Smart choice for power

The Xantrex PowerHub is an exciting new product that will attract new customers to your business.

A Clean, Green, Backup Power Solution

The Xantrex PowerHub is a combination of an inverter/charger module capable of delivering up to 1800 watts of household power. **It is the first backup power solution to operate with solar and wind inputs.** Power from a generator or the utility grid can also be used with the PowerHub system to recharge its batteries. The PowerHub provides an affordable, high-output, primary power solution for an off-grid cottage or cabin, as well as backup power for grid-connected homes when the power goes out. It is scalable up to 400 amp-hours of energy, allowing customers to build their system based on their power requirements.

- ▶ Never worry about running out of power – renewable power sources, solar and wind, sustain the PowerHub's battery charge indefinitely
- ▶ An excellent alternative to a generator – designed for indoor use, with no fuel, fumes or noise
- ▶ Add it to a grid-tie solar energy system for backup power

Product Features
