IMPORTANT NOTICE!

- Please read this manual carefully to become familiar with the features of this transceiver.
- Do not hold the transceiver so that the antenna is very close to (or touching exposed parts of) the body, especially the face or eyes, while transmitting. The transceiver will perform best if the microphone is 3 to 5 cm away from the mouth and the transceiver is vertical.
- Do not place the transceiver in excessively dusty, humid, or wet areas, nor on unstable surfaces.
- Refer service of this apparatus to qualified technicians only.

When using the FNB-64 Ni-Cd Battery Pack

- To install the battery, hold the transceiver with your hand, so your palm is over the speaker and your thumb is on the top of the Belt Clip. Insert the battery pack into the battery compartment on the back of the radio while tilting the Belt Clip outward, then close the Battery Pack Latch until it locks in place with a "Click."

- To remove the battery, turn the radio off and remove any protective cases. Open the Battery Pack latch on the bottom of the radio, then slide the battery downward and out from the radio while unfolding the Belt Clip.

Caution!: Do not attempt to open any of the rechargeable Ni-Cd packs, as they could explode if accidentally short-circuited.

Low Battery Indication

- As the battery discharges during use, the voltage gradually becomes lower. When the battery voltage reaches 6.7 volts, substitute a freshly charged battery and recharge the depleted pack. The **TX/BUSY** indicator on the top of the radio will blink *red* when the battery voltage is low.
- Avoid recharging Ni-Cd batteries often with little use between charges, as this can degrade the charge capacity. We recommend that you carry an extra, fully-charged pack with you so the operational battery may be used until depletion (this "deep cycling" technique promotes better long-term battery capacity).

Battery Charging

- Install the supplied **FNB-64** Ni-Cd battery pack onto the transceiver. Ensure that the transceiver is switched off.
- Plug the **NC-77** into the AC line outlet.
- Insert the battery pack into the **NC-77**; the antenna jack should be at the left side when viewing the charger from the front.
- If the battery pack is inserted correctly, the RED indicator will glow. A fully-discharged pack will be charged completely in 15 hours.

When using the FBA-25 Battery Case

The **FBA-25** Battery Case allows operation of the **VX-146** using six "AA" size Alkaline batteries.

When installing batteries, inset the (-) end first, then press in the (+) end so the battery snaps into place. Always replace six batteries at the same time.

To install the Battery Case into the transceiver, it is same manner as the Ni-Cd Battery Pack, described previously.

Note: The **FBA-25** must not be used with rechargeable cells.

MICROPROCESSOR RESETTING

All transceiver settings can be reset to their factory-default states using the following power-on routines.

- Turn the transceiver off.
- Press and hold the **[BELL]**, **[SCAN]**, and **MONITOR** key while turning the radio on. A "ROM CLR" will appear on the display.
- Press the **PTT** switch to reset the transceiver (Press the **MONITOR** key to cancel the resetting).

BASIC OPERATION

Preliminary Steps

- Install a charged battery pack onto the transceiver, as described previously.
- If you have a Speaker/Microphone, we recommend that it not be connected until you are familiar with the basic operation of the **VX-146**.

Operation Quick Start

- To turn the top panel's **VOL/PWR** knob clockwise to turn on the radio off.
- Turn the top panel's **CH** selector knob to choose the desired operating channel.
- Rotate the **VOL/PWR** knob to set the volume level. If no signal is present, press and hold the **MONITOR** key (the lower button on the left side) more than one second; background noise will now be heard, and you may use this to set the **VOL/PWR** knob for the desired audio level.
- Press and hold the **MONITOR** key more than one second (or press the **MONITOR** key twice) to quiet the noise and resume normal (quiet) monitoring.
- To transmit, press and hold the **PTT** switch. Speak into the microphone area of the front panel grille (upper left-hand corner of the display) in a normal voice level. To return to the Receive mode, release the **PTT** switch.
- If a Speaker/Microphone is available, remove the plastic cap and its two mounting screws from the right side of the transceiver, then insert the plug from the Speaker/Microphone into the **MIC/SP** jack; secure the plug using the two screws supplied with the Speaker/Microphone. Hold the speaker grille up next to your ear while receiving. To transmit, press the **PTT** switch on the Speaker/Microphone, just as you would on the main transceiver's body.

