# Downloading files from Windows

You can use the **Copy** command in the Windows **File Manager** to download PostScript files to the printer.

1. Locate the files you want to use either on the Phaser 480X CD-ROM or on the Windows 3.1 Driver and Printer Utilities diskette. You may want to copy the files to your hard disk if you plan to use them often.

2. In Windows, double-click the **File Manager** icon in the **Main** window.

3. Locate the drive and directory or subdirectory containing the printer's utility files.

4. Select the utility file you want to send to the printer, for example *RESET.PS*.

5. From the **File** menu, select **Copy**. The **Copy** dialog box appears. The utility file you selected is listed in the **From** field.

6. In the **To** field, type the port your printer is connected to. For example, type **LPT1:** for a parallel port connection. Click **OK**.

7. If the **Confirm File Replace** dialog box appears, click **Yes** to continue. The file is downloaded to the printer.
