered to strictly.

❑ Be sure to fasten screws securely with the right screwdriver. If a screw is not fully fastened, it could come loose, creating a danger of a short circuit, which could cause overheating, smoke or fire.

❑ If you replace the battery pack or RTC battery, be sure to use only the same model battery or an equivalent battery recommended by Toshiba. Installation of the wrong battery can cause the battery to explode.

The manual is divided into the following parts:

Chapter 1   Hardware Overview describes the Qosmio X500 system unit and each FRU.

Chapter 2   Troubleshooting Procedures explains how to diagnose and resolve FRU problems.

Chapter 3   Test and Diagnostics describes how to perform test and diagnostic operations for maintenance service.

Chapter 4   Replacement Procedures describes the removal and replacement of the FRUs.

Appendices   The appendices describe the following:

- ❑ Handling the LCD Module
- ❑ Board layout
- ❑ Pin assignments
- ❑ Keyboard scan/character codes
- ❑ Key layout
- ❑ Wiring diagrams

Conventions

This manual uses the following formats to describe, identify, and highlight terms and operating procedures.

Acronyms

On the first appearance and whenever necessary for clarification acronyms are enclosed in parentheses following their definition. For example:

Read Only Memory (ROM)

Keys

Keys are used in the text to describe many operations. The key top symbol as it appears on the keyboard is printed in **boldface** type.

Key operation

Some operations require you to simultaneously use two or more keys. We identify such operations by the key top symbols separated by a plus (+) sign. For example, **Ctrl + Pause (Break)** means you must hold down **Ctrl** and at the same time press **Pause (Break)**. If three keys are used, hold down the first two and at the same time press the third.

User input

Text that you are instructed to type in is shown in the boldface type below:

DISK COPY A: B:

The display

Text generated by the computer that appears on its display is presented in the typeface below:

```
Format complete
System transferred
```

Figures

Tables

1.1 Features

The Qosmio X500 features are listed below.

- ☐ Microprocessor

  Microprocessor that is used will be different by the model.

  It supports processors as follows

  Intel® Core(TM) i7-720QM processor

  1.6GHZ,1.73GHz

  Additional processor may be introduced

- ☐ Memory

  Two DDR3 SO-DIMM (1066MHz specification compliant) used and be up to 4GB which can be upgraded through Memory Module Slot. Maximum upgradeable system memory may depend on the model

- ☐ VRAM

  Shared with System memory for Intel PM55.

- ☐ HDD

  5400rpm: 250GB, 320GB, 400GB, 500GB, internal drives. 2.5 inch x 9.5mm height.

- ☐ USB FDD

  Toshiba external USB FDD for option

- ☐ Display

18.4" Wide WXGA

1-Lamp HD+ (1680 x 945) CSV only (Typical 200 NIT brightness)

2-Lamp FHD (1920 x 1080) CSV only (Typical 300 NIT brightness)

- ☐ External monitor

  Supported via a RGB or HDMI connector.

- ☐ Keyboard

Keyboard module has104/105/109 keys. It supports Windows keys and application keys.

❑ New Dummy card slot

The new card slot (dummy card) accommodates express card.

❑ Optical devices

A DVD Super Multi drive is equipped.

❑ Battery

The RTC battery is equipped inside the computer.
The main battery is a detachable lithium ion battery.

 12 cell Li-Ion   10.8v

❑ USB (Universal Serial Bus)

4 USB ports are provided. The ports comply with the USB2.0 standard,
 USB Sleep and Charge function can be supported by only one port of the left side.(mode 1-4)
If USB Sleep and Charge function is enabled, the computer's battery will discharge during hibernation or when the computer is turned off. It is recommended that user connect the AC adaptor to the computer when enabling the USB Sleep and Charge function.ESATA

❑ One ESATA port is equipped.

Sound system

Internal stereo speaker, Internal MIC external monaural microphone connector, stereo headphone connector.

❑ Wireless LAN

Some computers in this series are equipped with a Wireless LAN card.

❑ LAN/MODEM

Connectors for LAN and Modem are separately mounted.

❑ 1394

One 1394 port is equipped.

❑ Bridge media slot

   XD/MS/MS pro/SD/MMC are supported

❑ Bluetooth

   Some computers in this series offer Bluetooth wireless communication functionality.
   This module is Version 2.1+EDR.

❑ Security

   Kensington Lock,

   Fingerprint –Enhanced Lock is also equipped.

❑ HDD password

   HDD security function
1. Web Camera LED*   2. Web Camera*
3. Built-in microphone*   4. Wireless LAN/Wireless WAN Antennas (Not shown)
5. Speaker   6. Touch Pad
7. Fingerprint Sensor*   8. Touch Pad Control Buttons
9. Display Screen   10. Speaker
11. Power Button*   12. Internet Button*
13. CD/ DVD Button*   14. Previous Button*
15. Volume Down Button*   16. Mute Button*
17. Play/Pause Button*   18. Next Button* 19. Volume Up Button*

Figure 1-1-1 Front of the computer

1.2 System Block Diagram

Figure 1-2-1 shows the system block diagram.
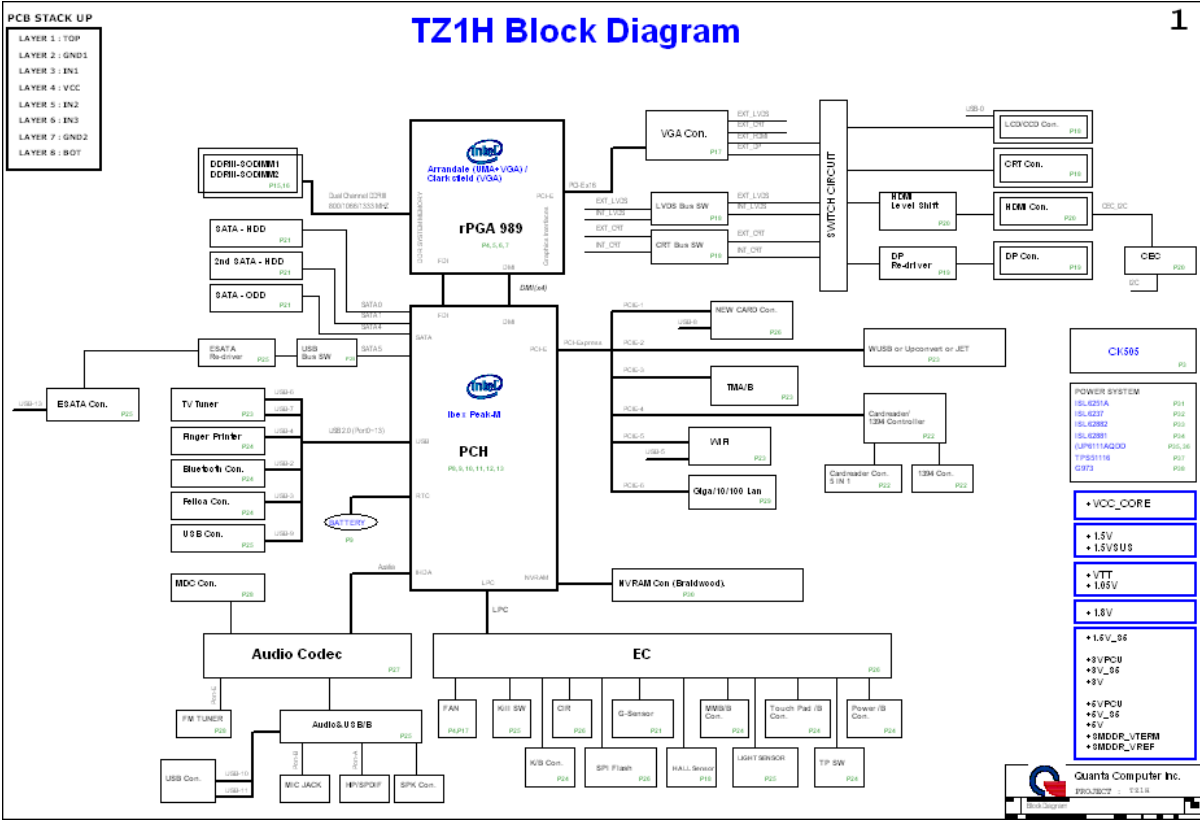

Figure 1-2-1 System block diagram for Intel Platform

The PC contains the following components.

CPU

Intel® Core(TM) i7-720QM processor

 1.6GHz, 1.73GHz

Memory

DDR3-1066MHz 1GB, 2GB or 4GB memory modules

- 200-pin SO-DIMM
- 1.8V operation

BIOS ROM (Flash memory)

- 16Mbit

Chipset

- North Bridge

- Penryn processor System Bus support

    - DRAM Controller : DDR3 1066MHz support
    - DMI
    - 1299-ball 35 x 35mm Mirco FC-BGA Package

- South Bridge

    - Direct Media Interface (DMI)
    - PCI Express
    - Serial ATA Controller
    - PCI Interface
    - Low Pin count (LPC) interface
    - Serial Peripheral Interface (SPI)
    - DMA controller
    - Advanced Programmable Interrupt Controller (APIC)
    - USB Controllers
    - Gigabit Ethernet Controller
    - RTC
    - GPIO
    - Enhanced Power Management
    - SMBus 2.0
    - High Definition Audio Controller
    - 676-pin 31mmx31mm mBGA Package

Other main system chips

•   Clock Generator

•   EC/KBC –[W/CIR(Winbond WPCE775CA0DG)] –[WO/CIR(Winbond WPCE775LA0DG)]

•   HD Audio (CONEXANT CX20583-10Z)

•   Card Reader controller (O2 OZ888GS0LN)

•   10/100 LAN controller (Atheros AR8132M)

•   Giga LAN controller (Atheros AR8131M)

Mini Card

Wireless LAN (BTO)

DSSS/OFDM LAN card is equipped. Conformity with IEEE 802.11b/g, IEEE 802.11 a/g/n or IEEE 802.11a/b/g..

MODEM (Conexant x 1)

Supported by on board Modem + DAA daughter card.
Data and FAX transmission is available.
Supports ITU-TV.92.
The transfer speed of data receiving is 56kbps, of data sending is 33.6kbps and of FAX is 14.4kbps. Actual speed depends on the quality of the line used.
Connected to telephone line through RJ11 MOD

Bluetooth

Bluetooth V2.1+EDR. (BTO)

1.3 2.5-inch Hard Disk Drive

A compact, high-capacity HDD with a height of 9.5mm. Contains a 2.5-inch magnetic disk and magnetic heads.

Figure 1-3-1 shows a view of the 2.5-inch HDD and Tables 1-3-2 and 1-3-3 list the specifications.

1.4 Optical Drive (HD DVD-ROM & CD-R/RW Drive)

The DVD Super Multi drive accommodates either 12 cm (4.72-inch) or 8 cm (3.15-inch) CD/DVD-ROM, CD-R/RW, DVD±R/±RW and DVD-RAM. It is a high-performance drive that reads DVD-ROM at maximum 8-speed and CD at maximum 24-speed. Write speed of DVD±R/±RW and DVD-RAM is different depending on the drive.

The DVD Super Multi drive is shown in Figure 1-4-1. The dimensions and specifications of the DVD Super Multi drive are described in Table 1-4-2, Table 1-4-3, Table 1-4-4, Table 1-4-5.

1.5 Keyboard

The Qosmio X500 keyboard has two different kinds of placement, one is for US style and the other is for UK style.

Figure 1-5-1 is a view of the keyboard for US style

Figure 1-5-1 Keyboard for US style

Figure 1-5-2 is a view of the keyboard for UK style

Figure 1-5-2 Keyboard for UK style

See Appendix E for details of the keyboard layout

1.6 TFT Color Display

The Qosmio X500 Ganel use CCFL to control backlight.

1.6.1   LCD Module with CCFL Backlight

Figure 1-6-1 shows a view of the LCD module and Table 1-6-2 lists the specifications.

VCC_CORE	0.7~1.2	No	No	No
+VCCRTC	3.266	**Yes**	**Yes**	**Yes**

1.8 Batteries

The PC has the following two batteries.

Main battery
Real time clock (RTC) battery

Table 1-8-1 lists the specifications for these two batteries.

Table 1-8-1 Battery specifications

Battery Name		Battery Element	Output Voltage
Main Battery	12 Cells	Li-ion	10.8 v
RTC Battery	Coin type	Li-ion	3.0v

1.8.1 Main Battery

The main battery is the primary power supply for the computer when the AC adapter is not connected.

1.8.2 Battery Charging Control

Battery charging is controlled by a power supply microprocessor. The power supply microprocessor controls power supply and detects a full charge when the AC adaptor and battery are connected to the computer.

Battery Charge

When the AC adapter is connected, normal charging is used while the system is turned on and quick charge is used while the system is turned off. Refer to the following Table 1-13.

Table 1-8-2 Time required for charges of main battery

	Power ON	Power OFF
12 cell	5 ~ 10 hours	about 4 hours

Charge is stopped in the following cases.

1. The main battery is fully charged

2. The main battery is removed

3. Main battery or AC adapter voltage is abnormal

4. Charging current is abnormal

Data retaining time

When turning off the power in being charged fully, the retaining time is as following Table 1-8-3.

Table 1-8-3   Data retaining time

Retaining data Time with power off (days)
(when USB Sleep and Charge function is Disabled.)

	Sleep	Shut down
12 cell	about 3 days	about 47 days

* If USB Seep and Charge function is enabled, the computer's battery will discharge during hibernation or when the computer is turned off.

1.8.3 RTC Battery

The RTC battery provides the power supply to maintain the date, time, and other system information in memory.

Table 1-8-4 lists the Time required for charges of RTC battery and data preservation time.

Table 1-8-4 Time required for charges of RTC battery

Condition	Time
Charging time	about 24 hours
Data retaining time	about 30 days

1.9 AC Adapter

Table 1-9-1 lists the AC adapter specifications.

Table 1-9-1 AC adapter specifications

Parameter	Specification	
With Led	DELTA/ LITE-ON	
Power	120W	
Input voltage	AC 100V~240V	
Input frequency	47Hz~63Hz	
Input current	≦ 1.8A	
Output voltage	18.5V~20.0V	
Output current	6.32A	

Chapter 2

Troubleshooting Procedures

2.1 Troubleshooting

Chapter 2 describes how to determine which Field Replaceable Unit (FRU) in the computer is causing the computer to malfunction.

The FRUs covered are:

1. Power supply	6. Touch pad	11. Wireless LAN
2. System Board	7. Display	12. Sound
3. USB FDD	8. Optical Disk Drive	13, Finger Print Board
4. 2.5" HDD	9. Modem	14, Bluetooth
5. Keyboard	10. LAN	

The Test Program operations are described in Chapter 3. Detailed replacement procedures are described in Chapter 4.

> *NOTE: After replacing the system board or CPU, it is necessary to execute the subtest 01 initial configuration of the 3.3 Setting of the hardware configuration in Chapter 3. Also update with the latest BIOS*
>
> *After replacing the LCD, update with the latest EC/KBC.*

The implement for the Diagnostics procedures is referred to Chapter 3. Also, following implements are necessary:

1. Phillips screwdrivers (For replacement procedures)
2. Implements for debugging port check
   - Toshiba Free-DOS system FD

There are following two types of connections in the figure of board and module connection in and after 2.3 Power Supply Troubleshooting.

(1) Cable connection is described in the figure as line.
(2) Pin connection is described in the figure as arrow.
<e.g.> Connection of modem
2.2   Troubleshooting Flowchart

Use the flowchart in Figure 2-1-1 as a guide for determining which troubleshooting procedures to execute. Before going through the flowchart steps, verify the following:

❑ Ask customer to enter the password if a password is registered.

❑ Verify with the customer that Toshiba Windows is installed on the hard disk. Non-Windows operating systems can cause the computer to malfunction.

