Instruction Manual

WX1□-AS (Voltage Input·Soft Variable Type)
WX3□-AS (mV Input·Soft Variable Type)
Adder/Subtractor

JUXTA

1. INSPECTION
This instrument has been thoroughly tested at the factory before shipment. When you receive it, visually inspect it for damage and check the accessories.

1.1 Model number and specification check
Check to see the model number and specifications on the nameplate attached to the front cover of the unit are as ordered.

1.2 Contents of the instruction manual
This instruction manual provides instructions on mounting, external wiring and maintenance.

2. GENERAL
This soft variable type unit receives 2 voltage or mV signals from transmitter and outputs isolated current or voltage signal after making addition and subtraction on 2 inputs.

Accessories:
Mounting block	2
Tag number and range label	1 each
Mounting screw M4	4

3. MOUNTING METHOD
JUXTA signal conditioners can be mounted on rack, wall or DIN rail.

3.1 Rack mounting
Use panel (FRK-16) and install it on an angle as shown in Fig.1. This is a convenient method for high density mounting of the unit on 19-inch rack panel. (See Fig. 6)

3.2 Wall mounting
Use panel (FRK-16) to mount the unit as shown in Fig. 2 or directly mount it on the wall (See Figs. 6 and 7 for mounting dimensions)

3.3 DIN rail mounting
Insert DIN rail into the upper of DIN rail groove on the rear of the unit and fix the rail with the slidelock at the lower of the unit as shown in Fig. 3.

3.4 Angle mounting
In case of single unit mounting, refer to Fig. 5 for its mounting.

3.5 Mounting block installation and removal
Insert mounting block into the groove of the unit as shown in Fig. 4 and slide it until it is locked with the stopper. To remove it, lift up the mounting block stopper with screwdriver (-) and slide it along the groove.

4. EXTERNAL WIRING
Open the terminal cover of the unit.
Wire should connect to M4 screw terminal.
Flexible twisted wires and durable round crimp-on terminals (JIS C2805) are recommended to be used.
● Signal cable having more than $0.5mm^2$ and power cable having more than $1.25mm^2$ of nominal cross-sectional area of conductor are recommended.

YOKOGAWA ◆

4.1 Wiring
① See Fig. 8 for terminal arrangement.
② Connect Ch1 input voltage signal cable to terminals 7(+), 8(-) and Ch2 input voltage cable to 3(+), 4(-) of the unit.
③ Connect output signal cable of the unit to its terminals 11(+) and 12(-).
④ In case of use AC power, connect AC power cable to terminals 14(L), 15(N), 16(G).
   In case of use DC power, connect DC power cable to terminals 14(+), 15(-).
   (See Fig. 9)

5. ITEMS TO BE CHECKED BEFORE TURNING THE POWER SWITCH ON
① Make sure that 24V DC power cable of the unit is connected to the correct polarities (+), (-).
② Confirm that the external wiring to the terminal board is correct.
③ Check that the mounting, ambient temperature, humidity, dust and vibration are normal.
Confirm the above items before turning the power on. The unit needs 5 minutes warmup to meet its specified accuracy level.

6. OPERATION CHECK
(Caution)
Carry out the following calibration after warming up the instruments for more than 5 minutes.
6.1 Calibration equipment
·Voltage/Current Generator
 (Yokogawa Model 7651 or equivalent)   1
·Voltmeter
 (Yokogawa Model 7551 or equivalent)   1
6.2 Check method
① Connect each equipment as shown in Fig.10.
② Input/output characteristic check
   Use Voltage/Current Generator and apply input signal equivalent 0, 25, 50, 75 and 100% of input span. Check that corresponding outputs are within specified accuracy rating range for the respective output reference values.
● If output signal is out of tolerance in case of ②, adjust it with Handy Terminal (JHT-100 or JHT200). For adjustment, refer Instruction Manuals of Handy Terminal.
   (JHT200 : IM JF81-02E, JHT-100 : IM JF81-01E)

7. SET VALUE INPUT THROUGH HANDY TERMINAL
Input range, gain and bias can be changed through Handy Terminal.
This unit makes addition/subtraction of 2 inputs under the following formula :

$$Y = K3\{K1(X1+A1)+K2(X2+A2)\}+A3$$

Whereas Y   : Output signal   (%)
        X1,X2 : Input signal   (%)
        K1~K3 : Gain   (No unit)
        A1~A3 : Bias   (%)
Set up Gain (K1~K3) through fixed constant (C11~C13) and Bias (A1~A3) through (C14~C16).
 K1~K3 = ±7.990 corresponds C11~C13 = ±7.990%
 A1~A3 = ±7.990 corresponds C14~C16 = ±7.990%
Decide gain and bais so as not to exceed ±800.0% during computation.
Input range is set by Zero, Span (B10, B11).
Set voltage corresponding 0% input on B10 and span voltage on B11.