Note: Save the original plastic cap and its mounting screws. They should be re-installed when not using the Speaker/Microphone.

Keypad Locking

The **VX-146**'s keypad may be locked out to prevent accidental changing of its setting.

- Press and hold the **[BELL]** key for one second to lock the keypad.
In the LOCK mode, the display will show "-LOCK-" when you touch a key on the keypad.
- To turn the lock feature off, press and hold the **[BELL]** key for one second.

ADVANCED OPERATION

Scannig

The Scanning feature is used to monitor multiple channels programmed into the transceiver. While scanning, the transceiver will check each channel for the presence of a signal, and will stop on a channel if a signal is present.

- To activate scanning:
Press the **[SCAN]** key momentarily.
The scanner will search the channels according to the scan mode ("Normal Scan" or "Follow-ME Scan": determined via the MENU mode), looking for active ones; it will pause each time it finds a channel on which someone is speaking.
- To stop scanning:
Press the **[SCAN]** key momentarily.

How to Skip(Omit) a Channel during Scan Operation

When you have some very active channels, you may wish to skip them when scanning, but still have them available for manual selection.

- Rotate the **CH** knob to select the channel to be skipped during scanning.
- Press and hold the **[SCAN]** key for one second. A small "SKIP" indicator will appear to the display, indicating it is to be ignored during scanning.
- To re-institute the channel into the scanning loop, repeat the above two steps.

Remember that the "Skipped" channel will always be accessible via manual channel selection methods using the **CH** knob; the above procedure only removes a channel from the *scanning* loop.

CTCSS Operation

"CTCSS" is a selective calling system which uses a continuous, very-low-frequency tone that is filtered out so as not heard. If many stations are using the same channel frequency, CTCSS will keep your radio's receiver squelched until a CTCSS tone received matching the CTCSS tone you have selected for your radio. If CTCSS is turned off, any signal received can open your radio's squelch.

- Rotate the **CH** knob to select a channel for CTCSS operation.
- Press the **[MODE]** key twice, then press the **[BELL]** or **[SCAN]** key so that the "-CTCS" appears on the display; this activates the CTCSS.
- Press the **[MODE]** key momentarily, then select the desired CTCSS Tone number by pressing the **[BELL]** or **[SCAN]** key.
- Press the **[MODE]** key momentarily to save the new settings and activate the CTCSS.
- Press the **MONITOR** key momentarily to disable the CTCSS temporarily to listen to the (muted) signal from the other station. Press the **MONITOR** key again to activate the CTCSS.
- To disable the CTCSS operation, press the **[MODE]** key twice, then press the **[BELL]** or **[SCAN]** key so that the "-OFF" appears on the display, and press the **[MODE]** key again.

DCS Operation

"DCS" is similar in use to CTCSS, except DCS uses the digital codes for more reliable operation.

- Rotate the **CH** knob to select a channel for DCS operation.
- Press the **[MODE]** key twice, then press the **[BELL]** or **[SCAN]** key so that the "-DCS" appears on the display; this activates the DCS.
- Press the **[MODE]** key momentarily, then select the desired DCS Code number by pressing the **[BELL]** or **[SCAN]** key.
- Press the **[MODE]** key momentarily to save the new settings and activate the DCS.
- Press the **MONITOR** key momentarily to disable the DCS temporarily to listen to the (muted) signal from the other station. Press the **MONITOR** key again to activate the DCS.
- To disable the DCS operation, press the **[MODE]** key twice, then press the **[BELL]** or **[SCAN]** key so that the "-OFF" appears on the display, and press the **[MODE]** key again.

BELL Operation

During CTCSS or DCS operation, you may set the transceiver up such that a "-CALLED-" appears on the display you to the fact that a call is coming in.

- Set the transceiver up for CTCSS or DCS operation, as described previously.
- Press the **[BELL]** key momentarily to activates the BELL feature ("BELL ON" will appear on the display).
- When a station calls you whose transceiver is sending a CTCSS tone or DCS code which matches that set into your radio, the "-CALLED-" will appear on the display.
- To disable the BELL operation, press the **[BELL]** key momentarily ("BELL OFF" will appear on the display).