❑ Make sure all optional equipment is removed from the computer.

```

Figure 2-1-2 Troubleshooting flowchart (2/2)

If the diagnostics program cannot detect an error, the problem may be intermittent. The Test program should be executed several times to isolate the problem. Check the Log Utilities

function to confirm which diagnostic test detected an error(s), and then perform the appropriate troubleshooting procedures as follows:

1. If an error is detected on the system test, memory test, display test, CD-ROM/DVD-ROM test, expansion test, real timer test, sound test or Modem/LAN/Bluetooth /IEEE1394 test, perform the System Board Troubleshooting Procedures in Section 2.4.

2. If an error is detected on the floppy disk test, perform the USB FDD Troubleshooting Procedures in Section 2.5.

3. If an error is detected on the hard disk test, perform the HDD Troubleshooting Procedures in Section 2.6.

4. If an error is found on the keyboard test and pressed key display test, perform the Keyboard Troubleshooting Procedures in Section 2.7.

5. If an error is found on the touch pad test, perform the touch pad Troubleshooting Procedures in Section 2.8.

6. If an error is detected on the display test, perform the Display Troubleshooting Procedures in Section 2.9.

7. If an error is detected on the CD-ROM/DVD-ROM test, perform the Optical Disk Drive Troubleshooting Procedures in Section 2.10.

8. If an error is detected on the modem test, perform the Modem Troubleshooting Procedures in Section 2.11.

9. If an error is detected on the LAN test, perform the LAN Troubleshooting Procedures in Section 2.12.

10. If an error is detected on the wireless LAN test, perform the Wireless LAN Troubleshooting Procedures in Section 2.13.

11. If an error is detected on the sound test, perform the Sound Troubleshooting Procedures in Section 2.14.

12. If an error is detected on the fingerprint test, perform the fingerprint Troubleshooting Procedures in Section 2.15.

13. If an error is detected on the Bluetooth test, perform the Bluetooth Troubleshooting Procedures in Section 2.16.

2.3 Power Supply Troubleshooting

The power supply controller controls many functions and components. To determine if the power supply is functioning properly, start with Procedure 1 and continue with the other Procedures as instructed. The procedures described in this section are:

> Procedure 1:   Power Status Check
>
> Procedure 2:   Connection Check
>
> Procedure 3:   Charging Check
>
> Procedure 4:   Replacement Check

Procedure 1   Power Status Check

The following LED indicates the power supply status:

❑ Battery LED

❑ DC IN LED

The Power Supply control displays the power supply status with the Battery LED and the DC IN LED as listed in the tables below.

Table 2-1 Battery icon

Battery icon	Power supply status
Lights orange	Battery is charged and the AC adapter is connected. It has no relation with ON/OFF of the system power.
Lights red	Battery is fully charged and the AC adapter is connected. It has no relation with ON/OFF of the system power.
Blinks orange (even intervals)	The battery level is low while the system power is ON.
Blinks orange once (at being switched on)	The system is driven by only a battery and the battery level is low.
Doesn't light	Any condition other than those above.

Table 2-2 DC IN icon

DC IN icon	Power supply status
Lights red	DC power is being supplied from the AC adapter.
Blinks orange	Power supply malfunction[*1]
Doesn't light	Any condition other than those above.

*1 When the power supply controller detects a malfunction, the DC IN icon blinks orange.

When the icon is blinking, perform the following procedure.

1.   Remove the battery pack and the AC adapter.

2.   Re-attach the battery pack and the AC adapter.

If the icon is still blinking after the operation above, check the followings:

Check 1   If the DC IN icon blinks orange, go to Procedure 2.

Check 2   If the DC IN icon does not light, go to Procedure 3.

Check 3   If the battery icon does not light orange or green, go to Procedure 4.

NOTE: Use a supplied AC adapter.

Procedure 2 Connection Check

The wiring diagram related to the power supply is shown below:
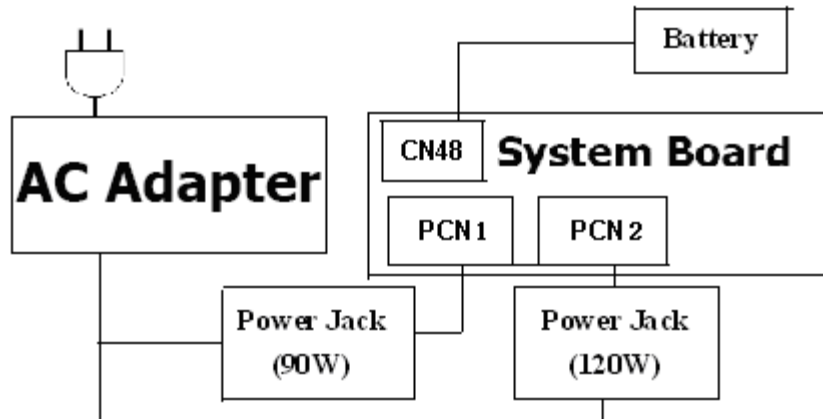

Any of the connectors may be disconnected. Perform Check 1.

Check 1 Make sure the AC adapter and the AC power cord is firmly plugged into the DC IN connector PCN3 and wall outlet. If these cables are connected firmly, go to Check 2.

Check 2 Replace the AC adapter and the AC power cord with new ones.

- If the DC IN icon does not light, go to Procedure 4.
- If the battery icon does not light, go to Check 3.

Check 3 Make sure the main battery pack is installed in the computer correctly. If the battery is properly installed and the battery icon still does not light, go to Procedure 4.

Procedure 3 Charging Check

Check if the power supply controller charges the battery pack properly. Perform the following procedures:

Check 1 Make sure the AC adapter is firmly plugged into the DC IN socket.

Check 2 Make sure the battery pack is properly installed. If it is properly installed, go to Check 3.

Check 3 The battery pack may be completely discharged. Wait a few minutes to charge the battery pack while connecting the battery pack and the AC adapter. If the battery pack is still not charged, go to Check 4.

Check 4 The battery's temperature is too high or low. Leave the battery for a while to

adjust it in the right temperature. If the battery pack is still not charged, go to Check 5.

Check 5   Replace the battery pack with a new one. If the battery pack is still not charged, go to Procedure 4.

Procedure 4   Replacement Check

The power is supplied to the system board by the AC adapter. If either the AC adapter or the system board was damaged, perform the following Checks.

To disassemble the computer, follow the steps described in Chapter 4, *Replacement Procedures*.

When AC adapter is connected;

Check 1   AC adapter may be faulty. Replace the AC adapter with a new one. If the problem still occurs, perform Check 2.

Check 2   System board may be faulty. Replace the system board with a new one.

When AC adapter is not connected ;
(When driving with battery pack)

Check 1   Battery pack may be faulty. Replace it with a new one. If the problem still occurs, perform Check 2.

Check 2   System board may be faulty. Replace it with a new one.

2.4   System Board Troubleshooting

This section describes how to determine if the system board is malfunctioning or not. Start with Procedure 1 and continue with the other procedures as instructed. The procedures described in this section are:

   Procedure 1:   Message Check

   Procedure 2:   Diagnostic Test Program Execution Check

   Procedure 3:   Replacement Check

Procedure 1   Message Check

When the power is turned on, the system performs the Power On Self Test (POST) installed in the BIOS ROM. The POST tests each IC on the system board and initializes it.

❑ If an error message is shown on the display, perform Check 1.

❑ If there is no error message, go to Procedure 2.

❑ If Free-DOS or Windows is properly loaded, go to Procedure 3.

Check 1   If one of the following error messages is displayed on the screen, press the **F2** key as the message instructs. These errors occur when the system configuration preserved in the RTC memory (CMOS type memory) is not the same as the actual configuration or when the data is lost.

If you press the **F2** key as the message instructs, the SETUP screen appears to set the system configuration. If error message (b) appears often when the power is turned on, replace the RTC battery.

Procedure 2   Diagnostic Test Program Execution Check

Execute the following tests from the Diagnostic Test Menu. These tests check the system board. Refer to Chapter 3, *Tests and Diagnostic,* for more information on how to perform these tests.

1. System test
2. Memory test
3. Keyboard test
4. Display test
5. Floppy Disk test
6. VGA test
7. VGA Memory test
8. Hard Disk test
9. CPU Temperature test
10. Main Battery test
11. BIOS test
12. CD-ROM/DVD-ROM test
13. System Status LED test
14. Wireless LAN test
15. LAN/Modem/Sound test
16. UUID test-DMI Information (Write DMI)

If an error is detected during these tests, go to Procedure 3.

Procedure 3   Replacement Check

System board may be faulty. Disassemble the computer following the steps described in Chapter 4, *Replacement Procedures* and replace system board with a new one.

2.5 USB FDD Troubleshooting

To check if the USB FDD is malfunctioning or not, follow the troubleshooting procedures below as instructed.

> Procedure 1: FDD Head Cleaning Check
>
> Procedure 2: Diagnostic Test Program Execution Check
>
> Procedure 3: Connector Check and Replacement Check

Procedure 1 FDD Head Cleaning Check

FDD head cleaning is one option available in the Diagnostic Program.

After connecting USB FDD, insert the Diagnostics Disk in the floppy disk drive. Turn on the computer and run the test. And then clean the FDD heads using the cleaning kit. If the FDD still does not function properly after cleaning, go to Procedure 2.

Detailed operation is given in Chapter 3, *Tests and Diagnostics*.

If the test program cannot be executed on the computer, go to Procedure 3.

Procedure 2   Diagnostic Test Program Execution Check

Insert the Diagnostics Disk in the USB FDD, turn on the computer and run the test. Refer to Chapter 3, *Tests and Diagnostics,* for more information about the diagnostics test procedures.

Make sure the floppy disk is formatted correctly and that the write protect tab is disabled. Floppy disk drive test error codes and their status names are listed in Table 2-7. If any other errors occur while executing the FDD diagnostics test, go to Check 1.

Table 2-7   FDD error code and status

Code	Status
01h	Bad command
02h	Address mark not found
03h	Write protected
04h	Record not found
06h	Media replaced
08h	DMA overrun error
09h	DMA boundary error
10h	CRC error
20h	FDC error
40h	Seek error
60h	FDD not drive
80h	Time out error (Not ready)
EEh	Write buffer error
FFh	Data compare error

Check 1   If the following message is displayed, disable the write protect tab on the floppy disk by sliding the write protect tab to "write enable". If any other message appears, perform Check 2.

```
Write protected
```

Check 2   Make sure the floppy disk is formatted correctly. If it is, go to Procedure 3.

Procedure 3   Connector Check and Replacement Check

USB FDD is connected to USB port on system board and US board. US board is also connected to system board by cable. The connection of cable and board may be defective. Otherwise, they may be faulty. Disassemble the computer following the steps described in Chapter 4, *Replacement Procedures* and perform the following checks.

USB FDD can be connected to the following 4 ports on system board.

Check 1   Make sure USB FDD is firmly connected to USB port. If the connection is loose, connect firmly and repeat Procedure 2. If the problem still occurs, go to Check 2.

NOTE: When checking the connection, be sure to check it with care for the followings.

1. *Cable can not be disconnected from the connector.*

2. *Cable is connected straight to the connector.*

3. *Cable is connected all the way seated in the connector.*

4. *Cable can not be broken.*

Check 2   USB FDD may be faulty. Replace it with a new one. If the problem still occurs, perform Check 3.

Check 3   Connect USB FDD to each port embedded on system board.

If it does not work properly, perform Check 4.

Check 4   System board may be faulty. Replace it with a new one following the steps in Chapter 4, *Replacement Procedures*.

2.6 2.5" HDD Troubleshooting

To check if 2.5" HDD is malfunctioning or not, follow the troubleshooting procedures below as instructed.

Procedure 1: Partition Check

Procedure 2: Message Check

Procedure 3: Format Check

Procedure 4: Diagnostic Test Program Execution Check

Procedure 5: Connector Check and Replacement Check

CAUTION: *The contents of the hard disk will be erased when the 2.5" HDD troubleshooting procedures are executed. Transfer the contents of the hard disk to other storage drive(s). For the backup, refer to the User's Manual.*

Procedure 1   Partition Check

Insert the Toshiba Free-DOS system disk and start the computer. Perform the following checks:

Check 1   Input **C:** and press **Enter**. If you cannot change to drive C, go to Check 2. If you can change to drive C, go to Procedure 2.

Check 2   Input **FDISK** and press **Enter**. Choose Display Partition Information from the FDISK menu. If drive C is listed in the Display Partition Information, go to Check 3. If drive C is not listed, return to the FDISK menu and choose the option to create a DOS partition or a logical DOS drive on drive C. If the problem still occurs, go to Procedure 2.

Check 3   If drive C is listed as active in the FDISK menu, go to Check 4. If drive C is not listed as active, return to the FDISK menu and choose the option to set the active partition for drive C. Then go to Procedure 2.

Check 4   Remove the system disk from the FDD and reboot the computer. If the problem still occurs, go to Procedure 2. Otherwise, the 2.5" HDD is operating normally.

Procedure 2   Message Check

When the power is turned on, the system performs the Initial Reliability Test (IRT) installed in the BIOS ROM. When the test detects an error, an error message is displayed on the screen.

Make sure no floppy disk is in the FDD. Turn on the computer and check the message on the screen. When an OS starts from the 2.5" HDD, go to Procedure 3. Otherwise, start with Check 1 below and perform the other checks as instructed.

Check 1   If either of the following messages appears, go to Check 3. If the following messages do not appear, perform Check 3.

```
        Insert system disk in drive
        Press any key when ready .....

                or

        Non-System disk or disk error
        Replace and press any key when ready
```

Check 2   Using the SYS command of the Free-DOS, transfer the system to the 2.5" HDD. If the system is not transferred, go to Procedure 3. Refer to the Free -DOS Manual for detailed operation.

If the following message appears on the display, the system program has been transferred to the HDD.

```
        System Transferred
```

If an error message appears on the display, perform Check 3.

Check 3   2.5" HDD(s) and the connector(s) of system board may be defective (Refer to the steps described in Chapter 4, *Replacement Procedures* for disassembling.). Insert HDD(s) to the connector(s) firmly. If it is (or they are) firmly connected, go to Procedure 3.

Procedure 3   Format Check

The computer's HDD is formatted using the Free-DOS FORMAT program or the physical format program of the test program. To format the HDD, start with Check 1 below and perform the other steps as required.

Refer to the Free-DOS Manual for the operation of Free-DOS. For the format by the test program, refer to the Chapter 3.

Check 1   Format an 2.5" HDD using Free-DOS FORMAT command. Type as **FORMAT C:/S/U**.

If 2.5" HDD can not be formatted, perform Check 2.

Check 2   Using the Free -DOS FDISK command, set the 2.5" HDD partition. If the partition is not set, go to Check 3. If it is set, format 2.5" HDD using Free-DOS FORMAT command.

Check 3   Using the Diagnostic Disk, format 2.5" HDD with a format option (physical format). If HDD is formatted, set the 2.5" HDD partition using Free-DOS FDISK command.

If you cannot format 2.5" HDD using the Tests and Diagnostic program, go to Procedure 4.

Procedure 4   Diagnostic Test Program Execution Check

The HDD test program is stored in the Diagnostics Disk. Perform all of the HDD tests in the Hard Disk Drive Test. Refer to Chapter 3, *Tests and Diagnostics,* for more information about the HDD test program.

If an error is detected during the HDD test, an error code and status will be displayed. The error codes and statuses are described in Table 2-8. If an error code is not displayed but the problem still occurs, go to Procedure 5.

Table 2-5-1 2.5" Hard disk drive error code and status

Code	Status
01	Bad Command Error
02	Bad Address Mark Error
04	Record Not Found
05	HDC Not Reset Error
07	Drive Not Initialized
09	DMA Boundary Error
0A	Bad Sector
0B	Bad Track Error
10	ECC Error
11	ECC Recover Enabled
20	HDC Error
40	Seek Error
80	Time Out Error
AA	Drive Not Ready
BB	Undefined Error
CC	Write Fault
E0	Status Error
F0	No Sense Error
??	Other Error

Procedure 5   Connector Check and Replacement Check

HDD(s) is/are connected to the connector(s) on the system board. The connection of HDD(s) and board may be defective. Otherwise, they may be faulty. Disassemble the computer following instructions in Chapter 4, *Replacement Procedures* and perform the following checks.

Check 1   Make sure HDD(s) is/are firmly connected to the connector(s) on the system board.
If any of the connections are loose, reconnect firmly and repeat Procedure 1. If the problem still occurs, go to Check 2.

Check 2   (One of) HDD(s) may be faulty. Replace it with a new one following the instructions in Chapter 4, *Replacement Procedures* and check the operation. If the problem still occurs, perform Check 3.

Check 3   System board may be faulty. Replace it with a new one following the instructions in Chapter 4, *Replacement Procedures*.

2.7 Keyboard Troubleshooting

To check if the computer's keyboard is malfunctioning or not, follow the troubleshooting procedures below as instructed.

        Procedure 1:   Diagnostic Test Program Execution Check

        Procedure 2:   Connector and Replacement Check

Procedure 1 Diagnostic Test Program Execution Check

Execute the Keyboard Test (DIAGNOSTIC TEST) and Pressed key display test in the Diagnostic Program. Refer to Chapter 3, *Tests and Diagnostics*, for more information on how to perform the test program.

If an error occurs, go to Procedure 2. If an error does not occur, keyboard is functioning properly.

Procedure 2   Connector and Replacement Check

The connection of cable and board may be defective. Otherwise, they may be faulty. Disassemble the computer following the steps described in Chapter 4, *Replacement Procedures*, and perform the following checks:

Check 1   Make sure keyboard cable is firmly connected to system board.
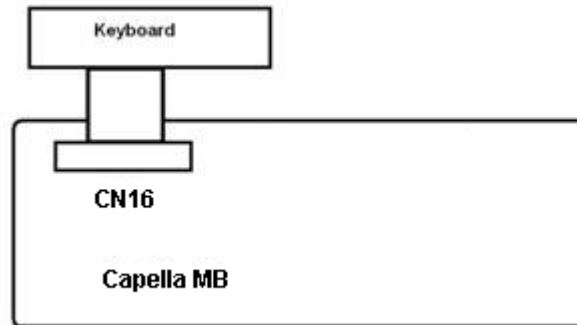

If the connection is loose, reconnect firmly and repeat Procedure 1. If the problem still occurs, go to Check 2.

Check 2   Keyboard may be faulty. Replace it with a new one following the instructions in Chapter 4, *Replacement Procedures*. If the problem still occurs, perform Check 3.

Check 3   System board may be faulty. Replace it with a new one following the instructions in Chapter 4, *Replacement Procedures*.

2.8 Touch pad Troubleshooting

To check if the computer's touch pad is malfunctioning or not, follow the troubleshooting procedures below as instructed.

Procedure 1: Diagnostic Test Program Execution Check

Procedure 2: Connector and Replacement Check

Procedure 1   Diagnostic Test Program Execution Check

Execute the Touch pad test in the Diagnostic Program. Refer to Chapter 3, *Tests and Diagnostics*, for more information on how to perform the test program.

If an error occurs, go to Procedure 2. If an error does not occur, touch pad is functioning properly.

Procedure 2   Connector and Replacement Check

The connection of cable and board may be defective. Otherwise, they may be faulty. Disassemble the computer following the steps described in Chapter 4, *Replacement Procedures*, and perform the following checks:

Check 1   Make sure the cable is firmly connected to system board.
        If the connection is loose, reconnect firmly and repeat Procedure 1. If the problem still occurs, go to Check 2.

Check 2   Touch Pad or the cable may be faulty. Replace it with a new one following the instructions in Chapter 4, *Replacement Procedures*. If the problem still occurs, perform Check 3.

Check 3   System board may be faulty. Replace it with a new one following the instructions in Chapter 4, *Replacement Procedures*

2.9 Display Troubleshooting

To check if the computer's display is malfunctioning or not, follow the troubleshooting procedures below as instructed.

           Procedure 1:   External Monitor Check

           Procedure 2:   Diagnostic Test Program Execution Check

           Procedure 3:   Connector and Cable Check

           Procedure 4:   Replacement Check

Procedure 1   External Monitor Check

Connect an external monitor to the computer's external monitor port, and then boot the computer. The computer automatically detects the external monitor
when "Power on Display" setting is "Auto-Selected" (Default) in BIOS Setup Menu.
If this setting is "System LCD only", external monitor cannot be displayed.

If the external monitor works correctly, the internal LCD may be faulty. Go to Procedure 3.

If the external monitor appears to have the same problem as the internal monitor, system board may be faulty. Go to Procedure 2.

Procedure 2   Diagnostic Test Program Execution Check

The Display Test program is stored in Diagnostics disk. This program checks the display controller on system board. Insert the Diagnostics disk in the USB FDD, turn on the computer and run the test. Refer to Chapter 3, *Tests and Diagnostics* for details. If an error is detected, go to Procedure 3.

Procedure 3   Connector and Cable Check

LCD Module is connected to system board by an LCD/FL cable. FL inverter board is also connected to system board by an LCD/FL cable. And, fluorescent lamp is connected to FL inverter board by HV cable. Their cables may be disconnected from system board or FL inverter board. Disassemble the computer following the steps described in Chapter 4, *Replacement Procedures*.

If the connection is loose, reconnect firmly and restart the computer. If the problem still occurs, go to Procedure 4.
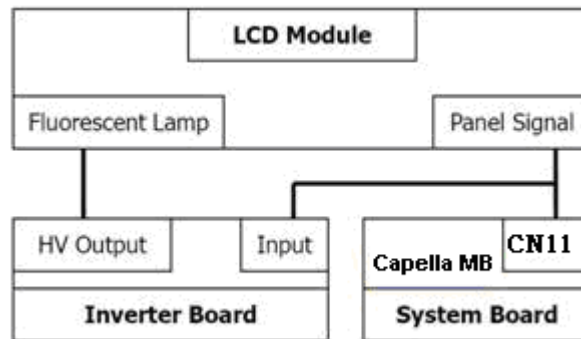

Procedure 4   Replacement Check

Fluorescent lamp, FL inverter, LCD module, HV cable and LCD/FL cable are connected to display circuits. Any of these components may be faulty. Refer to Chapter 4, *Replacement Procedures,* for instructions on how to disassemble the computer and then perform the following checks:

> If LED backlight does not light, perform Check 1.
>
> If characters or graphics on the internal display are not displayed clearly, perform Check 3.
>
> If some screen functions do not operate properly, perform Check 3.
>
> If LED backlight remains lit when the display is closed, perform Check 4.

Check 1   LCD/FL cable may be faulty. Replace FL/LCD cable with a new one following the instructions in Chapter 4, *Replacement Procedure* and test the display again. If the problem still occurs, perform Check 2.

Check2   FL inverter may be faulty. Replace FL inverter with a new one following the instructions in Chapter 4, *Replacement Procedure* and test the display again. If the problem still occurs, perform Check 3.

Check 3   LCD module may be faulty. Replace LCD module with a new one following the instructions in Chapter 4, *Replacement Procedure* and test the display again. If the problem still occurs, perform Check 4.

Check 4   System board may be faulty. Replace it with a new one following the instructions in Chapter 4, *Replacement Procedure*.

2.10 Optical Disk Drive Troubleshooting

To check if optical disk drive is malfunctioning or not, follow the troubleshooting procedures below as instructed.

Procedure 1: Diagnostic Test Program Execution Check

Procedure 2: Connector Check and Replacement Check

### Procedure 1   Diagnostic Test Program Execution Check

Execute the CD-ROM/DVD-ROM Test in the Diagnostic Program. Refer to Chapter 3, *Tests and Diagnostics* for more information on how to perform the test program.

Prepare the tools before the test.

If any error is detected by the test, go to Procedure 2.

Procedure 2   Connector Check and Replacement Check

The connection of optical disk drive and system board may be defective. Otherwise, they may be faulty. Disassemble the computer following the steps described in Chapter 4 and perform the following checks:

Check 1   Make sure optical disk drive is firmly connected to the connector on system board.
If the connection is loose, reconnect it firmly and return to Procedure 2. If the problem still occurs, perform Check 2.

Check 2   Optical disk drive may be faulty. Replace it with a new one following the steps in Chapter 4. If the problem still occurs, perform Check 3.

Check 3   System board may be faulty. Replace it with new one following the instructions in Chapter 4.

2.11 Modem Troubleshooting

To check if modem is malfunctioning or not, follow the troubleshooting procedures below as instructed.

Procedure 1: Diagnostic Test Program Execution Check

Procedure 2: Connector Check and Replacement Check

### Procedure 1   Diagnostic Test Program Execution Check

Execute Modem test in the LAN/Modem/Bluetooth/IEEE1394 test program. Refer to Chapter 3, *Tests and Diagnostics* for more information on how to perform the test program.

If any error is detected, perform Procedure 2.

Procedure 2   Connector Check and Replacement Check

MDC (Modem Daughter Card) is used as the modem for this computer. MDC is connected to system board by connector. And also, MDC is connected to system and LAN board by modem cable. If modem malfunctions, the connection of cable, board and module may be defective. Otherwise, they may be faulty.

Disassemble the computer following the steps described in Chapter 4 and perform the following checks:

Check 1   Make sure the following connections are firmly connected.
If any connector is disconnected, connect it firmly and return to Procedure 1. If the problem still occurs, perform Check 2.

Check 2   Modem cable may be faulty. Replace it with a new one. If the problem still occurs, perform Check 3.

Check 3   MDC may be faulty. Replace it with a new one following the steps in Chapter 4. If the problem still occurs, perform Check 4.

Check 4   Cable between MDC and system board may be faulty. Replace it with a new one following the instructions in Chapter 4. If the problem still occurs, perform Check 5.

Check 5   System board may be faulty. Replace it with a new one following the instruction in Chapter 4.

2.12 LAN Troubleshooting

To check if the computer's LAN is malfunctioning or not, follow the troubleshooting procedures below as instructed.

Procedure 1:   Diagnostic Test Program Execution Check

Procedure 2:   Connector Check and Replacement Check

Procedure 1   Diagnostic Test Program Execution Check

Execute LAN test in the LAN/Modem test program. Refer to Chapter 3, *Tests and Diagnostics* for more information on how to perform the test program.

If any error is detected by the test, go to Procedure 2.

Procedure 2   Connector Check and Replacement Check

The LAN function is embedded on system board. If LAN malfunctions, its connection is defective or LAN cable and system board may be faulty.

Check 1   Make sure LAN cable is firmly connected to the connector CN1. If the problem still occurs, perform Check 2.
Check 2   LAN cable may be faulty. Replace it with a new one. If the problem still occurs, perform Check 3.

Check 3   System board may be faulty. Replace it with a new one following the instruction in Chapter 4.

2.13 Wireless LAN Troubleshooting

To check if the computer's Wireless LAN is malfunctioning or not, follow the troubleshooting procedures below as instructed.

Procedure 1: Transmitting-Receiving Check

Procedure 2: Antennas' Connection Check

Procedure 3: Replacement Check

Procedure 1 Transmitting-Receiving Check

Before starting the test, make sure the wireless communication is Enabled in BIOS setup

Check 1 Execute Wireless LAN test program to check the transmitting-receiving function of wireless LAN. You will need a second computer that can communicate by wireless LAN. Perform the test following the instructions described in Chapter 3.

If the computer passes the test, the function is correctly working. If the computer does not pass the test, perform Procedure 2.

Procedure 2   Antennas' Connection Check

The wireless LAN function-wiring diagram is shown below:
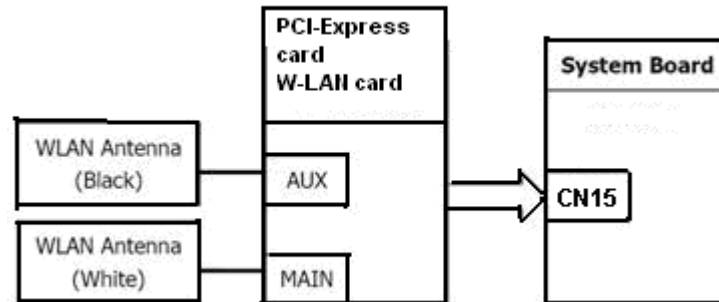

Any of the connections may be defective. Disassemble the computer following the steps described in Chapter 4, *Replacement Procedures*, and perform the following checks:

Check 1   Make sure the wireless communication is Enabled in BIOS setup

 If the Wireless communication is "Disabled", change it to "Enabled". If the problem still occurs, perform Check 2.

Check 2   Make sure wireless LAN card is firmly connected to the CN15 on system board. If the connector is defective, connect it firmly and perform Procedure 1. If the problem still occurs, perform Check 3.

Check 3   Make sure that wireless LAN antenna cables (black and white) are firmly connected to the connectors on Wireless LAN card. If wireless LAN antenna cables are not connected properly, connect them firmly and perform Procedure 1. If the problem still occurs, go to the procedure 3.

Procedure 3   Replacement Check

Wireless LAN card, wireless LAN antenna or system board may be faulty. Refer to Chapter 4, *Replacement Procedures,* for instructions on how to disassemble the computer and then perform the following checks:

Check 1   Wireless LAN antenna may be faulty. Replace it with a new one following the instructions in Chapter 4, *Replacement Procedures*. If the problem still occurs, perform Check 2.

Check 2   Wireless LAN card may be faulty. Replace it with a new one following the instructions in Chapter 4, *Replacement Procedures*. If the problem still occurs, perform Check 3.

Check3   System board may be faulty. Replace it with a new one following the instructions in Chapter 4, *Replacement Procedures*.

2.14 Sound Troubleshooting

To check if the sound function is malfunctioning or not, follow the troubleshooting procedures below as instructed.

> Procedure 1:   Connector Check
>
> Procedure 2:   Replacement Check

Procedure 1   Connector Check

The connection of sound system is shown in the following figure.
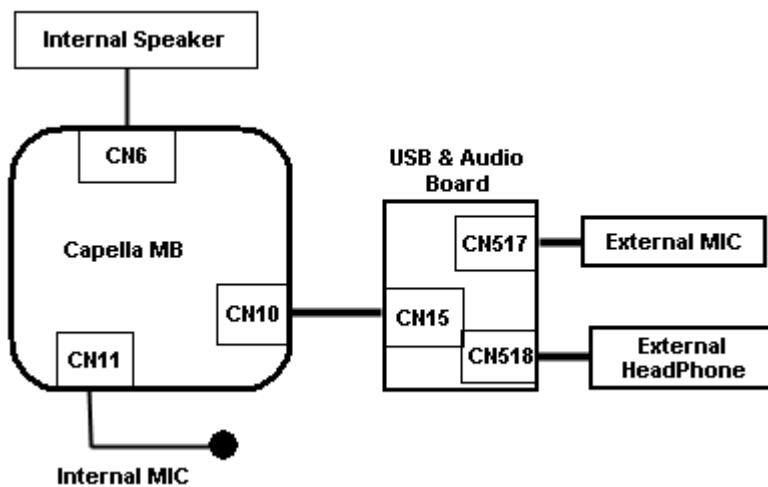

As the connection may be defective, disassemble the PC and check each connection.

If the problem still occurs, go to Procedure 2.

Procedure 2   Replacement Check

❑ If External microphone/Headphone does not work properly, perform check 1.

❑ If Internal microphone /Speaker does not work properly, perform check 2.

❑ If HP out does not work properly, perform check 3.

❑ If Volume control does not work properly, perform check 4.

Check 1   External microphone/Headphone may be faulty. Replace it with a new one following the steps in Chapter 4. If the problem still occurs, perform Check 5.

Check 2   Internal microphone /Speaker may be faulty. Replace it with a new one following the steps in Chapter 4. If the problem still occurs, perform Check 5.

Check 3   HP out may be faulty. Replace it with a new one following the steps in Chapter 4. If the problem still occurs, perform Check 5.

Check 4   Volume control may be faulty. Replace it with a new one following the steps in Chapter 4. If the problem still occurs, perform Check 6.

Check 5   Flat cable between AD board/Speaker and system board may be faulty. Replace it with new cable following the instructions in Chapter 4. If the problem still occurs, perform Check 6.

Check 6   Audio board/System board may be faulty. Replace it with a new one following the instructions in Chapter 4.

2.15 Fingerprint Troubleshooting

To check if the computer's Fingerprint is malfunctioning or not, follow the troubleshooting procedures below as instructed.

Procedure 1: Connector Check and Replacement Check

Procedure 1   Diagnostic Test Program Execution Check

Execute Fingerprint test in the test program. Refer to Chapter 3, *Tests and Diagnostics* for more information on how to perform the test program.

If any error is detected, perform Procedure 2.

Procedure 2   Connector Check and Replacement Check

The Fingerprint function is embedded on system board. If Fingerprint malfunctions, its connection is defective or Fingerprint cable and system board may be faulty.

Check 1   Make sure Fingerprint cable is firmly connected to the connector. If the problem still occurs, perform Check 2.
Check 2   Fingerprint cable may be faulty. Replace it with a new one. If the problem still occurs, perform Check4.

Check 3   Fingerprint may be faulty. Replace it with a new one following the steps in Chapter 4. If the problem still occurs, perform Check 4.

Check 4   System board may be faulty. Replace it with a new one following the instruction in Chapter 4.

2.16 Bluetooth Troubleshooting

To check if the computer's Bluetooth is malfunctioning or not, follow the troubleshooting procedure below as instructed.

Procedure 1:   Connector Check and Replacement Check

Procedure 1   Connector Check and Replacement Check

The Bluetooth module is connected to system board. If Bluetooth malfunctions, its

connection is defective or Bluetooth cable and system board may be faulty.

Check 1   Make sure Bluetooth cable is firmly connected to the connector CN27. If the
problem still occurs, perform Check 2.
Check 2   Bluetooth cable may be faulty. Replace it with a new one. If the problem s till
occurs, perform Check 3.

Check 3   Bluetooth may be faulty. Replace it with a new one following the steps in Chapter
4. If the problem still occurs, perform Check 4.

Check 4   System board may be faulty. Replace it with a new one following the instruction in
Chapter 4.

Chapter 3

Diagnostic Programs

Chapter 3   Contents

3.1 Tests and Diagnostics Software Overview

This chapter explains how to use the Tests and Diagnostics Software for the Satellite P500 and Satellite Pro P500 computer systems.

> *NOTES: Before starting the Tests and Diagnostics software:*
>
> 1. *Check all cables for loose connections.*
> 2. *Exit any application and close Windows.*

The Diagnostics Menu consists of the following options:
- ❑ Diagnostic Test
- ❑ Running Test
- ❑ DMI Information
- ❑ Log Utilities
- ❑ System Configuration
- ❑ Option

The Diagnostic Test Menu consists of the following functional tests:
- ❑ System Test
- ❑ Memory Test
- ❑ Keyboard Test
- ❑ Display Test
- ❑ Floppy Disk Test
- ❑ Hard Disk Test
- ❑ Real Time Clock Test
- ❑ Cache Memory Test
- ❑ High Resolution Display Test
- ❑ Multimedia Test
- ❑ Memory2 Test
- ❑ FDD & HDD Error Retry Count Set

The following equipment is required to perform some of the diagnostic test programs:

- ❑ The Diagnostics Disk (all tests)
- ❑ A formatted working disk for the floppy disk drive test (all tests)
- ❑ A CD test media (Toshiba Backup CD ROM for the CD-ROM test)

The following sections detail the tests contained within the Diagnostic Test Menu. Refer to Sections 3.18, 3.19, 3.20 and, 3.21 for detailed information on the remaining functions of the Tests and Diagnostics software.

3.2 Executing the Diagnostic Test

DOS is required to run the Diagnostics Program. To start the programs follow these steps:

1. Create a DOS bootable disk and copy all the files from the Tests and Diagnostics software to the disk.

2. Insert the boot disk into the computer's floppy disk drive and turn on the computer.

NOTES: If error message display "Sorry. This Model Type Not Match This Machine":

Please Check :

1. You test disk is match this model , ex. disk is 14" but machine is 13" .

2. The M/B EEPROM project type is math your test disk , if not , please use WDMI3.EXE to modify with right LCD size .

The following screen displays:

