User's Manual

WX1 GateCONTROL

vigilantplant.

Foreword	This manual describes the functions and operating procedures of GateCONTROL. To
	ensure correct use, please read this manual thoroughly before beginning operation. After reading the manual, keep it in a convenient location for quick reference in the event a question arises.
	GateCONTROL is a software driver that uses the Modbus/RTU or Modbus/TCP protocol to acquire data from Yokogawa temperature controllers, signal conditioners, and other instruments, and then transfer that data to DAQLOGGER or Remote Monitor.
Note	 The contents of this manual are subject to change without prior notice as a result of
	 Without prior matrice of the matrice of algorithm of the software's performance and functions. Every effort has been made in the preparation of this manual to ensure the accuracy of its contents. However, should you have any questions or find any errors, please contact the dealer from whom you purchased the software. Copying or reproducing all or any part of the contents of this manual without the
	permission of Yokogawa Electric Corporation is strictly prohibited.Use of this software on more than one computer at the same time is prohibited. Use by more than one user is also prohibited.
	 Transfer or lending of this software to any third party is prohibited. Yokogawa Electric Corporation provides no guarantees other than for physical deficiencies found on the original disk or this manual upon opening the product package. License numbers will not be reissued. Please keep the license number in a safe
	place.
Copyrights	 Copyrights for the programs included on the CD-ROM are attributable to Yokogawa Electric Corporation.

Terms and Conditions of the Software License

NOTICE - PLEASE READ CAREFULLY BEFORE USE

Thank you very much for purchasing this medium containing a software program and related documentation provided by Yokogawa Electric Corporation (hereinafter called "Yokogawa"), and the program contained, embedded, inserted or used in the medium (hereinafter called the "Yokogawa Software Program").

By opening this package or plastic wrapping (hereinafter called "Package") enclosing the Yokogawa Software Program, you acknowledge that you understand and agree to the "Terms and Conditions of the Software License" (hereinafter called "Terms and Conditions") which is written in the documentation and separately attached. Accordingly, the Terms and Conditions bind you.

The Yokogawa Software Program and its related documentation including ownership of copyright shall remain the exclusive property of Yokogawa or those third parties from whom sublicensed software in the Yokogawa Software Program is licensed.

Yokogawa hereby grants you permission to use the Yokogawa Software Program on the conditions that you agree to the Terms and Conditions before you open the Package and/or install it in or onto a computer.

IF YOU DO NOT AGREE TO THE TERMS AND CONDITIONS, YOU CANNOT OPEN THE PACKAGE, AND MUST IMMEDIATELY RETURN IT TO YOKOGAWA OR ITS DESIGNATED PARTY.

Terms and Conditions of the Software License

Yokogawa Electric Corporation, a Japanese corporation (hereinafter called "Yokogawa"), grants permission to use this Yokogawa Software Program (hereinafter called the "Licensed Software") to the Licensee on the conditions that the Licensee agrees to the terms and conditions stipulated in Article 1 hereof.

You, as the Licensee (hereinafter called "Licensee"), shall agree to the following terms and conditions for the software license (hereinafter called the "Agreement") based on the use intended for the Licensed Software.

Please note that Yokogawa grants the Licensee permission to use the Licensed Software under the terms and conditions herein and in no event shall Yokogawa intend to sell or transfer the Licensed Software to the Licensee.

Licensed Software Name: GateCONTROL (Model WX1)

Number of License:

Article 1 (Scope Covered by these Terms and Conditions)

1.1The terms and conditions stipulated herein shall be applied to any Licensee who purchases the Licensed Software on the condition that the Licensee consents to agree to the terms and conditions stipulated herein.

1.2The "Licensed Software" herein shall mean and include all applicable programs and documentation, without limitation, all proprietary technology, algorithms, and knowhow such as a factor, invariant or process contained therein.

