# *Installation tips*
Please read over these tips before installing your Phaser 140 Color Printer.

Installing the print head

The print head is packaged in a sealed plastic box (**1**). When unpacked, the print head appears as shown (**2**).

4686-7-1

Before installing the print head, be sure to remove the packing material.

4868-7-3

For more information on installing the print head, see "Installing the print head," in Chapter 2 of the user manual.

Installing ink cartridges

When installing ink cartridges, be sure to press down on the cartridge until it snaps into place.

4868-7-2

For more information on installing ink cartridges, see "Installing ink cartridges," in Chapter 2 of the user manual.

First-time power-up

When you turn on the printer *for the first time,* the printer purges the ink jets. This first-time printhead initialization takes a few minutes. When the first-time power-up is complete, the printer's front panel displays `ready` and the two green lights on the front panel are lit.

SELECT

⊙

When the first-time power-up is complete, the printer's front panel may display `ink out` instead of `ready`.   If this happens, press the **SELECT** button. The printer purges the ink jets again before displaying `ready`. In rare cases, the front panel will display something other than `ready` after the second purge. If this happens, turn the printer off, then on again. The printer will power-up correctly the second time.

The printer is shipped with the startup page enabled. However, when you turn on the printer *for the first time*, or when you install a new print head, you may not get a startup page. The printer will print a startup page on all subsequent power-ups, until the startup page is disabled.

For more information on the printer's power-up sequence and the startup page, see "Connecting the power and turning on the printer," in Chapter 2 of the user manual.