```
TOSHIBA Satellite(Pro) P500 Diagnostics        ↑ ↓ → ←:Select item
Version v1.10                                   ESC   :Escape

    [ DIAGNOSTICS MENU ]

01.DIAGNOSTIC TEST
02.RUNNING TEST
03.DMI INFORMATION
04.LOG UTILITIES
05.SYSTEM CONFIGURATION
06.OPTION
99.EXIT
```
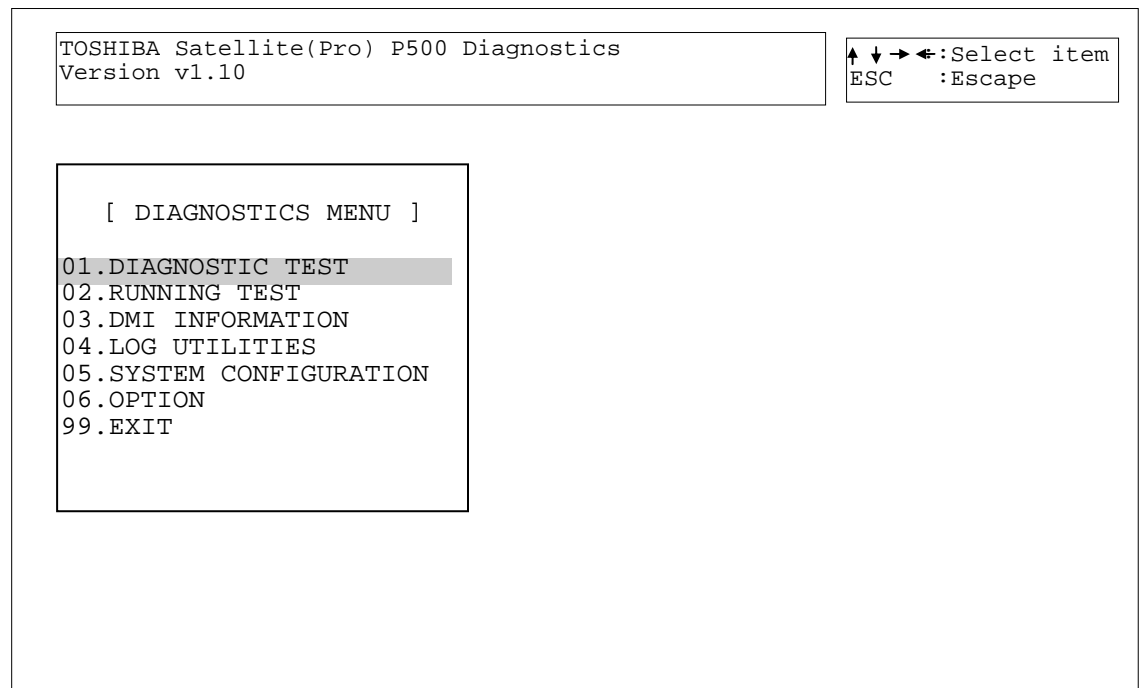

3. To select the Diagnostic Test from the Diagnostics Menu use the arrow keys to set the highlight bar to **01** and press **Enter**.

The following menu displays:

```
TOSHIBA Satellite(Pro) P500 Diagnostics        ↑↓→←:Select item
Version V1.10                                   ESC  :Escape

   [ DIAGNOSTICS MENU ]

 01. DIAGNOSTIC TEST

                         [ DIAGNOSTIC TEST MENU ]

 01. SYSTEM TEST            08. CACHE MEMORY TEST
 02. MEMORY TEST            09. HIGH RESOLUTION DISPLAY TEST
 03. KEYBOARD TEST          10. MULTIMEDIA TEST
 04. DISPLAY TEST           11. MEMORY2 TEST
 05. FLOPPY DISK TEST       88. FDD&HDD ERROR RETRY COUNT SET
 06. HARD DISK TEST         99. EXIT TO DIAGNOSTICS MENU
 07. REAL TIME CLOCK TEST
```

Refer to Sections 3.4 through 3.14 for detailed descriptions of Diagnostics Tests 1 through 11. Item 88 sets the floppy disk drive and hard disk drive error retry count. Item 99 exits the submenu of the Diagnostic Test and returns to the Diagnostics Menu.

4. Select the subtest you want to execute and press **Enter**. The following menu displays:

```
TOSHIBA Satellite(Pro) P500 Diagnostics          ↑↓→←:Select item
Version V1.10                                     ESC   :Escape

    [ DIAGNOSTICS MENU ]
                                                  [ SYSTEM TEST ]
 01. DIAGNOSTIC TEST
                                              01. FAN ON/OFF
                                   [ DIAGNOS  01. FAN ON/OFF
                                              03. CPU Temperature
 01. SYSTEM TEST                              99. Exit to DIAGNOSTIC TEST MENU
 02. MEMORY TEST                08
 03. KEYBOARD TEST              09
 04. DISPLAY TEST               10
 05. FLOPPY DISK TEST           11. MEMRY2 TEST
 06. HARD DISK TEST             88. FDD&HDD ERROR RETRY COUNT SET
 07. REAL TIME CLOCK TEST       99. EXIT TO DIAGNOSTICS MENU
```

5. Select the desired test from the subtest menu and press **Enter**. The following Test Parameter menu displays:

```
TOSHIBA Satellite(Pro) P500 Diagnostics          ↑↓→←:Select item
Version V1.10                                     ESC   :Escape

    [ DIAG      [ TEST PARAMETER ]     YSTEM TEST ]

 01. DIAG                          FF
             01. Go To Test           Test
             02. Test Loop   :  YES   erature
             03. Error Stop  :  NO    DIAGNOSTIC TEST MENU

 01. SYS                          TIME CLOCK TEST
 02. MEMORY TEST                10. NPX TEST
 03. KEYBOARD TEST              11. HIGH RESOLUTION DISPLAY TEST
 04. DISPLAY TEST               12. MULTIMEDIA TEST
 05. FLOPPY DISK TEST           13. USB TEST
 06. HARD DISK TEST             14. MEMORY2 TEST
 07. REAL TIME CLOCK TEST       88. FDD&HDD ERROR RETRY COUNT SET
                                99. EXIT TO DIAGNOSTICS MENU
```

Use the arrow keys to highlight the desired option and press **Enter**.

NOTES: The Item2 and 3 of Test Parameter are not used by some tests.

Go To Test
Move the highlight bar to *Go To Test* and press **Enter** to start executing the test.

Test Loop
Select **NO** to return the screen to the subtest menu after the test is complete.
Select **YES** to set the test to run continuously until it is halted by the user.

Error Stop
Select **NO** to keep the test running even if an error is found.
Select **YES** to stop the test program when an error is found and display the HALT OPERATION screen as shown below:

```
[[ HALT OPERATION ]]
  1: Test end
  2: Continue
  3: Retry
```

These three selections have the following functions:
   1: Terminates the test program and exits to the subtest menu.
   2: Continues the test from the error.
   3: Restarts the test from the beginning.
Use the arrow keys to move the cursor to the desired option and press **Enter**.
Table 3-1 in Section 3.3 lists the function of each test on the subtest menu. Table 3-2 in Section 3.15 lists the error codes and error status for each error.

3.3   Subtest names

Table 3-1 lists the subtest names for each test program in the Diagnostic
Test menu.

Table 3-1 Subtest Names(1/3)

No.	Test Name	No.	Subtest Name
01	SYSTEM TEST	01	FAN ON/OFF check
		02	Battery TEST
		03	CPU Temperature
		04	3D HDD Protection Test (90d)
02	MEMORY TEST	01	Conventional Memory
		02	Protected Mode
		03	Protected Mode (32MB-MAX)
		04	RAM Refresh
		05	Stress Test
03	KEYBOARD TEST	01	Pressed Key Display [109 KBD]
		02	Pressed Key Display [105 KBD]
		03	Pressed Key Display [104 KBD]
		04	Hot Key Display [9 KBD]
		05	Hot Key Display [1 KBD]
		06	PS/2 Mouse (Pointing 2Button)
04	DISPLAY TEST	01	Character Attributes
		02	Character Set
		03	80* 25 Character Display
		04	320* 200 Graphics Display
		05	640* 200 Graphics Display
		06	640* 480 Graphics Display
		07	Display Page
		08	"H" Pattern Display
		09	Video DAC Register W/R/C
		10	Color Graphics Display
		11	Color Attributes Display
		12	Color Tiling

Table 3-1 Subtest Names(2/3)

No.	Test Name	No.	Subtest Name
05	FLOPPY DISK TEST	01	Sequential Read
		02	Sequential W/R/C
		03	Random Address/Data
		04	Write Specified Address
		05	Read Specified Address
06	HARD DISK TEST	01	Sequential Read
		02	Address Uniqueness
		03	Random Address Data
		04	Cross Talk and Peek Shift
		05	Write Specified Address
		06	Read Specified Address
		07	Sequential Write
		08	W-R-C Specified Address
07	REAL TIME CLOCK TEST	01	Real Time Test
		02	Backup Memory Test
		03	Real Time Carry Test
08	CACHE MEMORY TEST	01	Constant Data Test
		02	Address Pattern Test
		03	Increment/Decrement Test
		04	Bit Shift Pattern Test
		05	*Write Disturb Test
		06	Checker Board Test
		07	Marching Test
		08	Working Data Test
09	HIGH RESOLUTION DISPLAY TEST	01	VRAM W/R/C Test
		02	640* 480 Mode Display
		03	800* 600 Mode Display
		04	1024* 768 Mode Display
		05	"H" Pattern Display
		06	Focus Test ("E" Pattern)

Table 3-1 Subtest Names(3/3)

No.	Test Name	No.	Subtest Name
10	MULTIMEDIA TEST	01	Sequential Read Test
		02	Random Read Test
		03	Read Specified Address Test
		04	1 point W/R/C Test
11	MEMORY2	01	All one/zero Test
		02	Walking 1/Walking 0 Test(Left)
		03	Walking 1/Walking 0 Test(Right)
		04	Walking 1/Walking 0 Test(Left /Right)

*This test cannot support.

3.4   System Test

To execute the System Test select **01** from the Diagnostic Test Menu, press **Enter** and follow the directions on the screen. The System Test contains three subtests. Move the highlight bar to the subtest you want to execute and press **Enter**.

Subtest 01   FAN ON/OFF Checking

Select 1,2,3 to control FAN on/off , 1=Fan on , 2=Fan off , 3=Exit .

[BOIFAN2.EXE] Program Version : 1.0
 1: Fan On 2: Fan Off 3: Exit
Fan1 Status On Fan1RPM : 5000 or   Fan1 Status OFF Fan1RPM : 0
Fan2 Status On Fan2RPM : 2500 or   Fan2 Status OFF Fan2RPM : 0

Subtest 02   Battery Test

This will display battery information for check , press [ESC] to exit .

