## Product Description

The AH202 is a 1-Watt driver amplifier that offers excellent dynamic range in a low-cost, lead-free/RoHS-compliant 6x6 mm 28-pin QFN surface-mount package. This device provides its optimum P1dB and OIP3 performance when biased at + 11 V; It can also be biased as low as +9 V for lower power applications.

The backside metalization provides excellent thermal dissipation while allowing visible evidence of solder reflow across the bottom of the package on a SMT board. Superior thermal design allows the product an MTTF of over 100 years at a mounting temperature of +85° C. All devices are 100% RF & DC tested.

The product is targeted for use as a driver amplifier for wireless infrastructure or CATV applications where high linearity and medium power is required.

### Application Circuit PC Board Layout

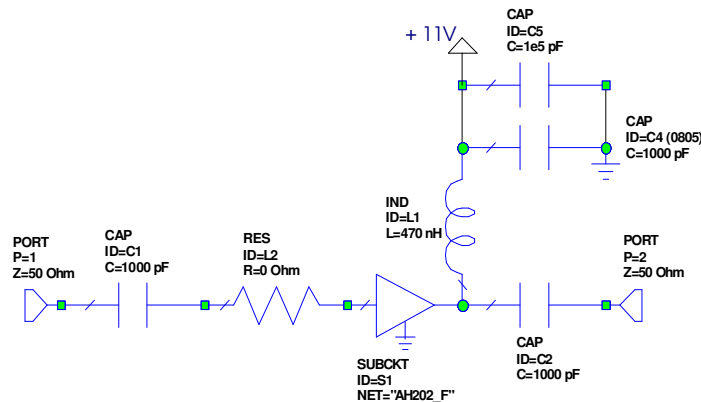

Circuit Board Material: .014" Getek ( $\epsilon_r=4.2$ ), four layer, 1 oz copper  
Microstrip line details: width = .026", spacing = .026"

### Reference Design: 50-800 MHz

The AH202 is suitable for applications between 50 – 800 MHz without any requirements for input or output matching. Only bypass and blocking capacitors and an RF bias choke are needed for operation. A user can simply request an AH202-PCB900 Evaluation Board and replace components C1, C2, C3, C6, L1, and L2 to the values shown below to evaluate the device.

Frequency	MHz	50	200	400	600	800
S21 – Gain	dB	18	17.9	17.5	17.0	16.3
S11 – Input Return Loss	dB	-13	-17	-15	-12.4	-10.3
S22 – Output Return Loss	dB	-13	-15	-17	-22	-28
Output P1dB	dBm	+30				
Output IP3 (+10 dBm / tone, 10 MHz spacing)	dBm	+47				
Supply Bias	dB	+11 V @ 330 mA				

#### Notes:

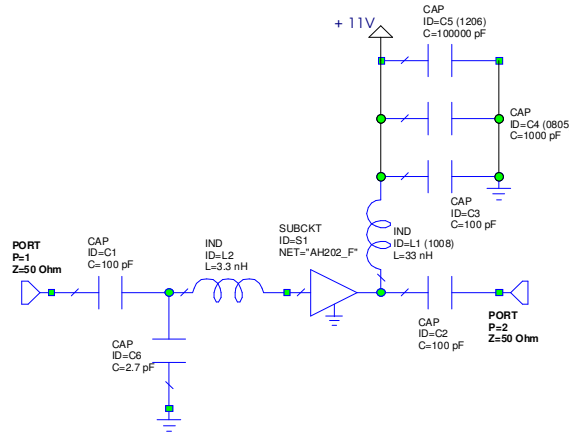

- R=0 Ω (at designator L2) is used as a place holder for a different application circuit. It can be removed from the circuit without any effect to the performance.
- The microstrip line is weakly co-planar. Ground planes around it are not necessary for operation of the AH202.
- Adequate heat sinking is required for the device. Further mounting instructions are shown in the AH202 datasheet.
- The RF choke should be a wirewound ceramic type to insure sufficient current carrying capacity. Coilcraft's 1008 CS series is recommended (part #1008CS-471X\_B\_).

### Thermal Specifications

Parameter	Rating
Operating Case Temperature	-40 to +85 °C
Thermal Resistance, Rth <sup>(1)</sup>	17.5 °C / W
Junction Temperature, Tj <sup>(2)</sup>	152 °C

- The thermal resistance is referenced from the hottest part of the junction to the backside copper paddle.
- This corresponds to the typical biasing condition of +11V, 350 mA at an 85° C case temperature. A minimum MTTF of 1 million hours is achieved for junction temperatures below 160° C.

Backside paddle is RF and DC ground. Pin 7 is required to be not connected or grounded for the AH202 to be functional.