Article 2 (Grant of License)

- 2.1Yokogawa grants the Licensee, for the purpose of single use, non-exclusive and non-transferable license of the Licensed Software with the license fee separately agreed upon by both parties.
- 2.2The Licensee is, unless otherwise agreed in writing by Yokogawa, not entitled to copy, change, sell, distribute, transfer, or sublicense the Licensed Software.
- 2.3The Licensed Software shall not be copied in whole or in part except for keeping one (1) copy for back-up purposes. The Licensee shall secure or supervise the copy of the Licensee Software by the Licensee itself with great, strict, and due care.
- 2.4In no event shall the Licensee dump, reverse assemble, reverse compile, or reverse engineer the Licensed Software so that the Licensee may translate the Licensed Software into other programs or change it into a man-readable form from the source code of the Licensed Software. Unless otherwise separately agreed by Yokogawa, Yokogawa shall not provide the Licensee the source code for the Licensed Software.
- 2.5The Licensed Software and its related documentation shall be the proprietary property or trade secret of Yokogawa or a third party which grants Yokogawa the rights. In no event shall the Licensee be transferred, leased, sublicensed, or assigned any rights relating to the Licensed Software.
- 2.6Yokogawa may use or add copy protection in or onto the Licensed Software. In no event shall the Licensee remove or attempt to remove such copy protection.
- 2.7The Licensed Software may include a software program licensed for re-use by a third party (hereinafter called "Third Party Software", which may include any software program from affiliates of Yokogawa made or coded by themselves.) In the case that Yokogawa is granted permission to sublicense to third parties by any licensors (sub-licensor) of the Third Party Software pursuant to different terms and conditions than those stipulated in this Agreement, the Licensee shall observe such terms and conditions of which Yokogawa notifies the Licensee in writing separately.

2.8In no event shall the Licensee modify, remove or delete a copyright notice of Yokogawa and its licenser contained in the Licensed Software, including any copy thereof.

Article 3 (Restriction of Specific Use)

3.1The Licensed Software shall not be intended specifically to be designed, developed, constructed, manufactured, distributed or maintained for the purpose of the following events:

- a) Operation of any aviation, vessel, or support of those operations from the ground;,
- b) Operation of nuclear products and/or facilities;,
- c) Operation of nuclear weapons and/or chemical weapons and/or biological weapons; or
- d) Operation of medical instrumentation directly utilized for humankind or the human body.
- 3.2Even if the Licensee uses the Licensed Software for the purposes in the preceding Paragraph 3.1, Yokogawa has no liability to or responsibility for any demand or damage arising out of the use or operations of the Licensed Software, and the Licensee agrees, on its own responsibility, to solve and settle the claims and damages and to defend, indemnify or hold Yokogawa totally harmless, from or against any liabilities, losses, damages and expenses (including fees for recalling the Products and reasonable attorney's fees and court costs), or claims arising out of and related to the above-said claims and damages.

Article 4 (Warranty)

- 4.1The Licensee shall agree that the Licensed Software shall be provided to the Licensee on an "as is" basis when delivered. If defect(s), such as damage to the medium of the Licensed Software, attributable to Yokogawa is found, Yokogawa agrees to replace, free of charge, any Licensed Software on condition that the defective Licensed Software shall be returned to Yokogawa's specified authorized service facility within seven (7) days after opening the Package at the Licensee's expense. As the Licensed Software is provided to the Licensee on an "as is" basis when delivered, in no event shall Yokogawa warrant that any information on or in the Licensed Software, including without limitation, data on computer programs and program listings, be completely accurate, correct, reliable, or the most updated.
- 4.2Notwithstanding the preceding Paragraph 4.1, when third party software is included in the Licensed Software, the warranty period and terms and conditions that apply shall be those established by the provider of the third party software.

- 4.3When Yokogawa decides in its own judgement that it is necessary, Yokogawa may from time to time provide the Licensee with Revision upgrades and Version upgrades separately specified by Yokogawa (hereinafter called "Updates").
- 4.4Notwithstanding the preceding Paragraph 4.3, in no event shall Yokogawa provide Updates where the Licensee or any third party conducted renovation or improvement of the Licensed Software.
- 4.5THE FOREGOING WARRANTIES ARE EXCLUSIVE AND IN LIEU OF ALL OTHER WARRANTIES OF QUALITY AND PERFORMANCE, WRITTEN, ORAL, OR IMPLIED, AND ALL OTHER WARRANTIES INCLUDING ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE ARE HEREBY DISCLAIMED BY YOKOGAWA AND ALL THIRD PARTIES LICENSING THIRD PARTY SOFTWARE TO YOKOGAWA.
- 4.6Correction of nonconformity in the manner and for the period of time provided above shall be the Licensee's sole and exclusive remedy for any failure of Yokogawa to comply with its obligations and shall constitute fulfillment of all liabilities of Yokogawa and any third party licensing the Third Party Software to Yokogawa (including any liability for direct, indirect, special, incidental or consequential damages) whether in warranty, contract, tort (including negligence but excluding willful conduct or gross negligence by Yokogawa) or otherwise with respect to or arising out of the use of the Licensed Software.