```
[BOIPCU.EXE] Program Version : 1.0 03-27-2007
voltage                : 12522 mV      Remaining capacity alarm    : 400 mAh

Subtest 03   CPU Temperature

      This will display CPU Temperature for check , press [ESC] to exit .

      [CPU_TEMP.EXE] Program Version : 1.3 03-09-2009
        CPU Temperature : XX
        GPU Temperature : XX
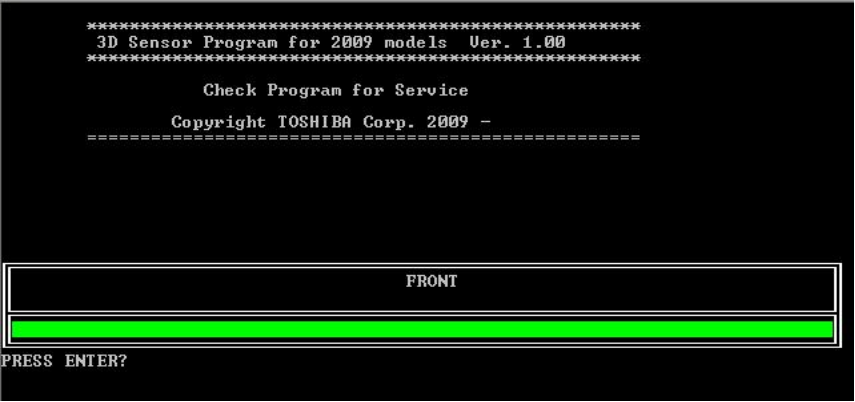

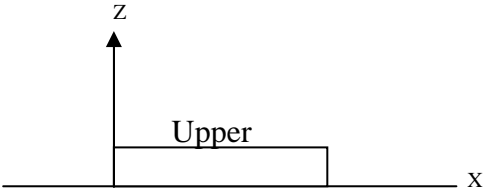

NOTES: If no external Graphics , GPU not report temperature .
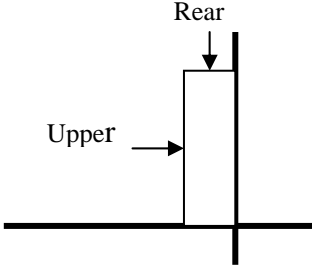

Subtest 04   3D HDD Protection Test (90d)
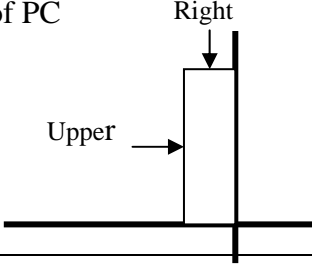

1. For Field inspection T&D.
   This program judges by sampling five kinds of data shown below.
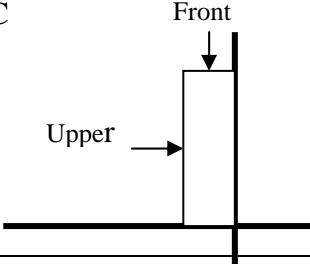

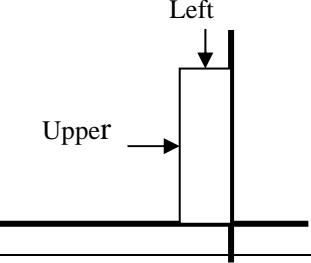

No	Item	Contents
1	Access platform.	An access platform is leveling.
2	Test Fixture	The Fixture which fixes PC by 90 degree inclination is used.
		Vibration/shock doesn't take a PCB at the time of T&D inspection.

3	Test1	The display of a test program and the set method of PC are shown below. Display of a Test Program The portion which PC and Test-Fixture contact is green. Set method of PC
		Judgment If all data is less than ranges, it will be OK.

4	Test2	The display of a test program and the set method of PC are shown below. Display of a Test Program Set method of PC
		Judgment If all data is less than ranges, it will be OK.

5	Test3	The display of a test program and the set method of PC are shown below.
		Display of a Test Program
		PRESS ENTER?
		Set method of PC
		Judgment If all data is less than ranges, it will be OK.

6	Test4	The display of a test program and the set method of PC are shown below.
		Display of a Test Program
		Set method of PC
		Judgment
		If all data is less than ranges, it will be OK.

7	Test5	The display of a test program and the set method of PC are shown below. Display of a Test Program Set method of PC
		Judgment If all data is less than ranges, it will be OK.
8	Inspection	Judgment If all data is less than ranges, it will be OK.
9	Setting Calibration data	When an inspection result is O.K., calibration at HPC.

2. Test Result
   A test result is displayed when a test is completed. A display of result is O.K. or NG.
   And an error flag is returned at the end of a program.
   OK is 0.
   NG is 1.

3.5   Memory Test

To execute the Memory Test select **02** from the Diagnostic Test Menu, press **Enter** and follow the directions on the screen. The Memory Test contains five subtests that test the computer's memory. Move the highlight bar to the subtest you want to execute and press **Enter**.

---

*NOTE: If **NO** is selected for Test Loop on the Test Parameter menu, the Test Status screen displays while the test is executing. When the test is complete the Memory Test menu displays.*

*If **YES** is selected for Test Loop on the Test Parameter menu, the Test Status screen displays while the test is executing. Press **Ctrl** + **break** to return to the Memory Test menu.*

Subtest 01   Conventional Memory

This subtest first writes test data patterns to conventional memory (0 to 640 KB), then reads the new data and compares the result with the original data patterns.

If a compare error occurs, the write data, read data, and test address display on the screen. Addresses are displayed in 4KB increments during the test.

Test Process:

1. Byte Enable Test
    One bit write/ 8 bit read" is executed and the new data is compared with the original data.
    Test data = CCAA5533H, 80000000H

2. Byte Enable Test
    "One bit write/16 bit read" is executed and the new data is compared with the original data.
    Test data = CCAA5533H, 80000000H

3. Data bus test
    "One bit write/16 bit read" is executed and the new data is compared with the original data.
    Test data = 1H, 2H, 4H, 8H, 10H, through 80000000H.

4. Fixed data test
    "16 bit write/ 16 bit read" is executed and the new data is compared to the original data.
    Test data = FFFFFFFFH, 00000000H, 80018001H

---

5. Address pattern test
    "16 bit write and 16 bit read" of address pattern data is executed and
    the new data is compared with the original data.
    Test data = 0000H, 0004H, 0008H, 000CH,...8000H, 8004H, through
    FFECH

Subtest 02   Protected Mode

This subtest first writes data patterns and address data from 1 to 32 MB, then
reads the new data and compares the result with the original data patterns.
Addresses are displayed in 64KB increments during the test.

.   **Test Process:**

1. Byte Enable Test
    One bit write/ 8 bit read" is executed and the new data is compared
    with the original data.
    Test data = CCAA5533H, 80000000H

2. Byte Enable Test
    "One bit write/16 bit read" is executed and the new data is compared
    with the original data.
    Test data = CCAA5533H, 80000000H

3. Data bus test
    "One bit write/16 bit read" is executed and the new data is compared
    with the original data.
    Test data = 1H, 2H, 4H, 8H, 10H, through 80000000H.

4. Fixed data test
    "16 bit write/ 16 bit read" is executed and the new data is compared
    to the original data.
    Test data = FFFFFFFFH, 00000000H, 80018001H

5. Address pattern test
    "16 bit write and 16 bit read" of address pattern data is executed and
    the new data is compared with the original data.
    Test data = 0000H, 0004H, 0008H, 000CH,...8000H, 8004H, through
    FFECH

Subtest 03   Protected Mode [32MB - MAX]

This subtest first writes data patterns and address data from 32MB to the
maximum installed memory, reads the new data, and then compares the result

with the original data patterns. Addresses are displayed in 64KB increments during the test.

Test Process:

1. Byte Enable Test
   One bit write/ 8 bit read" is executed and the new data is compared with the original data.
   Test data = CCAA5533H, 80000000H

2. Byte Enable Test
   "One bit write/16 bit read" is executed and the new data is compared with the original data.
   Test data = CCAA5533H, 80000000H

3. Data bus test
   "One bit write/16 bit read" is executed and the new data is compared with the original data.
   Test data = 1H, 2H, 4H, 8H, 10H, through 80000000H.

4. Fixed data test
   "16 bit write/ 16 bit read" is executed and the new data is compared to the original data.
   Test data = FFFFFFFFH, 00000000H, 80018001H

5. Address pattern test
   "16 bit write and 16 bit read" of address pattern data is executed and the new data is compared with the original data.
   Test data = 0000H, 0004H, 0008H, 000CH,...8000H, 8004H, through FFECH

Subtest 04   RAM Refresh

This subtest writes a data pattern (CCAA5533H) in 4KB from 0 to the maximum installed memory, then waits for a memory refresh cycle (16 ms or more), reads the new data, and compares the result with the original data pattern.

Test Process:

1. Checks the memory size to determine the maximum size of installed memory.

2. Tests memory addresses 0 to the maximum installed.

3. Writes, reads, and compares test data after a memory refresh cycle (16ms or more).

NOTE: There may be a short delay between write and read operations, depending on the memory size.

Subtest 05   Stress Test

This subtest writes the following 16KB data patterns to the Write/Read Buffer in conventional memory.

```
data:    FFFFFFFFFFFFFFFF0000000000000000
         5555555555555555AAAAAAAAAAAAAAAA
         CCCCCCCCCCCCCCCC3333333333333333
         0000000000000000FFFFFFFFFFFFFFFF
         AAAAAAAAAAAAAAAA5555555555555555
         3333333333333333CCCCCCCCCCCCCCCC
         FFFFFFFFFFFFFFFF0000000000000000
         0000000000000000FFFFFFFFFFFFFFFF
         5555555555555555AAAAAAAAAAAAAAAA
         AAAAAAAAAAAAAAAA5555555555555555
         CCCCCCCCCCCCCCCC3333333333333333
         3333333333333333CCCCCCCCCCCCCCCC
```

3.6   Keyboard Test

To execute the Keyboard Test select **03** from the Diagnostic Test Menu, press **Enter** and follow the directions on the screen. The Keyboard Test contains five subtests that test the computer's keyboard and mouse actions. Move the highlight bar to the subtest you want to execute and press **Enter**.

NOTE: *The Test Loop and Error Stop parameters are not enabled for the Keyboard test.*

Subtest 01   Pressed Key Display [109 Keyboard]

When you execute this subtest, the keyboard layout is drawn on the display. When any key is pressed, the corresponding key on the screen changes from light to dark. Holding a key down enables the auto-repeat function which causes the key's display character to blink.

```
                    [[[ Press Key Display ]]]

                     Layout of a keyboard (109 keys)

```
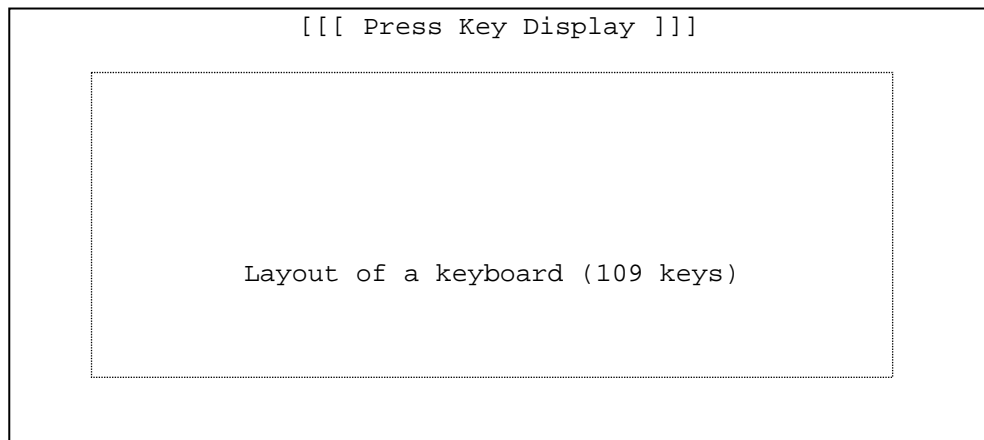

Subtest 02   Pressed Key Display [105 Keyboard]

This subtest is used for the 105 keyboard and functions the same as Subtest 1.

Subtest 03   Pressed Key Display [104 Keyboard]

This subtest is used for the 104 keyboard and functions the same as Subtest 1.

Subtest 04   Hot Key Display [9 Key]

           This subtest is used for the 9 hot key and functions the same as Subtest 1.

           ECO MUTE MUSIC PLAY BACK NEXT VOL- VOL+ WLAN

Subtest 05   Hot Key Display [1 Key]

           This subtest is used for the 1 hot key and functions the same as Subtest 1.

                              WLAN

Subtest 06   PS/2 Mouse (Pointing)

           This subtest checks the function of mouse as shown below.

                    A) Pointing device (mouse)
                    B) Mouse buttons

           Please move cursor to upper left and press left button , screen will display <PRESS> in left rectangle , move cursor to lower right and press right button , screen will display <PRESS> in right rectangle , the program exit .

           If left and right button short , screen will display <Left and Right Button maybe short > , the program exit .

3.7   Display Test

To execute the Display Test select **04** from the Diagnostic Test Menu, press **Enter** and follow the directions displayed on the screen. The Display Test contains twelve subtests that test the display in various modes. Move the highlight bar to the subtest you want to execute and press **Enter**.

Subtest 01   Character Attributes

This subtest displays character attributes and color attributes. The character attributes are: normal, intensified, reverse, and blinking. The color attributes are: blue, red, magenta, cyan, yellow, and white. These seven colors each display a background color, foreground color and high resolution color. The screen below displays when this subtest is executed.

```
CHARACTER ATTRIBUTES

  NEXT LINE SHOWS NORMAL DISPLAY
        NNNNNNNNNNNNNNNNNNNNNNNNNNNNNNNNNN

 NEXT LINE SHOWS INTENSIFIED DISPLAY
        IIIIIIIIIIIIIIIIIIIIIIIIIIIIIIIII

 NEXT LINE SHOWS REVERSE DISPLAY
        RRRRRRRRRRRRRRRRRRRRRRRRRRRRRRRRR

 NEXT  RRRRRRRRRRRRRRRRRRRRRRRRRRRRRRRRRR
        BBBBBBBBBBBBBBBBBBBBBBBBBBBBBBBBB

                                  BLUE

                                  RED

                                   MAGENTA

                                  GREEN

                                  CYAN

                                  YELLOW

                                  WHITE

   Press  [ Enter ] KEY
```

To exit this subtest and return to the Display Test menu:

Press **Enter** if **NO** was selected for *Test Loop* on the Test Parameter Menu.
Press **Ctrl** + **break** if **YES** was selected for *Test Loop* on the Test Parameter
Menu.

Subtest 02   Character Set

This subtest displays the character codes 00H - FFH, using Mode 01H
(40*25). The screen below displays when this subtest is executed.

```
 CHARACTER SET IN 40*25
```

```
 Press  [Enter] Key
```

To exit this subtest and return to the Display Test menu:

Press **Enter** if **NO** was selected for *Test Loop* on the Test Parameter Menu.
Press **Ctrl** + **break** if **YES** was selected for *Test Loop* on the Test Parameter
Menu.

Subtest 03   80 * 25 Character Display

This subtest uses 80*25 video resolution to display character codes 20H - 7EH using Mode 03H (80*25). The data displayed is shifted 1 byte to the left for each line as shown below.

```
 80*25 CHARACTER DISPLAY
 012345678901234567890123456789012345678901234567890123456789012345678901234567890123456789

    BLUE                                       L   BLUE
    GREEN                                      L   GREEN
    CYAN                                       L   CYAN
    RED                                        L   RED
    MAGENTA                                    L   MAGENTA
    BROWN                                      YELLOW
    WHITE                                      I   WHITE
Press [Enter] KEY
```

Press **ENTER** to display 64 gradations of red, green, blue and white on the screen

```
320*200 GRAPHICS DISPLAY   :   [ 13 ]

        64 gradations of red are displayed.

        64 gradations of green are displayed.

        64 gradations of blue are displayed.

        64 gradations of white are displayed.

Press [Enter] KEY
```

To exit this subtest and return to the Display Test menu:

Press **Enter** if **NO** was selected for *Test Loop* on the Test Parameter Menu.
Press **Ctrl** + **break** if **YES** was selected for *Test Loop* on the Test Parameter Menu.

Subtest 05   640 * 200 Character Display

This subtest uses 640*200 video resolution to display three windows, each window drives a different set of dots: even dots, odd dots and all dots. The screen below displays when this subtest is executed.

```
640 * 200 GRAPHICS DISPLAY  : [ 6 ]

          EVEN  DOTS    ODD  DOTS     ALL  DOTS
            DRIVEN        DRIVEN        DRIVEN
```

Press **ENTER** to display the following 16 colors: black, blue, green, cyan, red, magenta, brown, white, dark gray, light blue, light green, light cyan, light red, light magenta, yellow, and intensified white.

```
640*200 GRAPHICS DISPLAY   :   [ E ]

    BLACK                                        DARK  GRAY

    BLUE                                         LIGHT  BLUE

    GREEN                                        LIGHT GREEN

    CYAN                                         LIGHT  CYAN

    RED                                          LIGHT  RED

    MAGENTA                                      LIGHT  MAGENTA

    BROWN                                        YELLOW

    WHITE                                        INTENSIFIED WHITE

  Press [Enter] KEY
```

To exit this subtest and return to the Display Test menu:

Press **Enter** if **NO** was selected for *Test Loop* on the Test Parameter Menu.
Press **Ctrl** + **break** if **YES** was selected for *Test Loop* on the Test Parameter Menu.

Subtest 06   640 * 480 Character Display

This subtest uses 640*350 video resolution to display 16 colors: black, blue, green, cyan, red, magenta, brown, white, dark gray, light blue, light green, light cyan, light red, light magenta, yellow, and intensified white. The screen below displays when this subtest is executed.

```
640*350 GRAPHICS DISPLAY   :   [10 ]

0...............................................................0
0...............................................................0
0...............................................................0
0...............................................................0
0...............................................................0
00000000000000000000000000000000000000000000000000000000000000000
```

To exit this subtest and return to the Display Test menu:

Press **Enter** if **NO** was selected for *Test Loop* on the Test Parameter Menu.
Press **Ctrl** + **break** if **YES** was selected for *Test Loop* on the Test Parameter
  Menu.

Subtest 08   "H" Pattern Display

This subtest displays a full screen of "H" patterns.

```
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH

HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
```

To exit this subtest and return to the Display Test menu:

Press **Enter** if **NO** was selected for *Test Loop* on the Test Parameter Menu.
Press **Ctrl** + **break** if **YES** was selected for *Test Loop* on the Test Parameter Menu.

Subtest 9   Video DAC Register W/R/C

This subtest writes data patterns to the Video DAC register lookup table (PEL Address register), then reads the new data, and compares the result to the original data patterns. The original content of the Video DAC register is saved in RAM and restored after the test is completed.

The test data patterns are 00H,15H, 2AH and 3FH.

> *NOTE: If **NO** is selected for Test Loop on the Test Parameter menu, "Screen will remain blank" displays on the screen while the test is executing. When the test is complete the Display Test menu displays.*
>
> *If **YES** is selected for Test Loop on the Test Parameter menu, "The Screen will remain blank" displays on the screen and then the screen flickers due to the fast screen refresh while the test is executing. Press **Ctrl** + **break** to return to the Display Test menu.*

Subtest 10   Color Graphics Display
This subtest displays three colors, cyan, white and yellow on the screen as shown below.

```
640 * 480 GRAPHICS DISPLAY

        CYAN          WHITE          YELLOW
```

To exit this subtest and return to the Display Test menu:

Press **Enter** if **NO** was selected for *Test Loop* on the Test Parameter Menu.
Press **Ctrl** + **break** if **YES** was selected for *Test Loop* on the Test Parameter Menu.

