

Sun Tie XR Remote Monitor (STRMUPG)

How much power has my Sun Tie XR produced today?

The Sun Tie XR Remote Monitor offers the convenience of reviewing your Sun Tie XR's power production from the comfort of your home. The STXR Remote Monitor can be located up to fifty feet away from your inverter's installation. This monitor displays the output of your system over days, weeks and even years.

The STXR Remote Monitor provides all the information you need to answer any questions regarding the power production of your Sun Tie XR. The STXR Remote Monitor's first screen displays the status of the STXR Inverter as it produces power and shows a daily cumulative reading of its solar production in Watthours (Whrs).

Scroll through to the second screen for information in the form of a cumulative monitor that can be reset to keep track of your power production as you see fit. There is also a non-resettable cumulative function that totals all of the power your system has generated from the very first day of your system's installation.

Advanced screens show additional data such as instantaneous power production as well as AC and DC voltages. View your system's performance under varying conditions such as time of day, weather and array shading.

Become your own power company

Many states encourage the installation of renewable energy grid-tie systems. Some states offer financial incentives and tax rebate programs that help to offset the initial cost of a grid-tie system making renewable energy a viable, cost effective energy option.

The Sun Tie XR and Remote Monitor make producing green power easier than ever before.

Visit www.gridtie.com to find out about incentives in your state.
