

1. “What are the MPR Products?”

WJ designs and makes multi-protocol, UHF RFID Cards that operate in the 902-928MHz ISM band: the MPR 5000 and MPR 6000. Both of these products utilize the PCMCIA Type II package and 68-pin parallel communications interface commonly found in laptop, handheld and other computing platforms. The units utilize standard air protocols including EPC Class 0, EPC Class 1 and 0+. These units utilize Flash memory to enable upgradeability for additional features or capabilities like the inclusion of ISO 18000-6, UHF Gen 2 or ETSI . Datasheets and additional information can be found on the WJ website and by searching with the keyword “readers”.
