

If your Phaser 480X printer is shared by other users on a network

Another user may use the downloadable color correction utility files, or the printer's rear panel switches, to change the printer's default color correction setting. If this situation occurs, the prints you make with the **Use Printer Setting** option in a Tektronix driver, or with a non-Tektronix driver, may not print as expected.

Application color corrections

Some applications perform color corrections to improve screen-to-printer color matching. The color correction options in the Tektronix drivers adjust colors in the printer after the application has performed its color corrections.

- If the application uses CIE (Commission Internationale de l'Eclairage) colors, the Tektronix corrections will not be applied.
- If you select a color correction option in the driver other than **None**, the selection may override some application features.
- If you try one of the driver's other options and the printed results are not what you expected, then select the **None** option and try reprinting your image.

If you are using a non-Tektronix driver

To use the color corrections with a non-Tektronix driver, use the downloadable utility files or the printer's rear panel switches.