Bell Ringer Operation

If you activate the bell ringer via the MENU mode, a ringing "bell" sound alerts you to the fact that a call is coming in. Here is the procedure for activating the bell ringer.

- Press and hold in the **[MODE]** key while turning the transceiver on to activate the MENU mode.
- Press the **[BELL]** or **[SCAN]** key to select the MENU item ("C_BP").
- Press the **[MODE]** key momentarily to enable adjustment of the bell ringer.
- Press the **[BELL]** or **[SCAN]** key to set the desired number of rings of the bell. The available choices are 1, 3, 5 rings or OFF.
- Press the **[MODE]** key momentarily to save your new setting, then press the **PTT** switch to exit the MENU mode.
- When a station calls you whose transceiver is sending a CTCSS tone or DCS code which matches that set into your radio, the bell will ring in accordance to this programming.

ARTS Operation

“ARTS” is a transponder feature, available when DCS is engaged, which will alert two ARTS-equipped radios when an “Out of Range” condition exists. The stations can then move to a better location to re-establish communications.

- Rotate the **CH** knob to select a channel for ARTS operation.
- Press the **[MODE]** key twice, then press the **[BELL]** or **[SCAN]** key so that the “-ARTS” appears on the display; this activates the ARTS.
- Press the **[MODE]** key momentarily, then select the desired DCS Code number by pressing the **[BELL]** or **[SCAN]** key.
- Press the **[MODE]** key momentarily to save the new settings and activate the ARTS.
- Every 55 seconds, your radio will transmit a “polling” call to the other station. When that station responds with its own ARTS polling signal, the display will change to “INRANGE” to confirm that the other station’s polling code was received in response to yours.
- To exit ARTS operation and resume normal functioning of the transceiver, press the **[MODE]** key twice, then press the **[BELL]** or **[SCAN]** key so that the “-OFF” appears on the display, and press the **[MODE]** key.

Channel Programming

You may change the operating frequency (from among the eight available channel frequency) of the channel selected by the **CH** knob. This function may be useful if you wish to change the order in which the frequencies are selected by the **CH** knob.

- Rotate the **CH** knob to select the channel on which you wish change the operating frequency.
- Press the **[MODE]** key momentarily, then select the desired Channel by pressing the **[BELL]** or **[SCAN]** key.
- Press the **[MODE]** key twice to save the new settings.

MENU MODE

The MENU Mode allows certain aspects of your radio’s configuration to be customized for your personal operating convenience. We do not recommend that any of the default settings be changed, however, until you are thoroughly familiar with the operation of the **VX-146**.

- Press and hold in the **[MODE]** key while turning the transceiver on to activate the MENU mode.
- Press the **[BELL]** or **[SCAN]** key to select the MENU mode you wish to view and/or modify.
- Once you have selected the desired MENU mode item, press the **[MODE]** key momentarily to modify the setting for the item.
- Press the **[BELL]** or **[SCAN]** key to change the setting of the item (ON to OFF, etc).
- Press the **[MODE]** key momentarily to save your new setting (Press the **MONI-TOR** key to cancel the setting).
- If you need to change more than one MENU mode item, repeat steps 2 - 5.
- Press the **PTT** switch to exit the MENU mode.

LAMP

Function: LCD Illumination mode

Available Values: ON/OFF

Default Setting: ON

ON: The lamp will be activated for 5 seconds when the any key on the keypad is pressed.

OFF: Disable the illumination lamp.

MONI

Function: Define the accessory pin of the **MIC/SP** jack of the radio.

Available Values: NOR/EXT (Default Setting: NOR)

When the radio use with the optional **MH-45B4B** Speaker/Microphone, this item set to “NOR.” When the radio use with the optional **VC-25** VOX Headset, this item set to “EXT.”

TAG

Function: Programming an Alpha/Numeric label for the opening message.

To programming an Alpha/Numeric label.

Select this Menu Item.

Press the **[MODE]** key to enable modifying the label.