Subtest 11   Color Attributes Display

This subtest displays 16 colors: black, blue, green, cyan, red, magenta, brown, white, dark gray, light blue, light green, light cyan, light red, light magenta, yellow, and intensified white. The screen below displays when this subtest is executed.

```
 640*480 COLOR ATTRIBUTE DISPLAY
```

0	1	2	3	4	5	6	7	8	9	A	B	C	D	E	F

```
 Press [Enter] Key
```

Pressing **Enter** executes VRAM mapping test which indicates vertical lines

Press **Enter** to execute the VRAM mapping test which displays a horizontal line at one dot intervals using Mode 12.

> **NOTE:** *The following screen does not display correctly. It will be amended in the next version.*

```
     Press [Enter] Key
```
Press **Enter** to execute the VRAM mapping test which displays a vertical line at four dot intervals using Mode 12.

```
     Press [Enter] Key
```

Press **Enter** to display VRAM mapping test using the all dots Mode.
```
    Press [Enter] Key
```

To exit this subtest and return to the Display Test menu:

Press **Enter** if **NO** was selected for *Test Loop* on the Test Parameter Menu.
Press **Ctrl** + **break** if **YES** was selected for *Test Loop* on the Test Parameter
Menu.

Subtest 12   Color Tiling

This subtest displays black, gray, white, and 3 gradations of red, green, and blue as shown in the following display.

Black	Red	Green	Blue
Gray	Red Gradation	Green Gradation	Blue Gradation
White	Red Gradation	Green Gradation	Blue Gradation

To exit this subtest and return to the Display Test menu:

Press **Enter** if **NO** was selected for *Test Loop* on the Test Parameter Menu.
Press **Ctrl** + **break** if **YES** was selected for *Test Loop* on the Test Parameter Menu.

3.8   Floppy Disk Test

CAUTION: Before running the floppy disk test, prepare a formatted work disk. Remove the diagnostics disk and insert the work disk into the FDD. The contents of the floppy disk will be erased.

To execute the Floppy Disk Test select 0**5** from the Diagnostic Test Menu, press **Enter** and follow the directions on the screen. The Floppy Disk Test contains five subtests that test the FDD. Move the highlight bar to the subtest you want to execute and press **Enter**.

Subtest 01   Sequential Read

This subtest sequentially reads all the tracks (Tracks 0 to 79)on the floppy disk.

Subtest 02   Sequential W/R/C

This subtest continuously writes the data pattern B5ADADh to all the specified tracks selected in Subtest 01. The data pattern is then read and compared to the original data.

Subtest 03   Random Address/Data

This subtest writes random data to random addresses on all tracks defined in Subtest 01. The data is then read and compared to the original data.

Subtest 04   Write Specified Address

> *NOTE*: *The first two digits of the ADDRESS indicate which track is being tested, the next two digits indicates the head, and the last two digits indicate the sector.*

This subtest allows you to verify the errors from Subtest 02. It writes specified data to a specified track and head. Use the Log Utilities (see Section 3.21) to specify the track number and head number where the error(s) occurred during Subtest 02. The following message displays on the screen to enter the test data, track number, and head number.

```
TEST DATA  ??
TRACK NO (00~79) ??
HEAD NO (0~1) ?
```

Subtest 05   Read Specified Address

This subtest reads data from a specified track and head.

The following message displays on the screen to enter the test track number and head number.

```
TRACK NO (00~79) ??
HEAD NO (0~1) ?
```

3.9   Hard Disk Test

To execute the Hard Disk Test select **06** from the Diagnostic Test Menu, press **Enter** and follow the directions on the screen. The Hard Disk Test contains eight subtests that test the functions of the hard disk drive. Move the highlight bar to the subtest you want to execute and press **Enter**.

NOTES: The contents of the hard disk will be erased when subtest 02, 03, 04, 05, 07 or 08 is executed. Before running the test, transfer the contents of the hard disk to other disk.

A password is necessary to execute the Hard Disk Test. The password is: **hard disk**

Subtest 01   Sequential Read

This subtest sequentially reads all the tracks on the HDD starting at track 0. When all tracks have been read, the test starts at the maximum track and reads sequentially back to track 0.

Subtest 02   Address Uniqueness (This subtest need very long time)

This subtest writes unique address data to each sector of the HDD track-by-track. The data written to each sector is then read and compared with the original data. There are three ways the HDD can be read:

- Forward sequential
- Reverse sequential
- Random

Subtest 03   Random Address Data

This subtest writes random data to 1000 different random addresses on the HDD. This data is then read and compared to the original data.

Subtest 04   Cross Talk and Peak Shift

This subtest writes eight of the most likely to fail data patterns (shown below) to a cylinder on the HDD, then reads the data while moving from cylinder to cylinder.

Data Pattern
B5ADADH
4A5252H
EB6DB6H
149249H
63B63BH
9C49C4H
2DB6DBH
D24924H

Subtest 05   Write Specified Address

*NOTE: This subtest is designed to run with the Test Loop set to **NO**. This subtest is a debug tool and the operator should enter the Test Parameters each time.*

.

This subtest allows you to verify the errors from Subtest 01. It writes specified data to a specified LBA. Use the Log Utilities (see Section 3.18) to specify the LBA number where the error(s) occurred during Subtest 01. The following message displays on the screen to enter the test data, and Sector count.

```
TEST DATA        ??
SECTOR COUNT (01~39) ??
START ADDRESS (00000000~MAX Address) ?
```

Subtest 06   Read Specified Address

*NOTE: This subtest is designed to run with the Test Loop set to **NO**. This subtest is a debug tool and the operator should enter the Test Parameters each time.*

This subtest allows you to verify the errors from Subtest 01. It reads specified data (Subtest 06) from a specified LBA. Use the Log Utilities (see Section 3.18) to specify the LBA number where the error(s) occurred during Subtest 01. The following message displays on the screen to enter the test sector count.

```
SECTOR COUNT (01~39) ??
START ADDRESS (00000000~MAX Address) ?
```

Subtest 07   Sequential Write

This subtest writes specified data to all cylinders on the HDD. The following message displays on the screen to enter the test data.

```
TEST DATA  ????(=37b3H)
```

Subtest 08   W-R-C Specified Address

This subtest writes specified data to a specified sector count, then reads and compares the result. The following message displays on the screen to enter the test data, sector count.

```
TEST DATA   ????(=37b3H)
SECTOR COUNT (01~39) ??
START ADDRESS (00000000~Max Address) ?
```

3.10 Real Time Clock Test

To execute the Real Time Clock Test select **07** from the Diagnostic Test Menu, press **Enter** and follow the directions on the screen. The Real Time Clock Test contains three subtests that test the computer's real time functions. Move the highlight bar to the subtest you want to execute and press **Enter**.

Subtest 01   Real Time

This subtest allows you to change the date and time. To execute the Real Time Subtest, follow these steps:

1. Select Subtest **01** and the following displays:

```
                   [ REAL TIME TEST  ]

   Current date : mm-dd-yyyy

   Current time : hh:mm:ss

   Enter new date : mm-dd-yyyy

   Enter new time : hh:mm:ss

 Press [Enter] key to exit test
```

2. If the current date is not correct, enter the correct date at the "Enter new date" prompt and press **Enter**. The following prompt displays:

```
   Enter new time :
```

3. If the current time is not correct, enter the correct time using a 24-hour format and press **Enter**.

> *NOTE: If **NO** is selected for Test Loop on the Test Parameter menu, the Real Time Clock Test menu displays.*
>
> *If **YES** is selected for Test Loop on the Test Parameter menu, the screen above displays and the test is executed again. Press **Ctrl** + **break** to return to the Real Time Clock Test menu.*

Subtest 02   Backup Memory

This subtest writes 50 bytes of test data (FFH, AAH, 55H, and 00H) to the CMOS 14th address, then reads the new data and compares it to the original data.

Subtest 03   Real Time Carry

> *CAUTION:* *When this subtest is executed, the current date and time are reset.*

This subtest checks the clock's carry function.

```
                   [ REAL TIME CARRY TEST  ]

   Current date : 12-31-1999

   Current time : 23:59:55

 Press [Enter] key to exit test
```

The following is the display after the date carry function is executed.

```
                   [ REAL TIME CARRY TEST  ]

   Current date : 01-01-2000

   Current time : 00:00:01

 Press [Enter] key to exit test
```

To exit this subtest and return to the Real Time Clock menu:

Press **Enter** if **NO** was selected for *Test Loop* on the Test Parameter Menu. Press **Ctrl** + **break** if **YES** was selected for *Test Loop* on the Test Parameter Menu.

3.11 Cache Memory Test

To execute the Cache Memory Test select **08** from the Diagnostic Test Menu, press **Enter** and follow the directions on the screen. The Cache Memory Test contains eight subtests that test the computer's cache memory. Move the highlight bar to the subtest you want to execute and press **Enter**.

---

*NOTE: If **NO** is selected for Test Loop on the Test Parameter menu, the screen will remain blank while the subtest is executing. When the test is complete the Cache Memory Test menu displays.*

*If **YES** is selected for Test Loop on the Test Parameter menu, the Test Status screen displays while the subtest is executing. Press **Ctrl + break** to return to the Cache Memory Test menu.*

Subtest 01   Constant Data Test

This subtest reads the contents of cache memory and saves it into RAM. The subtest then writes constant data (FFFFH, AAAAH, 5555H, 0101H, 0000H), reads the new data and compares the result with the original data pattern. The original cache memory content is then restored to the cache memory.

Subtest 02   Address Pattern Test

This subtest reads the contents of cache memory and saves it into RAM. The subtest then writes address data patterns (0000H, 0001H, 0002H, through 3FFDH, 3FFEH, 3FFFH), reads the new data and compares the result with the original data. The original cache memory content is then restored to the cache memory.

Subtest 03   Increment/Decrement Test

This subtest reads the contents of cache memory and saves it into RAM. The subtest then writes the increment data (00H, 01H, 02H, through FDH, FEH, FFH), reads the new data and compares the result with the original data. After comparing the incremental data, decrement data (FFH, FEH, FEH, through 02H, 01H, 00H) is written and the new data is read and compared with the original data. The original cache memory content is then restored to the cache memory.

Subtest 04   Bit Shift Pattern Test

This subtest reads the contents of cache memory and saves it into RAM. The subtest then writes the bit shift data patterns (1 bit shifted every 4 bytes), reads the new data and compares the result with the original data. The original cache memory content is then restored to the cache memory.

Subtest 05   Write Disturb Test (We can't support this time)

This subtest reads the contents of cache memory and saves it into RAM. The subtest then writes the "write disturb data," reads the new data and compares the result with the original data. The original cache memory content is then restored to the cache memory.

Subtest 06   Checker Board Test

This subtest reads the contents of cache memory and saves it into RAM. The subtest then writes the "checker board data," (data which is inverted front/back and left/right) reads the new data and compares the result with the original data. The original cache memory content is then restored to the cache memory.

Subtest 07   Marching Test

This subtest reads the contents of cache memory and saves it into RAM. The subtest then writes the "marching data," (00H through 01H and 01H through 00H) reads the new data and compares the result with the original data. The original cache memory content is then restored to the cache memory.

Subtest 08   Working Data Test

This subtest reads the contents of cache memory and saves it into RAM. The subtest then writes the "working data," reads the new data and compares the result with the original data. The original cache memory content is then restored to the cache memory.

3.12 High Resolution Display Test

To execute the High Resolution Display Test select **09** from the Diagnostic Test Menu, press **Enter** and follow the directions on the screen. The High Resolution Display Test contains six subtests that test the computer's high resolution video display. Move the highlight bar to the subtest you want to execute and press **Enter**.

Subtest 01   VRAM W/R/C Test

This subtest writes address and data patterns to Video RAM, then reads the values from the Video RAM and compares them to the original test patterns. During the execution of this test 13 different color screens display: black, green, green, blue, blue, red, red, red, black, white, pink, cyan, and black.

Test Process:

1. Sets the video display to 1024*768 mode

2. Bank change test
    Writes 1 byte data in order 0, 1, through Fh, and compares the result, at every bank, to the original data patterns.

3. Bit shift data test
    Writes 01h data into addresses A000:0000h through A000:FFFFh for each bank, reads the new data and, then compares the results with the original data. Data is then shifted 1 bit to the left, and all bits (01h, 02h, 04h, 08h, through 80h) are tested again.

4. Fixed data test
    Writes test data (in order FFh, AAh, 55h, 00h) into addresses A000:0000h through A000:FFFFh for each bank by, reads the new data and, then compares the results with the original data. Data is then shifted 1 bit to the left, and all bits are tested again

> *NOTE: If **NO** is selected for Test Loop on the Test Parameter menu, the screen displays the colors listed above and then the High Resolution Display Test menu displays.*
>
> *If **YES** is selected for Test Loop on the Test Parameter menu, the screen displays the colors listed above. Press **Ctrl** + **break** to return to the High Resolution Display Test menu.*

Subtest 02   640*480 Mode Display

This subtest uses 640*480 video resolution to display a high resolution white
frame, 256 letter types (8*16 pixels) and 64 gradations of white, red, green,
and blue as shown below.

[640*480 256]   Press [Enter]key

                                                      256 letter
                                                      types
   indication

```
        0---+---1---+---2---+---3---+---4---+---5---+---6---

WHITE                         64 gradations

RED                           64 gradations

                              64 gradations
GREEN
                              64 gradations

BLUE
```

To exit this subtest and return to the High Resolution Display Test menu:

Press **Enter** if **NO** was selected for *Test Loop* on the Test Parameter Menu.
Press **Ctrl** + **break** if **YES** was selected for *Test Loop* on the Test Parameter
Menu.

Subtest 03   800 * 600 Mode Display

This subtest uses 800*600 video resolution to display a high resolution white frame, 256 letter types (8*16 pixels) and 256 gradations of white, red, green, and blue as shown below.
[800*600 256]   Press [Enter] key

256 letter types indication

```
0---+---1---+---2---+---3---+---4---+---5---+---6---
```

WHITE	64 gradations
RED	64 gradations
GREEN	64 gradations
BLUE	64 gradations

To exit this subtest and return to the High Resolution Display Test menu:

Press **Enter** if **NO** was selected for *Test Loop* on the Test Parameter Menu.
Press **Ctrl** + **break** if **YES** was selected for *Test Loop* on the Test Parameter Menu

Subtest 04   1024* 768 Mode Display

This subtest uses 1024*768 video resolution to display a high resolution white frame, 256 letter types (8*16 pixels) and 64 gradations of white, red, green, and blue as shown below.

[1024*768 256]   Press [Enter] key

                          256 letter types
                          indication

```
0---+---1---+---2---+---3---+---4---+---5---+---6---
```

WHITE	64 gradations
RED	64 gradations
GREEN	64 gradations
BLUE	64 gradations

To exit this subtest and return to the High Resolution Display Test menu:

Press **Enter** if **NO** was selected for *Test Loop* on the Test Parameter Menu.
Press **Ctrl** + **break** if **YES** was selected for *Test Loop* on the Test Parameter Menu.

Subtest 05   "H" Pattern Display

This subtest uses the 1024*768 Mode to display a high resolution white frame, "H" letters (8*16 pixels fonts), at 128 letters by 48 lines.

```
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
```

To exit this subtest and return to the High Resolution Display Test menu:

Press **Enter** if **NO** was selected for *Test Loop* on the Test Parameter Menu.
Press **Ctrl** + **break** if **YES** was selected for *Test Loop* on the Test Parameter Menu.

Subtest 06   Focus Test ("E" Pattern)

This subtest sets the 1024*768 Mode and displays "E" patterns (18*18 dot fonts), at 56 letters *42 lines surrounded by a high resolution white frame.

To exit this subtest and return to the High Resolution Display Test menu:

Press **Enter** if **NO** was selected for *Test Loop* on the Test Parameter Menu.
Press **Ctrl** + **break** if **YES** was selected for *Test Loop* on the Test Parameter Menu.

3.13 Multimedia Test

To execute the Multimedia Test select **10** from the Diagnostic Test Menu, press **Enter** and follow the directions on the screen. The Multimedia Test contains four subtests that test the computer's multimedia functions. Move the highlight bar to the subtest you want to execute and press **Enter**.

NOTE: Use the Toshiba Backup CD-ROM for Subtests 01, 02, and 03.

Because CDROM driver issue , the Multimedia function can't test , this is limitation .

Subtest 01   Sequential Read Test

This subtest sequentially reads one block unit (2K bytes) of all logical addresses from the test CD.

---

*NOTE: If **NO** is selected for Test Loop on the Test Parameter Menu, the screen will remain blank while the subtest is executing. When the test is complete the Multimedia Test menu displays.*

*If **YES** is selected for Test Loop on the Test Parameter Menu, the Test Status screen displays while the subtest is executing. Press **Ctrl** + **break** to return to the Multimedia Test menu.*

Subtest 02   Random Read Test

This subtest randomly reads all addresses.

Subtest 03   Read Specified Address Test

This subtest reads data from a specified block of addresses.

The following message displays on the screen to enter the start and end block addresses:

```
START BLOCK ADDRESS ?
END BLOCK ADDRESS   ?
```

Subtest 04   1 Point W/R/C (R/RW Media)

NOTE: Use CD-R or CD-RW, the CD-ROM and DVD cannot be used for this subtest, and some DVD-dual can't support this test.

This subtest writes specified data to a specified block count, then reads and compares the result.

3.14 MEMORY2 Test

To execute the Expansion Test select **11** from the Diagnostic Test Menu, press **Enter** and follow the directions on the screen. The MEMORY2 Test contains four subtests that test the computer's. Move the highlight bar to the subtest you want to execute and press **Enter**.

---

*NOTE: If **NO** is selected for Test Loop on the Test Parameter menu, the Test Status screen displays while the test is executing. When the test is complete the Memory Test menu displays.*

*If **YES** is selected for Test Loop on the Test Parameter menu, the Test Status screen displays while the test is executing. Press **Ctrl** + **break** to return to the Memory Test menu*

Subtest 01   All one/All zero test

This subtest performs pseudorandom data read/write. The data consists of "all ones"/"all zero" patterns produced by pseudorandom sequence generator. The test checks address error.

```
FFFFFFFFFFFFFFFF0000000000000000
0000000000000000FFFFFFFFFFFFFFFF
```

Subtest 02   Walking 1/Walking 0 test (Left)

This subtest uses "running one"/"running zero" patterns. This test sequence allows also to checking system bus in maximum noise conditions. The following test sequence is written.

```
7FFF7FFF7FFF7FFF8000800080008000
BFFFBFFFBFFFBFFF4000400040004000
```

After all the memory being tested is filled with the pattern, it is read in descanting   direction and compared with reference data. As the memory is read, the data is replaced with inverse test pattern. After all the memory is read and replaced with inverted pattern, it is read in descanting direction and compare with new reference data. As the memory is read, the data is replaced with next pattern, which is like first one shifted to right.

Subtest 03   Walking 1/Walking 0 test (Right)

Tee test method is the same as Subtest2. However, the data to be used differs.

```
8000800080008000 7FFF7FFF7FFF7FFF
4000400040004000BFFFBFFFBFFFBFFF
```

Subtest 04   Walking 1/Walking 0 test (Left/ Right)

Tee test method is the same as Subtest2. However, the data to be used differs.

```
7FFF7FFF7FFF7FFF8000800080008000
BFFFBFFFBFFFBFFF4000400040004000
DFFFDFFFDFFFDFFF2000200020002000

FFFBFFFBFFFBFFFB0004000400040004
FFFDFFFDFFFDFFFD0002000200020002
FFFEFFFEFFFEFFFE0001000100010001
80008000800080007FFF7FFF7FFF7FFF
4000400040004000BFFFBFFFBFFFBFFF

0004000400040004FFFBFFFBFFFBFFFB
0002000200020002FFFDFFFDFFFDFFFD
0001000100010001FFFEFFFEFFFEFFFE
```

3.15 Error Codes and Error Status Names

The following table lists the error codes and error status names for the Diagnostic Tests.