Article 5 (Infringement)

- 5.1lf and when any third party should demand injunction, initiate a law suit, or demand compensation for damages against the Licensee under patent right (including utility model right, design patent, and trade mark), copy right, and any other rights relating to any of the Licensed Software, the Licensee shall notify Yokogawa in writing to that effect without delay.
- 5.2In the case of the preceding Paragraph 5.1, the Licensee shall assign to Yokogawa all of the rights to defend the Licensee and to negotiate with the claiming party. Furthermore, the Licensee shall provide Yokogawa with necessary information or any other assistance for Yokogawa's defense and negotiation. If and when such a claim should be attributable to Yokogawa, subject to the written notice to Yokogawa stated in the preceding Paragraph 5.1, Yokogawa shall defend the Licensee and negotiate with the claiming party at Yokogawa's cost and expense and be responsible for the final settlement or judgment granted to the claiming party in the preceding Paragraph 5.1.
- 5.3When any assertion or allegation of the infringement of the third party's rights defined in Paragraph 5.1 is made, or when at Yokogawa's judgment there is possibility of such assertion or allegation, Yokogawa will, at its own discretion, take any of the following countermeasures at Yokogawa's cost and expense.
 - a) To acquire the necessary right from a third party which has lawful ownership of the right so that the Licensee will be able to continue to use the Licensed Software;b) To replace the Licensed Software with an alternative one which avoids the infringement; or
 - c) To remodel the Licensed Software so that the Licensed Software can avoid the infringement of such third party's right.
- 5.4lf and when Yokogawa fails to take either of the countermeasures as set forth in the preceding subparagraphs of Paragraph 5.3, Yokogawa shall indemnify the Licensee only by paying back the price amount of the Licensed Software which Yokogawa has received from the Licensee. THE FOREGOING PARAGRAPHS STATE THE ENTIRE LIABILITY OF YOKOGAWA AND ANY THIRD PARTY LICENSING THIRD PARTY SOFTWARE TO YOKOGAWA WITH RESPECT TO INFRINGEMENT OF THE INTELLECTUAL PROPERTY RIGHTS INCLUDING BUT NOT LIMITED TO, PATENT AND COPYRIGHT.

Article 6 (Liabilities)

- 6.1If and when the Licensee should incur any damage relating to or arising out of the Licensed Software or service that Yokogawa has provided to the Licensee under the conditions herein due to a reason attributable to Yokogawa, Yokogawa shall take actions in accordance with this Agreement. However, in no event shall Yokogawa be liable or responsible for any special, incidental, consequential and/or indirect damage, whether in contract, warranty, tort, negligence, strict liability, or otherwise, including, without limitation, loss of operational profit or revenue, loss of use of the Licensed Software, or any associated products or equipment, cost of capital, loss or cost of interruption of the Licensee's business, substitute equipment, facilities or services, downtime costs, delays, and loss of business information, or claims of customers of Licensee or other third parties for such or other damages. Even if Yokogawa is liable or responsible for the damages attributable to Yokogawa and to the extent of this Article 6, Yokogawa's liability for the Licensee's damage shall not exceed the price amount of the Licensee Software or service fee which Yokogawa has received. Please note that Yokogawa shall be released or discharged from part or all of the liability under this Agreement if the Licensee modifies, remodels, combines with other software or products, or causes any deviation from the basic specifications or functional specifications, without Yokogawa's prior written consent.
- 6.2All causes of action against Yokogawa arising out of or relating to this Agreement or the performance or breach hereof shall expire unless Yokogawa is notified of the claim within one (1) year of its occurrence.
- 6.3In no event, regardless of cause, shall Yokogawa assume responsibility for or be liable for penalties or penalty clauses in any contracts between the Licensee and its customers.

Article 7 (Limit of Export)

Unless otherwise agreed by Yokogawa, the Licensee shall not directly or indirectly export or transfer the Licensed Software to any countries other than those where Yokogawa permits export in advance.

Article 8 (Term)

This Agreement shall become effective on the date when the Licensee receives the Licensed Software and continues in effect unless or until terminated as provided herein, or the Licensee ceases using the Licensed Software by itself or with Yokogawa's thirty (30) days prior written notice to the Licensee.

