

# Using a Tektronix printer driver for the Macintosh

The Phaser 480X CD-ROM and the Macintosh Printer Drivers diskette, each include two Macintosh printer drivers that allow you to select page sizes, TekColor color corrections, media types, and a combine separations option for a Phaser 480X printer.

## Phaser 480X driver

- The Phaser 480X driver is a Tektronix-modified version of Apple's LaserWriter 7.1.2 printer driver.
- Use the Phaser 480X driver if you are using System Software 7.0 and later.
- If you are using QuickDraw GX and System Software 7.5, you must *disable* QuickDraw GX *before* using this driver; the Phaser 480X driver does not work with QuickDraw GX.

## Phaser 480X GX driver

- The Phaser 480X GX driver is a Tektronix driver for QuickDraw GX.
- Use the Phaser 480X GX driver if you are using QuickDraw GX and System Software 7.5.
- The Phaser 480X GX driver works with QuickDraw GX applications and with non-QuickDraw GX applications. However, not all printer features are supported by non-QuickDraw GX applications.