Table 3-2 Error codes and error status names (1/2)

Device Name	Error Code	Error Status Name
(Common)	FF	Data Compare Error
Memory	02	Protected Mode Not Changed
	??	Other Error
FDD	01	Bad Command Error
	02	Address Mark Not Found
	03	Write Protected
	04	Record Not Found
	06	Media Change Line Error
	08	DMA Overrun Error
	09	DMA Boundary Error
	0C	Select Media Error
	10	CRC Error
	20	FDC Error
	40	Seek Error
	80	Time Out Error
	??	Other Error
HDD	01	Bad Command Error
	02	Bad Address Mark Error
	04	Record Not Found
	05	HDC Not Reset Error
	07	Drive Not Initialized
	09	DMA Boundary Error
	0A	Bad Sector
	0B	Bad Track Error
	10	ECC Error
	11	ECC Recover Enabled
	20	HDC Error
	40	Seek Error
	80	Time Out Error
	AA	Drive Not Ready

Table 3-2 Error codes and error status names (2/2)

Device Name	Error Code	Error Status Name
HDD	BB	Undefined Error
	CC	Write Fault
	E0	Status Error
	F0	No Sense Error
	??	Other Error
Cache Memory	02	Protect Mode Error
	03	Caching Error
	??	Other Error
Multimedia	01	Write Error
	0F	Invalid Drive
	15	Drive Not Ready
	??	Other Error

*NOTE: If error status name is **Other Error** , please reference the **Error Code** for error information*

3.16   Running Test

NOTES:

1. *You may add or delete subtests using the Running Test Edit Item function, see Section 3.20.*

2. *Do not forget to insert a work disk in the FDD. If a work disk is not inserted an error will be generated during the Floppy Disk Test.*

3. *If the test completes successfully an "PASS" sign with blue letters displays on the screen.*

4. *If the test fails or is interrupted before completion an "FAIL" sign with red letters displays on the screen.*

5. *If running item not select an "NOITEM" sign with green letters display on the screen.*

6. *All errors which occur during execution of the Running Test are logged in the Log File.*

7. *This program is executed according to the* Count Loop *number selected in the Running Test Edit Item, see Section 3.20. To terminate the program, press **Ctrl** + **Break.***

3.17 DMI INFOEMATION

Select **03** from the Diagnostics Menu and press **Enter** to Check or Write DMI Information Data:

3.17.1 Check DMI Information

The Check DMI Configuration program contains the following configuration information for the computer:

> *NOTE: Please set the media of DVD before starting a test.*
>
>   *AHCI cannot control under the DOS*

System information (Type 1)
1. Manufacture   : TOSHIBA
2. Product Name : Satellite XXXXXX
3. Version   :(TOSHIBA Part Number)
4. Serial Number : Serial Number
5. UUID Number: xxxxxxxxxxxxxxxxxxxxxxxxxxxxx

OEM Strings (Type 11)
1. OEM String   : xxxxxxxxxxxxxxxxxxxxxxxxxx

On Board LAN MAC
1. MAC ADR : xxxxxxxxxxxx

DVD Region Code
1. User Change Time : X
2. Region Code   : X

3.17.2 Write DMI Information

The Write DMI Information program contains the following information for the computer :

1. Manufacture Name (TOSHIBA)
2. Product Name (Satellite XXXXXX)
3. Part Number (PSP50X-XXXXXX)
4. Serial Number (12345678W)
5. OEM String (PSP50X-XXXXX,SXXXXXXXXXX)
6. Model Select [1]Dyn-Jpn [2]Tos-Jpn [3]Tos-Eng [4]Tos-FR
7. Write UUID (XXXXXXXXXXXXXXXX)
8. Brightness Write (XXXXXXXX)
a. SLP2.0 Build Sig [1]Non OS [2]OS

b. Wireless LAN ID (001E4CXXXXXX)
c. AC Adapter Select [1]65W [2]75W [3]90W [4]120W

Select 1 ~ c to keyin new data , select 0 to exit program , program will compare input data length with the max length , if over will retry keyin

Note : Please Check New DMI Information After System Restart !!   V3.2

  1. **** Manufacture Name (TOSHIBA) - (32)
  2. **** Product Name (Satellite XXXXXX) - (32)
  3. **** Part Number (PSP50X-XXXXXX) - (26)
  4. **** Serial Number (12345678W) - (32)
  5. **** OEM String (PSP50X-XXXXX,SXXXXXXXXXX) - (64)
  6. **** Model Select [1]Dyn-Jpn [2]Tos-Jpn [3]Tos-Eng [4]Tos-FR – (2)
  7. **** Write UUID (XXXXXXXXXXXXXXXX) – (16)
  8. **** Brightness Write (XXXXXXXX) – (8)
  a. **** SLP2.0 Build Sig [1]Non OS [2]OS-(2)
  b. **** Wireless LAN ID (001E4CXXXXXX) –(12)
  c. **** AC Adapter Select [1]65W [2]75W [3]90W [4]120W –(1)
  0. **** Exit
  Please Select (1 ~ c) To Modify DMI String :

  Current Data of EEPROM : Toshiba
  1. Enter the Manufacture Name : TOSHIBA
  Your Keyin is   : TOSHIBA   …… This is your keyin data
  EEPROM return : TOSHIBA   ……. This is read from eeprom back

Press any key to continue
Note : Please Check New DMI Information After System Restart !!

If Keyin length too long will retry :

  Current Data of EEPROM : 12345678WU
  4. Enter the Serial Number : 12345678901234
  Your Keyin String Length Not Correct 14 > 10 !!!

  Current Data of EEPROM : 12345678WU
  4. Enter the Serial Number :

NOTE: *The SLP2.0 is Microsoft SPEC , call "System Locked Pre-Installation" or "SLP",*

It is for OEM pre install Windows and no need to Active , If you select Non OS , then you need to Active your OS before you use .

3.18 Log Utilities

This function logs error information generated while a test is in progress and stores the results in RAM (Maximum error log : 500 times). This function can store data on a floppy disk. If the power switch is turned off, the error information will be lost. Error information is displayed in the following order:

1. Error count (CNT)
2. Test name and subtest number (TEST)
3. Pass count (PASS)
4. Error status (STS)
5. FDD/HDD or memory address (ADDR)
6. Write data (WD)
7. Read data (RD)
8. Error Name (ERROR NAME/DETAILS)

3.18.1 Operations

1. Select **04** and press **Enter** in the Diagnostics Menu to log error information into RAM or onto a floppy disk. Error information is displayed in the following format:

```
                XXXX ERRORS            PASSCOUNT = XXXX

 CNT    TEST      PASS    STS    ADDR      WD    RD    ERROR NAME/DETAILS
 001    FDD 02    0000    180    0000001   00    00    WRITE PROTECTED
 002    FDD 01    0000    120    0000001   00    00    TIME OUT ERROR
  |      |    |    |       |        |       |     |               |
  |      |    |    |       |      Address    |     |               |
  |      |    |    |     Error Status         |     |               |
  |      |    |   Pass Count                  |     |               |
  |      |   Subtest Number              Read Data  |               |
  |     Test Name                   Write Data                      |
Error Count                                      Error Name and Detail
 [[1:Next, 2:Prev, 3:Exit, 4;Clear, 5:FD Log Read, 6:FD Log Write, 7:Log Save]]
```

2. Error information displayed on the screen can be manipulated with the following number keys:

The **1** key scrolls the display to the next page.
The **2** key scrolls the display to the previous page.
The **3** key returns to the Diagnostics Menu.
The **4** key erases all error log information in RAM.
The **5** key reads the log information from a floppy disk.
The **6** key writes the log information to a floppy disk.
The **7** key save the log information to a floppy disk.

The following are the test abbreviations for each Diagnostics Test.

Test Name	Test Abbreviations
System Test	ROM
Memory Test	RAM
Keyboard Test	KBD
Display Test	CRT
Floppy Disk Test	FDD
Hard Disk Test	HDD
Real Time Clock Test	RTM
Cache Memory Test	CAH
Height Resolution Display Test	KIF
Multimedia Test	MLT
Memory2 Test	RAM

3.19 System Configuration

Select **05** from the Diagnostics Menu and press **Enter** to display the following system configuration:

```
SYSTEM CONFIGURATION :

    * - BIOS VER = VX.XX  KBC VER = XXXX
    * - MAC ADDRESS : XXXXXXXXXXXX
    * - 0 ASYNC ADAPTER
    * - 1 HDD DRIVE(S):XXXXXXXXXXXXXXXXXXXXXXXXXXX
               FW Rev.:XXXXXXXX
               CUR LBA:XXXXXXXX   ORG LBA:XXXXXXXX
    * - BATTERY TYPE:XXXXXXXXXX
    * - XXXMB MEMORY SIZE
    * - XXX CPU
    * - 1 Vedio Chip XXXXXXXXXXXXX
    * - 1 ODD DRIVE(S):XXXXXXXX
                 FW Rev.:XXXX
```

Press **Enter** to return to the Diagnostics Menu.

3.20 Running Test Edit Item

3.20.1 Function Description

Function description lets you add or delete the subtests used to execute the Running Test.
The following screen displays after pressing the **Tab** key to edit an item in the Running Test.

```
KEY OPERATION

↓      Cursor Down
↑      Cursor Up
PgDn   Page Down
PgUp   Page Up
Home   Top of ITEM
End    End of ITEM
Ins    Insert ITEM
Del    Delete ITEM
Enter End
```

3.20.2 Operation Description

Select **05** from the Diagnostics Menu and press **Enter** to display the following:

```
                      Test Item Editor              [RUNNING TEST]

Loop Count (1-65535, 0 = infinity) 00000          Error Stop    NO

T-No      Test Name           S-No          Subtest Name
01        System Test         Subtest 01    ROM Checksum
02        Memory Test         Subtest 01    Conventional Memory
02        Memory Test         Subtest 02    Protect Mode
02        Memory Test         Subtest 03    Protect Mode (32MB Max)
02        Memory Test         Subtest 04    RAM Refresh
04        Display Test        Subtest 01    VRAM W/R/C
04        Display Test        Subtest 02    Character Attribute Set
04        Display Test        Subtest 03    Character Set
04        Display Test        Subtest 04    80 * 25 Character Display
04        Display Test        Subtest 05    320 * 200 Graphics Display
04        Display Test        Subtest 06    640 * 200 Graphics Display
04        Display Test        Subtest 07    640 * 480 Graphics Display
04        Display Test        Subtest 08    Display Page
05        Floppy Disk Test    Subtest 02    Sequential W/R/C
08        Hard Disk Test      Subtest 01    Sequential Read
08        Real Time Clock Test Subtest 02   Backup Memory Test

                    Tab: HELP (Key Operation)
```

1. Enter a **number** or **0** for **Loop Count** and press **Enter**.

Select a number from 1 to 65535 to define the number of times the Running Test
    executes.
Select 0 to run the test continuously until halted by the user.

2. Select the **NO** or **YES** for **Error Stop** and press **Enter**.

    Select **NO** to keep the test running even if an error is found.
    Select **YES** to stop the test program when an error is found.

> *NOTE: All errors which occur during execution of the Running Test are logged
> in the Log File.*

3. Press **Insert** to add a subtest.

4. Press **Delete** to remove the selected subtest.

5. Press **Enter** when you have finished editing the Running Test list.

6. The following message displays:

```
   Do you want to save the data?

      Save to disk
      Do not save
```

7. Select the option and press **Enter**.

8. Select **03** from the Diagnostics Menu and press **Enter** to execute the Running Test.

> *NOTE: If press **Ctrl+break** in the runin process, please press more one any key
> to exit.*

3.21 Common Tests and Operation

3.21.1 How to operate a window

To input parameters, or open a window use the following keys.

      ↑ ↓ → ← key   : to move a highlight bar
      [Enter] key   : to select an item at the highlight bar
      [Esc] key   : to close the current window and go back to the previous
                                    window

3.21.2 How to Stop the Test Program

To stop a test:

      [**Ctrl**]+[**Break**]   Press the Ctrl key and the Break key simultaneously.

3.21.3 Test Status Screen

NOTE: *The Test Status Screen does not display during all the tests. See the specific test description Sections 3.4 through 3.14.*

The following Test Status screen displays during most tests. See the description of each test Sections 3.4 through 3.14 for specific screen information.

```
        Test Name

Sub Test      :0101
Pass Count    :00000      Error Count    :00000
Write Data    :00         Read Data      :00
Address       :00000000   Status         :00

```

Test Name   Displays the name of the test being executed.

      Subtest No.   Displays the Subtest number in the following format:

                                    ffgg
                                       ff = Subtest No.
                                       gg= Step Number (Will be blank if the test does not have a
                                              Step Number.)

Pass Count	Displays the number of times the test has been executed.
Error Count	Displays the number of errors which have occurred during the test.
Write Data	Displays only the test data that has failed to compare during the test while being written during the test.
Read Data	Displays test data that has failed to compare during the test while being read during the test.
Test Address	Displays the Test Address. (The format differs for each test.)
Error Status	Displays the error status.
Error Name	Displays the name of the error.

3.21.4 Test Stop Display

If an error occurs during a Subtest and YES is selected for Error Stop, the following message displays:

```
[HALT OPERATION]

     1. Test end
     2. Continue
     3. Retry
```

     * Select 1, 2, or 3

The three selections have the following functions:
  1: Terminates the test program and exits to the subtest menu.
  2: Continues the test from the error.
  3: Restarts the test from the beginning.

Use the arrow keys to move the cursor to the desired option and press Enter.

3.21.5 How to enter data

Letters which must be entered are always shown in [ ]. Simultaneous entries are displayed by a "+" mark. For example:

  [a] [Enter]
  Press the "a" key, then press the [Enter] key.

  [Ctrl] + [c]
  Press the [Ctrl] key and the "c" key simultaneously.

Chapter 4

Replacement Procedures

Chapter 4   Contents

Figures

4.1　Overview

This chapter describes the procedure for removing and replacing the field replaceable units (FRUs) in the PC. It may not be necessary to remove all the FRUs in order to replace one. The chart below provides a guide as to which other FRUs must be removed before a particular FRU can be removed. The numbers in the chart indicate the relevant section numbers in this manual.

In all cases when removing an FRU, the battery pack must also be removed. When repairing an FRU that is the potential cause of a computer fault, use the chart to determine the order in which FRUs need to be removed.

The tilt stand, if it is installed, can be removed without any other FRUs removed.

4.2 Battery Pack		
4.3 PC Card		
4.4 SSD/ HDD (Main HDD)	4.8 Memory Module	4.12 TV Tuner Card
4.5 Optical Disk Drive	4.9 Keyboard	4.13 Display Assembly
4.6 Slot in Optical Disk Drive	4.10 Wireless Lan Card	
4.7 HDD (Second HDD)	4.11 Bluetooth module	
4.14 Top Cover assembly		4.19 CPU
4.15 Touch Pad	4.16 USB Board	4.20 LCD unit/FL inverter
	4.17 B CAS Board	4.21 Web Camera module
	4.18 System Board	4.22 Speaker Box
4.23　Application for Thermal pad and grease on CPU, North Bridge, and VGA board		

Safety Precautions

Please read the following safety instructions before disassembling the computer and always follow the instructions while working on the computer.

DANGER: 1. *In the case of the battery, always use authentic parts or equivalent parts approved by Toshiba. Other batteries may have different specifications that are incompatible with the computer and may result in fire or explosion.*
Due to the risk of alkali fluid leaks, never attempt to heat or disassemble the battery. Similarly, due to the risk of explosion, never expose the battery to flame.

2. *Some parts including the power supply and FL inverter generate high voltages. If you need to turn on the power while disassembling the computer, do not touch any connectors or other components due to the risk of electric shock. Also, do not disassemble individual parts when performing routine maintenance.*

WARNING: 1. *To prevent electric shock, turn off the power unplug the AC adapter from the power source.*

2. *As the battery installed to the computer is typically already charged, the risk of electric shock remains even when the AC adapter is unplugged from the socket. To prevent electric shock, always take off any metal jewelry or accessories such as necklaces, bracelets or rings before working on the computer. Never work with wet or moist hands.*

3. *Take care not to injury yourself on any edges or corners.*

CAUTION: 1. *Confirm that replacement parts have compatible specifications before replacing on the computer. Never use incorrect parts as these may cause faults on the computer.*

2. *To prevent internal damage such as short circuits or burning, do not allow any screws, paper clips, or other metal objects to fall into the computer. When removing screws, always replace with the same size screws. Ensure that all screws are fully tightened. Loose screws may result in short circuits leading to overheating, smoke or flame.*

3. *To prevent electric shock, check that you have disconnected all cables from a part before removing the part.*

4. *When connecting to the AC power supply, use only an AC adapter and cable approved by Toshiba.*

5. *To prevent electric shock, ensure that all replacement parts are compatible with the computer and that all cables and connectors are securely connected.*

Before You Begin

Take note of the following points before starting work. Always remove the AC adapter and battery pack before commencing any of the procedures. The procedure for removing the battery pack is described in section "4.2 Battery Pack".

1. Do not disassemble the computer unless it is operating abnormally.

2. Use the designated tools.

3. Ensure that the environment for working on and storing parts does not contain any of the following.

    *   Dust or dirt

    *   Static electricity

    *   Extremely hot, cold or humid conditions

4. Perform the diagnostic tests described in Chapter 2 to determine which FRU is the cause of the fault.

5. Do not perform any unnecessary work. Always work in accordance with the disassembly and reassembly procedures in this manual.

6. Keep parts removed from the computer in a safe place away from the computer where they will not be damaged or interfere with your work.

7. Disassembling requires the removal of a large number of screws. Keep removed screws in a safe place such that you can determine which screws belong to which part.

8. When reassembling, ensure that you use the correct screws and fit parts in the correct position. Screw sizes are noted in the text and figures.

9. As all parts have sharp edges and corners, take care not to cut yourself.

10. After replacing an FRU, check that the computer and replaced part operate correctly.

Disassembly Procedure

Three main types of cable connector are used.

- Pressure plate connector
- Spring connector
- Normal pin connector

When disconnecting a pressure plate connector, lift up the tag on one side of the plastic pressure plate on the connector and pull the cable out from the connector. When reconnecting a cable to a pressure plate connector, lift up the pressure plate to a suitable height and insert the cable into the connector. Press down on both sides of the pressure plate such that both sides of the plate and connector are at the same height and that the cable is fixed in the correct position. Pull the cable to ensure that it is securely connected. If the cable is disconnected from the connector, reconnect it making sure that you lift the pressure plate high enough to insert fully the cable.

For spring connectors, lifting up the stopper frees the cable and allows it to be pulled out. To reconnect, hold the stopper in the up position and insert the cable, then lower the stopper to secure the cable.

Normal pin connectors are used for all other cables. Simply pull out or push in these connectors to disconnect or reconnect.
Pressure plate connector   Spring connector

Assembly Procedure

After the computer has been disassembled and the part that caused the fault has been repaired or replaced, the computer must be reassembled.

Take note of the following general points when assembling the computer.

- Take your time and follow the instructions carefully. Hurrying the assembly work will only introduce new problems.

- Check that all cables and connectors are securely connected;

- Before fastening FRUs or other parts in place, ensure that no cables are caught on screws or the FRU.

- Check that all latches are securely closed.

- Ensure that you have installed all FRUs correctly and do not have any screws left over. Using an incorrect screw may damage the thread or screw head and result in the FRU not being securely fastened in place.

After installing FRUs, check that the computer operates correctly.

Tools and Equipment

For your safety and the safety of the people around you, it is important that you use Electrostatic Discharge (ESD) equipment. Correctly utilizing of the equipment increases the percentage of successful repairs and saves on the cost of damaged or destroyed parts. The following equipment is required for disassembly and assembly.

- One Philips screwdriver with type 0 bit (for THIN HEAD screws)

- One Philips screwdriver with type 1 bit (for screws other than above)

- Tweezers (for lifting screws)

- ESD mats (lay on work table or floor)

- An ESD wrist strap and heel grounder

- Anti-static carpet or flooring

Screw Tightening Torque

Use the following torque when tightening screws.

CAUTION: *Overtightening may damage screws or parts. Undertightening may allow screws to loosen (and possibly fall out) causing a short circuit or other damage.*

NOTE: *To tighten screws quickly and accurately, an electric screwdriver is recommended.*

- M2 (2mm)   0.167 N· m (1.7 kgf· cm)
- M2.5 (2.5mm)   0.245 N· m(2.5 kgf· cm)
- M2.5 (2.5mm)   0.392 N· m(4.0 kgf· cm) for Hinge support
- M3.0 (3mm)   0.245 N·m (2.5 kgf·cm)

NOTE: *To prevent damage to THIN HEAD screws, press along the axis of the screwdriver while turning the screw. This is because the contact area between the screw and driver is less than for a pan head screw (standard pan-shaped screw head).*
Grip Color

Some screws have a colored grip area to help you determine the length of the screw.