Article 9 (Injunction for Use)

During the term of this Agreement, Yokogawa may, at its own discretion, demand injunction against the Licensee in case that Yokogawa deems that the Licensed Software is used improperly or under severer environments other than those where Yokogawa has first approved, or any other condition which Yokogawa may not permit.

Article 10 (Termination)

Yokogawa, at its sole discretion, may terminate this Agreement without any notice or reminder to the Licensee if the Licensee violates or fails to perform this Agreement. However, Articles 5, 6, and 11 shall survive even after the termination.

Article 11 (Jurisdiction)

Any dispute, controversies, or differences between the parties hereto as to interpretation or execution of this Agreement shall be resolved amicably through negotiation between the parties upon the basis of mutual trust. Should the parties fail to agree within ninety (90) days after notice from one of the parties to the other, both parties hereby irrevocably submit to the exclusive jurisdiction of the Tokyo District Court (main office) in Japan for settlement of the dispute.

Article 12 (Governing Law)

This Agreement shall be governed by and construed in accordance with the laws of Japan. The Licensee expressly agrees to waive absolutely and irrevocably and to the fullest extent permissible under applicable law any rights against the laws of Japan which it may have pursuant to the Licensee's local law.

Article 13 (Severability)

In the event that any provision hereof is declared or found to be illegal by any court or tribunal of competent jurisdiction, such provision shall be null and void with respect to the jurisdiction of that court or tribunal and all the remaining provisions hereof shall remain in full force and effect.

Overview of This Manual

Structure of The Manual

Chapter	Title	Description
1	Overview	Gives an overview of the GateCONTROL software. Lists the PC requirements for running GateCONTROL and gives information about system configuration.
2	Operating	Gives procedures for entering environment and data acquisition. Procedures interval settings, and how to monitor the operational status of the software.
3	Functions	Provides a detailed description of the functions of GateCONTROL. Lists error messages, their causes, and their corrective actions.
Index		An alphabetical index of the manual's contents.

Scope of the Manual

This manual provides instructions on how perform basic operations with the software when running under Windows XP, Windows 2000, and Windows Vista. For information regarding the basic operations of Windows, see the Windows user's manual.

Conventions Used in This Manual

U	n	its	

K Denotes 1024. Example: 10 KB M Denotes 1024K. Example: 10 MB

Boldface Type

Hardware and software controls that the user manipulates such as dialog boxes, buttons, and menu commands are often set in boldface type.

Subheadings

On pages in chapters 1 through 3 that describe operating procedures, the following subheadings are used to distinguish the procedure from their explanations.

Procedure	This subsection contains the operating procedure used to carry out the function described in the current section. All procedures are written with inexperienced users in mind; experienced users may not need to carry out all the steps.
Note	Calls attention to information that is important for proper operation

of the instrument.

1.1 Overview of GateCONTROL Functions

GateCONTROL is a software driver that acquires data from temperature controllers and signal conditioners that support data input/output via the Modbus/RTU and Modbus/ TCP protocols, and in addition to transferring the data to Yokogawa's DAQLOGGER or Remote Monitor software, can write output requests from AddObserver to temperature controllers. Using GateCONTROL allows you to easily monitor data on DAQLOGGER or Remote Monitor that is input for measurement on temperature controllers and signal conditioners. Also, it is now possible to operate a controller from AddObserver through GateCONTROL.

DAQLOGGER is application software for the PC that enables communication between the PC and various types of recorders as well as monitoring of data logged by those recorders. A direct connection can be made for communications between DAQLOGGER and the μ R1000/ μ R1800, VR, DARWIN, DX, MV, and CX recorders by Yokogawa. Remote Monitor is application software that enables monitoring of data logged by recorders or data logging software.

AddObserver is a software program that allows the user to create original screens for displaying measured data, and for operating instruments.

Features

- Up to thirty-two temperature controllers and signal conditioners can be connected.
- The main registers of each instrument are automatically assigned as tag information using the Automatic Model Determination function.
- · Arbitrary registers can be registered as tags.

1

1.2 System Overview

System

This software can open communication with Yokogawa temperature controllers and signal conditioners, perform data acquisition, and write the data.

The supported temperature controllers and signal conditioners are the ones below that support the Modbus/RTU or Modbus/TCP protocol. The product may not support GateCONTROL depending on its firmware revision number. For information on how to check the firmware revision number of your MODBUS instrument, and whether or not a connection with GateCONTROL can be made, please contact the dealer from which you purchased the instrument.

