

Problems with image size and position

Printed images are off-set

Check your application for correct image sizing.

Part of the image is cut off

- Check your application for image sizing.
- Make sure that you are using a Phaser 480X driver and have selected the correct page size. If you select the incorrect page size, the image may be cut off.
- If the **TRANSFER ROLL** indicator is blinking, you have installed a short (A/A4) transfer roll and long (B/A3/WB) paper, which causes part of the image to be cut off.

On a Macintosh, printed image has shifted or margins are incorrect

- Make sure that you have installed the Phaser 480X printer driver onto your Macintosh so that you can select the correct page sizes from the driver.