Press the **[MODE]** key again, to begin modifying of first digit of the label.

Press the **[BELL]** or **[SCAN]** key to select the first digit of the desired label.

When you have made your selection, press the **[MODE]** key momentarily to move the next character.

Repeat the previous step to program the remaining letters, numbers, or symbols of the desired label. A total of eight characters may be used in the creation of the label.

When you have completed the creation of the label, press the **[MODE]** key momentarily to save the label.

Default Setting: SELFTEST

SQL

Function: Squelch Level Setting

Available Values: 0 - 12 (Default Setting: 4)

Select a setting for this Menu Item which just silences the receiver when no signal is present. Use the lowest setting which will keep the receiver quiet between incoming transmissions.

M_dB

Function: Microphone Input Sensitivity Setting

Available Values: -6/0/+6 dB (Default Setting: 0 dB)

C_BP

Function: Select the BELL ringer repetitions

Available Values: 1/3/5/OFF (Default Setting: 3)

S_RT

Function: Set the delay time for scanning resumption

Available Values: 2S/3S/4S/5S (Default Setting: 2S)

S_MD

Function: Select the Scan mode

Available Values: NOR/FM (Default Setting: NOR)

NOR: Activate the Normal Scan. The Normal Scan feature is used to monitor multiple channels of the radio.

FM: Activate the Follow-Me Scan. The Follow-Me Scan feature checks a User assigned Priority Channel (determined via the **CH** knob) regularly as you scan the other channels.

SAVE

Function: Enable/disable the Battery Save

Available Values: ON/OFF (Default Setting: ON)

BEEP

Function: Keypad Beeper On/Off

Available Values: ON/OFF (Default Setting: ON)

TOT

Function: Set the Time-Out Timer Time

Available Values: OFF/30/60/90/120/150/180/210/240 (sec)

Default Setting: 60 (sec)

The TOT feature provides a safety switch which limits transmission to a programmed value. This will promote battery conservation by not allowing you to make excessively long transmissions.

BCLO

Function: Enable/disable the (BCLO) Busy Channel Lock-out feature

Available Values: ON/OFF (Default Setting: OFF)

The BCLO feature prevents the radio's transmitter from being activated if a signal strong enough to break through the "Noise" squelch is present. On a frequency where stations using different CTCSS or DCS codes may be active, BCLO prevents you from disrupting their communications accidentally (because your radio may be muted by its own Tone Decoder).

Country: The Netherlands
Phone number: (+31)-20-500-52-70
Fax number: (+31)-20-500-52-78

certify and declare under our sole responsibility that the following equipment:

Type of Equipment: PMR 446 Transceiver
Brand Name: VERTEX STANDARD
Model Number: VX-146
Manufacturer: Vertex Standard Co., Ltd
Address of Manufacturer: 4-8-8 Nakameguro Meguro-ku, Tokyo 153-8644, Japan
EU / EFTA member states intended for use:

EU: Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland,
Italy, Luxembourg, The Netherlands, Portugal, Spain, Sweden,
United Kingdom

EFTA: Iceland, Liechtenstein, Switzerland

Member states with restrictive use:

Norway

is tested to and conforms to the essential requirements for protection of health and the safety of the user and any other person and ElectroMagnetic Compatibility, as included in following standards:

Applicable Standard: EMC Standard: ETS 300 279 (1997)
Safety Standard: EN 60065 (1998)
Radio Standard: ETS 300 296 (1994)

and therefore complies with the essential requirements and provisions of the Directive 1999/5/EC of the European Parliament and of the council of March 9, 1999 on Radio equipment and Telecommunication Terminal Equipment and the mutual recognition of their conformity and with the provisions of Annex IV (Conformity Assessment procedure referred to in article 10)

The following Notified Bodies have been consulted in the Conformity Assessment procedure:

Name of Notified Body: TNO Certificate B.V.
Address: PO Box 15, 9822 ZG Niekkerk, The Netherlands
Notified Body number: 0336

The technical documentation as required by the Conformity Assessment procedures is kept at the following address:

Company: Yaesu Europe B.V.
Address: 1118 ZN Schiphol, The Netherlands