- Even numbered length screws: Brown
- Odd numbered length screws: White
- Special length screw: Blue

Grip area

"Special length screw" means screws whose length is indicated in an integral number to the first decimal places such as 2.5 mm, 2.8 mm and so on.

Screw Notation

To make maintenance of the computer easier, markings of the kinds of the screws including the types and lengths are indicated on the computer body.

Format:

Screw shape + Screw length (mm)

Screw shape

B: Bind screw
F: Thin head screw
S: Super thin head screw
T: Tapping screw
U: Other screws (Unique screws: pan head, stud, etc.)

Example: B6 … 6mm bind screw

4.2 Battery pack

Removing the battery pack

The following describes the procedure for removing the battery pack (See Figure 4-2-1).

CAUTION: Take care not to short circuit the terminals when removing the battery pack. Similarly, do not drop, knock, scratch, disassemble, twist, or bend the battery pack.

1. Turn off the power of the computer.

2. Disconnect the AC adapter and all external devices from the computer.

3. Turn the computer upside down.

4. Slide and hold the battery release latch (2) to free the battery pack after moving the battery release latch (1) into it unlock position – pick the battery pack out of the computer from fillister.
Figure 4-2-1 Remove the battery pack

NOTE: *Dispose of the used battery pack in accordance with the laws and ordinances of your local authority.*

Installing the battery pack

The following describes the procedure for installing the battery pack (See Figure 4-2-2).

CAUTION: *There is a danger that the lithium ion battery pack may explode if not fitted, operated, handled, or disposed correctly. Dispose always the used battery pack in accordance with the laws and ordinances of your local authority. Use only the batteries approved by Toshiba.*

NOTE: *Check visually the battery terminals and clean off any dirt with a dry cloth.*

1. Turn off the power of the computer.

2. Disconnect the AC adapter and all external devices from the computer.

3. Insert the battery pack

4. Ensure the battery release latch (1) is moved into its locked position

Figure 4-2-2 Install the battery pack

4.3 PC card

Removing a PC card

The following describes the procedure for removing a PC card (See Figure 4-3-1).

> *CAUTION: Insert or remove a PC card in accordance with any instructions in a PC card manual or the manuals of the computer system you are using.*

1. Push the **PC card**. It will pop out PCMCIA Card when you release it. And NEW Card same as PC card. Then press the card once more to eject a card.

2. Grasp one of **PC card** and remove it.

> *NOTE: If a PC card is not inserted all the way, the eject button may not pop out. Be sure to push a PC card firmly and press the eject button again.*

Figure 4-3-1 Remove a PC card

Installing a PC card

The following describes the procedure for inserting a PC card (See Figure 4-3-2).

1. Make sure the **PC card** does not stick out.

2. Insert a **PC card** and press it until it is securely connected.

Figure 4-3-2 Insert a PC card

4.4   SSD/HDD (Main HDD)

Removing a SSD/MAIN HDD-H9.5mm / HDD-H12.5mm

The following describes the procedure for removing the SSD/main HDD (See Figure 4-4-1 to 4-4-3).

> *CAUTION:*   *Take care not to press on the top or bottom of a SSD/HDD. Pressure may cause data loss or damage to the device.*

1.   Turn the computer upside down.

2.   Remove the following **screws** securing a SSD/HDD slot cover and remove a **SSD/HDD slot cover**.

   - M2.5×4.0B   FLAT BIND screw   x2

3.   Remove the following **screws** securing the **SSD/HDD assembly**.

   - M2.5×3.0B   FLAT BIND screw   x2

4.   Disconnect the **SSD/HDD assembly** from the connector on the system board**.**

Figure 4-4-1   Turn the computer upside down

CAUTION: *When a SSD/HDD is installed, they are installed in the position as the following figure.*

Figure 4-4-2 Remove the SSD/MAIN HDD assembly

5. Remove the following **screws** securing the SSD/HDD holder and remove the **SSD/ HDD holder**.
- M3.0×3.0B   FLAT BIND screw   x4

M3x3 4PCS

SSD/HDD H=9.5mm
/ H=12.5mm

Figure 4-4-3 Remove SSD/MAIN HDD

Installing SSD/MAIN HDD-H9.5mm / HDD-H12.5 mm

The following describes the procedure for installing the main HDD.

1. Install a SSD/HDD to the **SSD/HDD holder** and secure it with the following **screws**.

   - M3.0×3.0B   FLAT BIND screw   x4

NOTE: *Although they are 3mm head screws, screw torque must be set in 2.5kg-cm for four screws securing the HDD holder.*

---

2. Insert the **SSD/HDD assembly** into the SSD/HDD slot and connect it carefully to the **SSD/MAIN HDD** on the system board.

3. Secure the **SSD/HDD assembly** with the following **screw**.

   - M2.5×3.0B   FLAT BIND screw   x2

   - M2.5×4.0B   FLAT BIND screw   x2

4.5   Optical disk drive

NOTE :   *Do not apply excessive force to the top of an optical disk drive.*

Do not touch the shaded portion of the figure below, when the drive is removed or installed.

Removing an optical disk drive

The following describes the procedure for removing an optical disk drive (See Figure 4-5-1and 4-5-2).

1. Remove **MAIN HDD** Slot cover and next remove the following **screws** securing an optical disk drive.

    * M2.5×3.0B   FLAT BIND screw   x1

2. Disconnect an **optical disk drive** toward the arrow direction from the connector **CN26** on the system board.

Figure 4-5-1 Remove an optical disk drive

Figure 4-5-2 Disassemble the side bracket

Installing an optical disk drive

The following describes the procedure for installing an optical disk drive.

1. Attach the **ODD bracket** to an optical disk drive and secure it with the following **screws**.

   - M2.0×3.0 Flat BIND screw   x2

2. Insert an optical disk drive assembly into the slot and connect it to the connector **CN26** on the system board.

3. Secure the ODD drive with the following **screw**.

   - M2.5X5.0 Flat BIND screw   x1

4.6   Slot in Optical disk drive

NOTE: *Do not apply excessive force to the top of an optical disk drive.*

Do not touch the shaded portion of the figure below, when the drive is removed or installed.

Removing an optical disk drive

The following describes the procedure for removing an optical disk drive (See Figure 4-6-1 to 4-6-3).

1. Remove the **screws** securing Motherboard.

    - M2.5×6.5B   FLAT BIND screw   x3

2. Remove the **Motherboard** and thermal fan.

3. Remove the **screws** to disconnect the slot in ODD

    - M2.0×3.0B   FLAT BIND screw   x2

4. Remove the slot in ODD bracket from right side and left side.

    - M2.0×2.0B   FLAT BIND screw   x4

Figure 4-6-1 Remove an optical disk drive
Figure 4-6-2 Disconnect the Slot in ODD from Motherboard
Figure 4-6-3 Disassemble the bracket from slot in ODD

Installing an optical disk drive

The following describes the procedure for installing an optical disk drive.

1. Attach the **ODD bracket** to an optical disk drive and secure it with the following **screws**.

    - M2.0×2.0 Flat BIND screw   x4

2. Insert an optical disk drive assembly into the slot and connect it to the connector **CN26** on the system board and secure it with the following screws.

    - M2.0×3.0B   FLAT BIND screw   x2

3. Secure Motherboard with following screws.
    - M2.5×6.5B   FLAT BIND screw   x3

4.7 HDD (SECOND HDD)

Removing second HDD-H9.5mm / HDD-H12.5mm

The following describes the procedure for removing the second HDD (See Figure 4-7-1 to 4-7-3).

> *CAUTION:* *Take care not to press on the top or bottom of a HDD. Pressure may cause data loss or damage to the device.*

1. Turn the computer upside down.

2. Remove the following **screws** securing a HDD slot cover and remove a **HDD slot cover**.

   - M2.5×4.0B   FLAT BIND screw   x2

3. Remove the following **screws** securing the **HDD assembly**.

   - M2.5×3.0B   FLAT BIND screw   x2

4. Disconnect the **HDD assembly** from the connector on the system board**.**
Figure 4-7-1 Turn the computer upside down

CAUTION: When a HDD is installed, they are installed in the position as the following
figure.
Figure 4-7-2 Remove the SECOND HDD assembly

5. Remove the following **screws** securing the HDD holder and remove the **HDD holder**.

    -   M3.0×3.0B   FLAT BIND screw   x4
Figure 4-7-3 Remove the screws and HDD holder

Installing Second HDD-H9.5mm / HDD-H12.5mm

The following describes the procedure for installing a HDD.

1. Install a HDD to the **HDD holder** and secure it with the following **screws**.

    ● M3.0×3.5F   FLAT BIND screw   x4

NOTE: *Although they are 3mm head screws, screw torque must be set in 2.5kg-cm for four screws securing the HDD holder.*

---

2. Insert the **HDD assembly** into the HDD slot and connect it carefully to the **MAIN HDD** on the system board.

3. Secure the **HDD assembly** with the following **screw**.

    ● M2.5×3.0B   FLAT BIND screw   x2

    ● M2.5×4.0B   FLAT BIND screw   x2

4.8   Memory module

> *CAUTION:* *The power of the computer must be turned off when you remove a memory module. Remove a memory module with the power on risks damaging the module or the computer itself.*
>
> *Do not touch memory module terminals. Any dirt on the terminals may cause memory access problems.*
>
> *Never press hard or bend a memory module.*

Removing a memory module

To remove a memory module, confirm that the computer is in boot mode. Then perform the following procedure (See Figure 4-8-1 to 4-8-2).

1. Loose the **screw** securing the **memory slot cover**.

    • M2.5×4.0B   FLAT BIND screw   x3

2. Remove the **memory slot cover**.

3. Open the left and right **latches** and remove a **memory module**.
Figure 4-8-1 Remove memory slot cover
Figure 4-8-2 Remove a memory module

Installing a memory module

To install a memory module, confirm that the computer is in boot mode. Then perform the following procedure (See Figure 4-8-3).

1. Insert a **memory module** into the connector of the computer slantwise (terminal side first) and press it to connect firmly.

CAUTION: *The power must be turned off when you insert a memory module. Inserting a memory module with the power on might damage the module or the computer itself.*

Never press hard or bend a memory module.

---

2. Install the **memory slot cover** and secure it with the **screw**.

   - M2.5×4.0B   FLAT BIND screw   x3

3. When the power of the computer is turned on, the computer checks automatically the memory size. Confirm that the new memory is detected correctly.

4. If the memory is not detected, check that it is connected correctly.
Figure 4-8-3 Insert a memory module

4.9 Keyboard

Removing the keyboard

The following describes the procedure for removing the keyboard (See Figure 4-9-1).

CAUTION: *As the keycap may fall out, when handling the keyboard always hold it by the frame and do not touch the keycap.*

1. Upside down the computer.

2. Open the display.

3. Remove KBD holder. Insert your finger into the slot between the KBD holder and the keyboard. Then, lift up the **keyboard cover** to remove it.

4. Loose the **screw** securing KBD Holder.

   M2.5x3.0B   Flat BIND screws   x4

5. Insert your finger into the keyboard slot and keyboard. Then lift up the keyboard to remove it.

6. Disconnect keyboard cable.
Figure 4-9-1 Remove screws for KB Holder

Installing the keyboard

The following describes the procedure for installing the keyboard.

1. Turn the **keyboard** upside down and place it on the palm rest as its face down. Connect the **keyboard flexible cable** to the connector on the system board.

2. Slide and set the **speaker cover assembly** and secure it with the following **screw**.

   - M2.5×3.0B   FLAT BIND screw   x4

3. Install the **keyboard brace** by pressing it from the topside.

4.10 Wireless LAN card

Removing a Wireless LAN card

The following describes the procedure for removing a Wireless LAN card (See Figure 4-10-1 to 4-10-2).

1. Remove the following **screw** of wireless cover securing **wireless LAN card cover** and remove it. And remove screw of wireless board

    - M2.5. x 3.0B   BIND screw   x2

2. Disconnect the **wireless LAN antenna cable** from the connectors on a wireless LAN card

3. Open the left and right latches holding a wireless LAN card and remove a **wireless LAN card** from the **connector** on the system board.

Figure 4-10-1 Wireless LAN card
Figure 4-10-2 Remove a wireless LAN card

Installing a Wireless LAN card

The following describes the procedure for installing a Wireless LAN card.

1. Insert a **wireless LAN card** terminals slantwise into the connector on the computer and press a wireless LAN card and lock the secure screws.

   - M2.5. x 3.0B   BIND screw   x2

2. Connect the **wireless LAN antenna cable** to the terminals on a wireless LAN card.

3. Put the **wireless LAN antenna cable** on the right location from the guide (Antenna cable locate top, USB cable locate bottom and FM cable locate middle).Stick the tape of cable on the surface. If fail to stick, replace tape with new adhesive tape.(see Figure 4-10-3)
Figure 4-10-3 Cables layout on motherboard

4.11 Bluetooth module

Remove a Bluetooth module

The following describes the procedure for removing a Bluetooth module(see Figure4-11-1)

1. Disconnect the Bluetooth cable from motherboard side

2. Remove the following screw from TOP case and remove the Bluetooth bracket

    ● 2.5.0 x 3.0B   BIND screw   x1

3. Remove the Bluetooth module
Figure 4-11-1 Remove a Bluetooth module

Installing a Bluetooth module

The following describes the procedure for installing a Bluetooth module.

1. Insert a **Bluetooth** into the connector on the computer.

2. Connect the Bluetooth cable to the terminals on a Bluetooth and connect it to the motherboard side.

3. Install the Bluetooth bracket and secure it with following screw.

    ● 2.5.0 x 3.0B   BIND screw   x1

4.12   TV Tuner card

Removing a TV Tuner card

The following describes the procedure for removing a TV Tuner card (See Figure 4-12-1).

1. Remove the following **screw** of TOP cover securing and remove it. And remove screw of TV tuner card

    - 2.5.0 x 3.0B   BIND screw   x2

2. Disconnect the **TV antenna cable** from the connectors on a TV tuner card

3. Open the left and right latches holding a TV tuner card and remove a **TV tuner card** from the **connector** on the system board.

Figure 4-12-1 TV Tuner card

Installing a TV Tuner card

The following describes the procedure for installing a TV tuner card.

1. Insert a **TV tuner card** terminals slantwise into the connector on the computer and press a TV tuner card and lock the secure screws.

2. Connect the **TV antenna cable** to the terminals on a TV tuner card.

3. Put the **TV antenna cable** on the right location from the guide(see Figure 4-10-3)

4. Secure **TV tuner card** with the following **screws**

   2.5.0 x 3.0B   BIND screw   x2

4.13 Display assembly

Removing the display assembly

The following describes the procedure for removing the display assembly (See Figure 4-13-1 to 4-13-5).

1. Close the display and turn the computer upside down.

2. Remove the battery pack (See Figure 4-2-1)

3. Remove the Main HDD door screws and open the MAIN HDD Door, remove Optical Drive Disk.

> - M2.5×4.0 FLAT BIND screw   x2
>
> - M2.5×3.0 FLAT BIND screw   x1
Figure 4-13-1 Remove the screws (securing display assembly)

4. Open the SECOND HDD Door.

5. Remove the screws from the bottom side.

- M2.5×6.5 FLAT BIND screw   x11

- M2.5×8.0 FLAT BIND screw   x6

- M2.5×4.0 FLAT BIND screw   x2

- M2.5X3.0 FLAT BIND screw   x1

- M2.5×2.0 FLAT BIND screw   x5
Figure 4-13-2 Remove the screws (from bottom side)

6. Disassemble **KBD Holder** and **Keyboard** screw (See Figure 4-9-1)

- M2.5x3.0   Flat BIND screws   x4

7. Remove the screws from the top side and remove the cover.

- M2.5x6.5   Flat BIND screws   x7

- M2.5x3.0   Flat BIND screws   x2
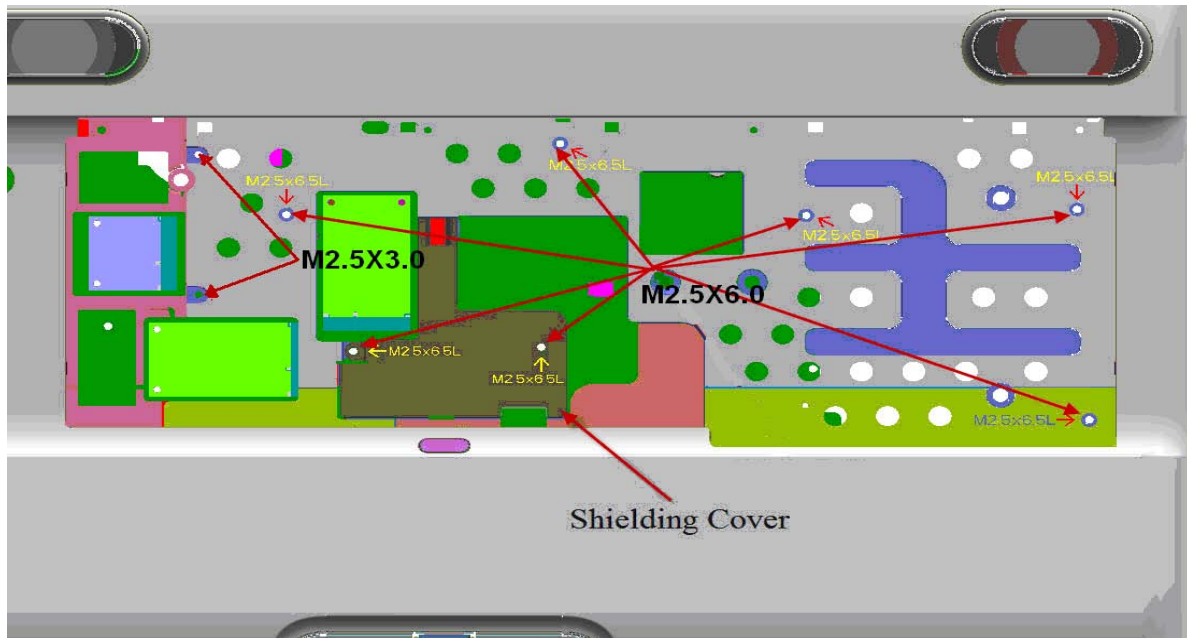

Figure 4-13-3 Remove the screws (from top side)

8. Disconnect the FFC and cables.

9. Disassembly TOP cover.

10. Pull out the **wireless LAN antenna and LCD cables** from the guide.
Figure 4-13-4   Remove the Wireless Antenna and LCD cable

Opening the display to 135degree, and remove the hinge screw.

- M2.5×6.5 FLAT BIND screw   x6   (Locktight)
Figure 4-13-5   Remove the hinge screws

11. Pulling out the **pole of hinge** from the **hole** of hinge assembly, remove the **display assembly** from the base assembly.

Installing display assembly

The following describes the procedure for installing the display assembly.

1. Inserting the **pole of hinge** to the **hole** of hinge assembly, set the **display assembly** on the base assembly.

2. Secure the **hinges** with the following **screws** secure the **display mask** with the following **screws** and stick the **mask seal** on them.

- M2.5×6.5 FLAT BIND screw   x6   (Locktight)

NOTE: *Be sure to apply the locktight to the screws instructed in the figure above.*

3. Connect the **LCD harness** to the connector on the system board.

4. Arrange the wireless antenna cables along the guide (front) and secure them with **guide**.

5. Pass the cables to the back of computer through the **slot**.

6. Arrange the **wireless LAN antenna** along the guide and contact with the connector.

7. Install the LAN board and cover ASSY of the system, secure it with the screws

    - M2.5x6.5   Flat BIND screws   x7

8. Install the KBD **Holder** and **Keyboard** with screws

    - M2.5x3.0   Flat BIND screws   x4

9. Turn the computer downside and Secure the bottom with screws

    - M2.5×6.5 FLAT BIND screw   x11

    - M2.5×8.0 FLAT BIND screw   x6

    - M2.5×4.0 FLAT BIND screw   x2

    - M2.5×3.0 FLAT BIND screw   x1

    - M2.5×2.0 FLAT BIND screw   x5

10. Install battery pack, HDD door and Optical Drive Disk with screws

    - M2.5×4.0 FLAT BIND screw   x2

    - M2.5×3.0 FLAT BIND screw   x1

NOTE: *If Fingerprint or Dust left on LCD screen during disassembly and assembly LCD units, please follow Appendix A to clean it.*

4.14   Top Cover assembly

Removing the Top cover assembly

The following describes the procedure for removing the top cover assembly (See Figure 4-14-1 to 4-14-3).

