Quality*	Cluttered spectrum- may interfere with baby monitors and other 900MHz cordless users	May interfere with microwave ovens and wireless networking products	May interfere with microwave ovens and wireless networking products, but will resist better	New DECT standard will increase range, virtually eliminate interference and improve sound quality	Newest spectrum with little interference
Features	Everyday phone without damaging the budget	Value phone with multiple options and colors	Some 2.4GHz DSS phones have two-handset capability	Handsets can be used as two-way communicators away from the base	5.8GHz analog line will be launching in 2003, \$39.99 – \$79.99

*To help select a cordless phone that's right for you, consider how you want to use it, what environment you live in and how many people use the phone. All frequency levels are clear, but some perform better in urban or rural areas. Of course, test the phone for comfort in hand and next to your ear.