1. Turn over the computer.

2. Remove the following **screws** securing the top cover assembly from the back and bottom of computer.

    - M2.5×2.0   FLAT BIND screw Back   x5

    - M2.5×6.5   FLAT BIND screw   Back   x11

    - M2.5×8.0   FLAT BIND screw Back   x6

    - M2.5×4.0   FLAT BIND screw Back   x2

    - M2.5×3.0   FLAT BIND screw Back   x1
Figure 4-14-1   Remove the screws (back)

3. Remove the following **screws** securing the top cover assembly from the front of computer. Pull up and remove the **top cover assembly** from the **base assembly**.

    - M2.5x6.5   Flat BIND screws   x7
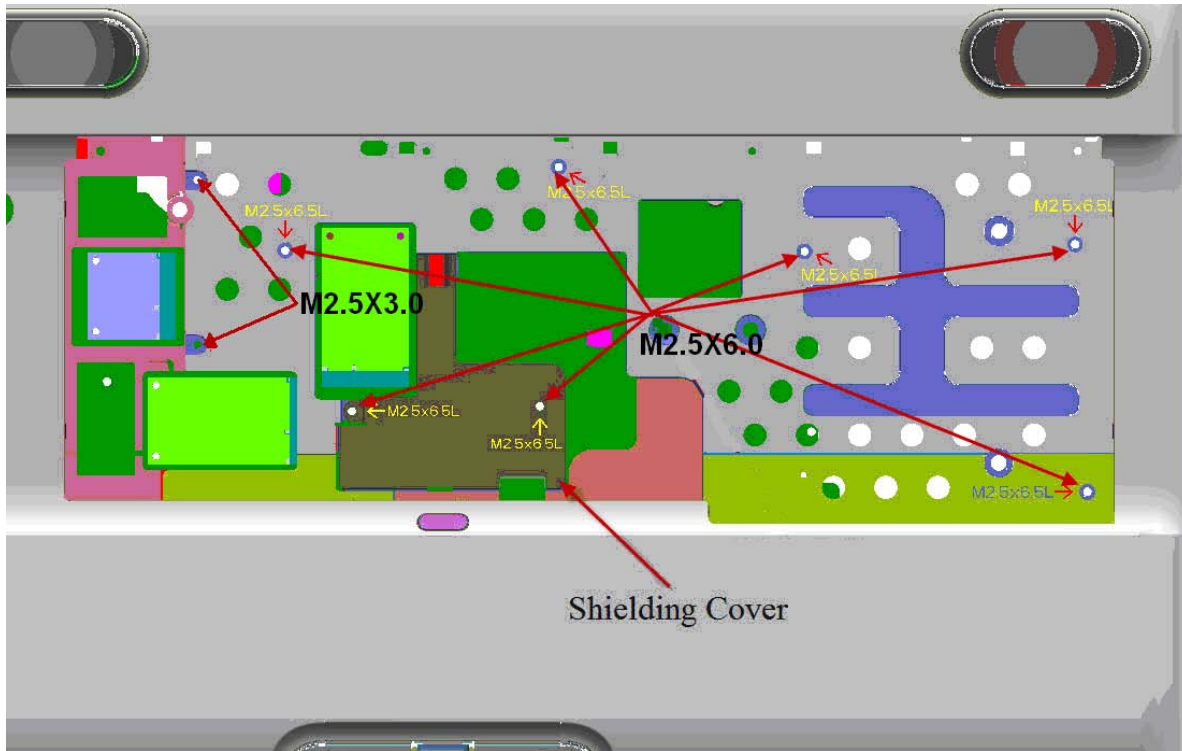

Figure 4-14-2 Remove the screws (front) and top cover assembly

4. Disconnect the **touch pad flat cable/Fingerprint cable** from the connector on the system board.
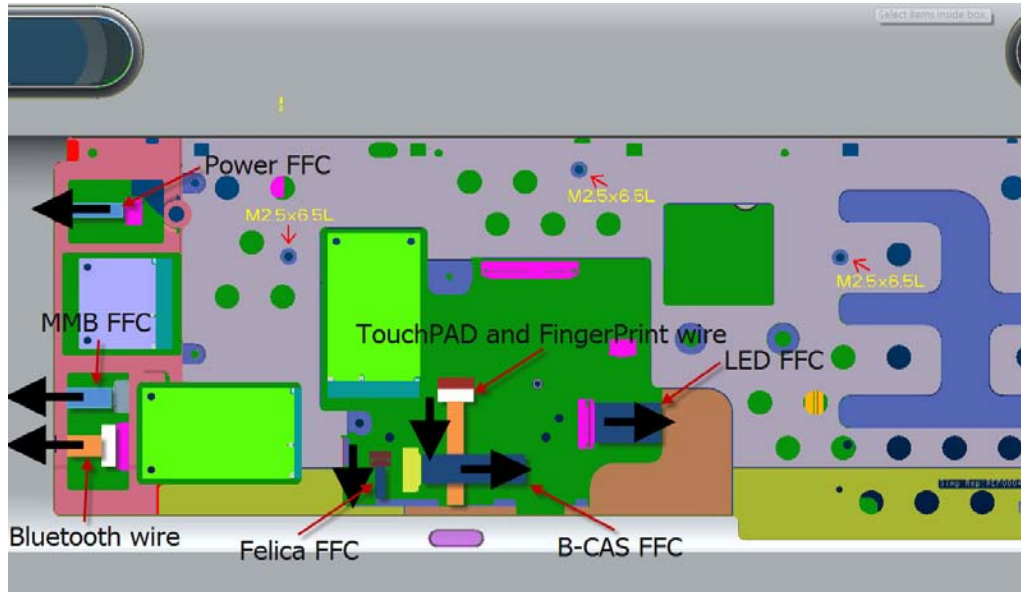

Figure 4-14-3 Disconnect the touch pad flat cable/Fingerprint cable

Installing Top Cover assembly

The following describes the procedure for installing the top cover assembly.

1. Install the top **cover assembly** to the base assembly.

NOTE: *Be careful not to catch the cables between top cover assembly and base assembly.*

2. Connect the **touch pad flat cable** to the connector on the system board.

3. Secure the top cover assembly with following screws from the front of computer.

    - M2.5x6.5   Flat BIND screws   x7

    - M2.5x3.0   Flat BIND screws   x2

4. Secure the top cover assembly with the following **screws** from the back and bottom of computer.

- M2.5×2.0   FLAT BIND screw   x5
- M2.5×6.5   FLAT BIND screw   x11

- M2.5×8.0   FLAT BIND screw   x6
- M2.5×4.0   FLAT BIND screw   x2

- M2.5×3.0   FLAT BIND screw   x1

5. Free the cable from cable-drain when through the antenna cable to PCB hole.

4.15 Touch pad

Removing the touch pad

The following describes the procedure for removing the touch pad (See Figure 4-15-1 to 4-15-3).

1. Peel off the **glass tape** and disconnect the **touch pad flat cable, Fingerprint cable** from the connector on the touch pad.

2. Remove the following **screws** securing the touch pad plate.

   - M2.0×3.0B   SUPER THIN HEAD screw   x10

3. Remove the **touch pad board and touch pad plate**.

4. Peel off and remove the **touch pad** from the top cover assembly.
Figure 4-15-1 Remove the touch FFC and Fingerprint cable
Figure 4-15-2 Loose the M2.5x3 screw
Figure 4-15-3 Remove the touchpad and touchpad board

Installing the touch pad

The following describes the procedure for installing the touch pad.

1. Peel off the separator covering on the sensor portion of a new touch pad.

NOTE: *Do not reuse the touch pad so that it can not be used after peeling off from the computer. Be sure to stick a new touch pad.*

When sticking the touch pad, be careful not to get the bubbles under the touch pad.

---

2. Stick and install the **touch pad** on the top cover assembly.

3. Install the **touch pad plate** and secure it with the following **screws**.

   - M2.5×3.0 SUPER THIN HEAD screw   x10

4. Stick the **insulator** on the touch pad plate.

5. Connect the **touch pad flat cable** to the connector on the touch pad and stick the **glass tape** on the connector.

4.16   USB Board

The following describes for removing the USB board (See Figure 4-16-1).

Removing the USB Board

1. Pull out the **USB cable, Audio cable,** from USB board connector.

2. Loose the below **screws** and then incline pull out **USB board.**

- M2.5x6.5   FLAT BIND screw   x2
Figure 4-16-1 Remove the USB board

Installing the USB Board

The following describes the procedure for installing the USB board.

1. Insert the **USB board** into base case and connect USB board cable, Modem cable

2. Fix the below **screws**

    M2.5x6.5   FLAT BIND screw   x2

NOTE: *Be careful not to catch the cables between top cover assembly and base assembly.*

4.17   B CAS Board

The following describes for removing the B CAS Board (See Figure 4-17-1).

Removing the B CAS Board

1. Pull out the **B CAS FFC** from USB board connector.

2. Loose the below **screws** and then incline pull out B CAS **board.**

- M2.5x3   FLAT BIND screw   x4
Figure 4-17-1 Remove the B CAS Board

Installing the B CAS Board

The following describes the procedure for installing the B CAS board.

1. Insert the **B CAS board** into base case and connect B CAS board FFC.

2. Fix the below **screws**

M2.5x3   FLAT BIND screw   x4

4.18   System Board

CAUTION: *1. when handling the system board, always hold by the edges. Do not touch the printed circuit face.*

2. if replacing with a new system board, execute the subtest01 Initial configuration in section 3.3 "Setting of the hardware configuration". Also update with the latest BIOS

Removing the System Board

The following describes the procedure for removing the system board (See Figure 4-18-1 to 4-18-2).

1.   Disconnect the power cable from the system board.
Power Cable

Figure 4-18-1 Disconnect the power cable

2. Disconnect the **speaker cable, LCD CABLE, WIRELESS ANTENNA, CRT cable, USB cable, FM CABLE, MDC CABLE, and TV-F ANTENNA** from the connector on the system board.

3. Remove the following **screws** securing the fan and the system board and remove the **system board**.

   - M2.5×6.5 screw   x2
   - M2.5×6.5 screw   x3
Figure 4-18-2 Remove the system board

Removing RTC battery

The following describes the procedure for removing the RTC battery unit (See Figure 4-18-3 to 4-18-4).

1. Pull the away the socket of RTC battery and use a clamp to hold RTC battery tightly.
Figure 4-18-3 Pull away from the socket of RTC Battery

2. Rotate battery through the way then remove it.
Figure 4-18-4   Rotate the RTC Battery

Installing the System Board

The following describes the procedure for installing the system board.

1. Secure the system board with the following **screws**.

    M2.5×6.5   screw   x3

2. Secure the fan with the following **screws**.

    M2.5×6.5   screw   x2

3. Connect the **speaker cable, LCD CABLE, WIRELESS ANTENNA, CRT cable, USB cable, FM CABLE, MDC CABLE, and TV-F ANTENNA** to the connector on the system board.

4. Connect the power cable to the connector on the system board

Installing RTC battery

The following describes the procedure for installing the RTC battery unit

(See Figure 4-18-5).

1. Press the force vertically then lock the RTC battery tightly.
Figure 4-18-5 Install the RTC battery

4.19   CPU

Removing the CPU heat sink

The following describes the procedure for removing the CPU heat sink (See Figure 4-19-1 to 4-19-2).

1. Disconnect the **Heat sink cable** from the connector on the system board

2. Remove the following **screws** securing the heat sink holder along 1 to 4.

    - M2×2   SPRING screw   x4

NOTE: When removing the heat sink holder, be sure to remove the screws in the reverse order of the number marked on the holder.

3. Remove the **CPU heat sink**.
Figure 4-19-1 Remove the CPU heat sink

4. Unlock the **CPU** by rotating the **cam** on the CPU socket 120 degrees to the counterclockwise with a flat-blade screwdriver.

5. Remove the **CPU**.
Figure 4-19-2 Remove the CPU

Installing the CPU

The following describes the procedure for installing the CPU (see Figure 4-19-3)

1. Check that the mark of cam is in the unlocking position.

2. Attach the **CPU** to the correct position in the **CPU socket**.

3. Fix the **CPU** by rotating the cam 120 degrees to the clockwise with a flat-blade screwdriver.

4. If there is already silicon grease on the CPU, clean it with a cloth.
   Using a special applicator, apply silicon grease so that the CPU chip on the CPU is completely covered.

5. Please apply 0.1cc silicon grease (Shinetsu 7762) for each repair. And apply

   Thermal pad for N-bridge, VGA&V-RAM for each repair

NOTE: Apply the silicon grease enough to cover the chip surface using the special applicator. Thermal pad is fixed for each one, no need special applicator.
Figure 4-19-3 Apply silicon grease

6. Install the **CPU heat sink** and **heat sink holder** and secure them with the following **screws** along 1 to 4.

    M2×2   SPRING screw   x4

7. Connect the **Heat sink cable** to the connector on the system board

---

NOTE: *When securing the heat sink holder, be sure to secure the screws in the order of the number marked on the holder.*

4.20 LCD unit / FL inverter

> *CAUTION: When replacing a LCD, it is required that SVP parameter is set. Update with the latest EC/KBC as described in Appendix H "EC/KBC Rewrite Procedures".*

Removing the LCD unit / FL inverter

The following describes the procedure for removing the LCD unit and FL inverter (See Figure 4-20-1 to 4-20-4).

Remove Screw MYLAR cover X8

1. Remove the following **screws** securing the display mask

    M2.5×6.5   screw   X8

2. Insert your finger between the edge of the display mask and the **LCD**, and remove the **display mask** while releasing the latches of display mask.

M2.5*6.5
Figure 4-20-1 Remove the display mask

---

3. Pull out one **insulator** and peel off the other one adhered to the inverter.

4. Disconnect the **LCD harnesses** from the connectors **CN1** on the inverter.

5. Disconnect the **HV harnesses** from the connectors **CN2** on the inverter.

6. Remove the **FL inverter** while peeling off the **double-sided tape**.
Figure 4-19-2 Remove the inverter

7. Remove the following **screws** securing the LCD unit.

   - M2.5x4.0 screw   x2

   - M2.5x5.0 screw   x8

8. With the bottom edge of the LCD unit on the display cover, lift only the top edge of the LCD unit. After peeling off the **CONDUTIVE tape**, disconnect the LCD harness from the connector on the back of the LCD.

9. Remove the **LCD unit**.
Figure 4-20-3 Remove the LCD unit

10. Remove the following **screws** securing the LCD support (LCD unit side) and remove the **hinge** from the LCD unit.

- M2.0x2.5 screw x8

Figure 4-20-4 Remove the LCD hinge

Installing the LCD unit/FL Inverter

The following describes the procedure for installing the LCD unit and FL inverter.

Install the LCD supports (LCD unit side) and hinge to the LCD and secure them with the following **screws**.

- M2.0×2.5 BINK   screw   x8

1. Stand the **LCD unit** on the display cover and connect the **LCD harness** to the connector on the back of LCD.

2. Stick the **conductive tape** on the connector of LCD harness.

3. Secure the LCD unit with the following **screws**.

   - M2.5x4.0 screw   x2

   - M2.5x5.0 screw   x8

4. Connect **LCD harnesses** to the connector **CN1** of the inverter.

CAUTION: *Be careful not to connect the LCD harnesses to the wrong connectors of FL inverter.*

---

5. Connect **HV harnesses** to the connector **CN2** of the FL inverter.

6. Install the **display mask** while fitting the latches.

7. Secure the display mask with following **screws**

   M2.5×6.5   screw   X8

8. Cover screws with Screw MYLAR cover   X8

NOTE: *When installing the display mask, make sure there is no gap between the display mask and the display cover.*

4.21   Web Camera module

Removing Web Camera module

The following describes the procedure for removing the Web Camera module.

(See Figure 4-21-1 to 4-21-2).

1. Pull off the connector of Web Camera module.
Figure 4-21-1 Remove the connector of Web Camera module

2. Peel off the glue of Web Camera module.
Figure 4-21-2 Peel off the glue of Web Camera module

Installing Web Camera module

The following describes the procedure for installing the Web Camera module.

1. Pull in the glue of Web Camera Module.

2. Connect the connector of Web Camera module.

4.22 Speaker Box

Removing Speaker Box

The following describes the procedure for removing Speaker Box.

(See Figure 4-22-1 to 4-22-3).

1. Remove the following **screws** securing Speaker Box.

   ● M2.5×2.0 screw   x 4
Figure 4-22-1   Removing the securing screws at left side.
Figure 4-22-2 Removing the securing screws at right side.

2. Removing the Speaker Box.
Figure 4-22-3 Removing the Speaker Box.

Installing Speaker Box

The following describes the procedure for installing Speaker Box.

1.   Installing the Speaker Box.

2.   Securing Speaker Box of following **screws**.

●   M2.5×2.0   screw   x 4

4.23 Application for Thermal pad and grease on CPU, North Bridge, and VGA board (see Figure 4-22-1 to 4-22-3)

I. For Silvis thermal pad on North Bridge and grease on CPU
Figure 4-23-1 Intel &AMD Thermal pad on North Bridge

RAW PN	TSB PN	Vendor Description
JXTZ1024010	A000048640	THERMAL PAD INT NB BS TZ1(JXTZ1024,3A)
XY0GFCM1000	A000018440	THERMAL GREASE GFC-M1

II. Use grease and Thermal pad on VGA

1. 0.15cc for one repair.
Figure 4-23-2 Apply silicon grease for North Bridge

2. Thermal pad and grease used on VGA thermal module.
Figure 4-22-3 Thermal pad position

RAW PN	TSB PN	Vendor Description
JXTZ1027010	**A000048650**	THERMAL PAD VGA V-RAM AD(JXTZ1027,3A)
JXTZ1026010	**A000048660**	THERMAL PAD VGA CHOKE AD(JXTZ1026,3A)
XY0GFCM1000	**A000018440**	THERMAL GREASE GFC-M1

NOTE: Thermal pad is fixed for each one, no need special applicator and can re-use.

Appendix A   Handling the LCD Module

Precautions for handling the LCD module

The LCD module can be easily damaged during assembly or disassembly. Observe the following precautions when handling the LCD module:

1. When installing the LCD module in the LCD cover, be sure to seat it so that it is properly aligned and maximum visibility of the display is maintained.
2. Be careful to align the holes at the four corners of the LCD module with the corresponding holes in the LCD cover before securing the module with screws. Do not force the module into place, because stress can affect its performance.

   Also, the panel's polarized surface is easily scarred, so be careful when handling it.

3. If the panel's surface gets fingerprint or dust, put on gloves and wipe it with static electricity cloth. If it is still dirty, drop some cleaning alcohol on the surface and wipe it again

   If the surface is much more fingerprint or dust, we recommend a CRT cleaning agent. Apply the agent to a cloth and then wipe the panel's surface. Do not apply cleanser directly to the panel.

   If dust still exists, please use ionic FAN which can avoid static electricity to deal with it.

4. If water or other liquid is left on the panel's surface for a long period, it can change the screen's tint or stain it. Be sure to quickly wipe off any liquid with cloth or ionic FAN

5. Glass is used in the panel, so be careful not to drop it or let it strike a hard object, which could cause breakage or cracks.
6. CMOS-LSI circuits are used in the module, so guard against damage from electrostatic discharge. Be sure to wear a wrist or ankle ground when handling the module.
7. Do not expose the module to direct sunlight or strong ultraviolet rays for long periods.

8. Do not store the module at temperatures below specifications. Cold can cause the liquid crystals to freeze, lose their elasticity or otherwise suffer damage.
9. Do not disassemble the LCD module. Disassembly can cause malfunctions.
10. If you transport the module, do not use packing material that contains epoxy resin (amine) or silicon glue (alcohol or oxide). These materials can release gas that can damage the panel's polarization.

Notes:

1. *   Scan codes differ by mode.
2. *   Scan codes differ by overlay function.
3. *   Combined with the **Fn** key makes different codes.
4. *   **Fn** key does not generate a code by itself.
5. *   This key corresponds to key No. 42 in a 102-key model.
6. *   Refer to Table D-6, No. 124 key scan code.
7. *   Refer to Table D-7, No. 126 key scan code.

Note : The table above shows scan codes with the left **Shift** key. In combination with the right **Shift** key, scan codes are changed as listed below:

	With left **Shift**	With right **Shift**
Set 1	E0 AA _____	E0 B6
	E0 2A _____	E0 36
Set 2	E0 F0 12 _____	E0 F0 59
	E0 12 _____	E0 59