Temperature controllers	UT130, UT150, UT152, UT155, UP150
Digital indicating controllers	UT320, UT321, UT350, UT351, UT420, UT450, UT520,
	UT550, UT551, UT750, US1000
Program controllers	UP350, UP351, UP550, UP750
Digital indicators with alarms	UM330, UM331, UM350, UM351
Signal conditioners and conditioners	VJA7, VJH7, VJP8, VJQ7, VJQ8, VJS7, VJU7, VJX7
Digital alarm configurators	MVHK, MVRK, MVTK

Supported Operating Systems

Run DAQWORX under any of the following operating systems.

- · Windows 2000 Professional SP4
- Windows XP Home Edition SP2
- Windows XP Professional SP2 (excluding Windows XP Professional x64 Edition)
- Windows Vista Home Premium (excluding the 64-bit edition)
- Windows Vista Business (excluding the 64-bit edition)

The language displayed by the software under different language versions of the OS are as follows.

OS Language	Software Language
Japanese	Japanese
Other	English

Hardware Requirements

The following hardware and software are required to use GateCONTROL.

• PC:

- A PC that runs one of the OS above, and that meets the following CPU and memory requirements. When Using Windows 2000 or Windows XP Pentium 4, 1.6 GHz or faster 512 MB or more of memory When Using Windows Vista Pentium 4, 3 GHz or faster 2GB or more of memory · Free disk space: 200 MB or more · Communication interface: An Ethernet (when connecting to DAQLOGGER or Remote
- Monitor) or RS-232 port that is recognized by the operating system. CD-ROM drive: Used to install the software.
- A mouse supported by the operating system. Peripheral devices:
- Monitor: When Using Windows 2000 or Windows XP

A monitor supported by the OS of 1024 × 768 dpi or higher and 65,536 colors or more.

When Using Windows Vista

A video card recommended for use with Vista and a monitor supported by the OS of 1024 × 768 dpi or higher and 65,536 colors or more.

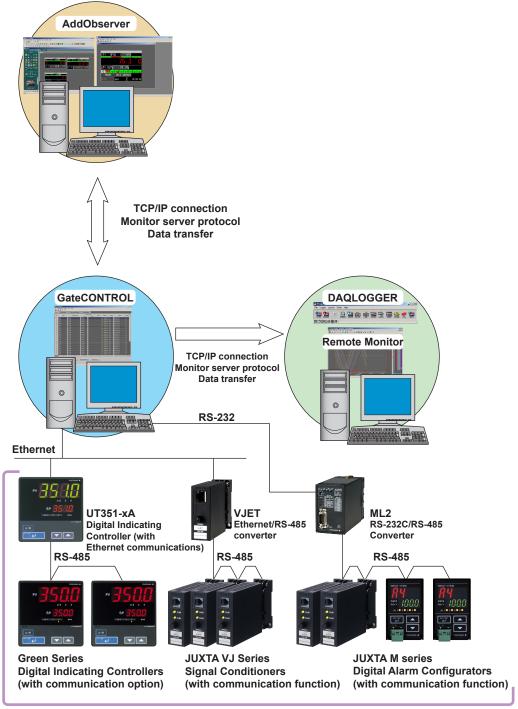

Note.

An RS-232 to RS-485 converter is required to perform communications between the software and another Modbus/RTU (RS-485) device (Yokogawa ML2 RS232C/RS485 converter recommended).

1

Overview

System Configuration

Up to 32 units

2.1 Running and Exiting GateCONTROL

Running the Software

Procedure

1. From the Windows Start menu, choose Programs > YOKOGAWA DAQWORX > GateCONTROL > GateCONTROL.

GateCONTROL starts.

No.			Monitor/Status							
	Model	Controller Mode	Control O	utput	Option	Tag Info.	Comm	,	Address	Status
			Loop 1	Loop 2	option	ray inc.			1100000	Clarao
	Not Connected						NONE	•

	Not Connected						NONE			
	Not Connected		-				NONE	-		
	Not Connected						NONE	.		
20	Not Connected						NONE			
			:	1	1					_

Note _

- When you start GateCONTROL it is restored to the same status that was active during the previous session.
- If the program is closed while a process or service is running, the license will be considered to be "in use." If the message, "Invalid license number. Please reinstall." appears when restarting the program, it may indicate that the user is attempting to run a Gate program in excess of the number of available licenses.

Exiting the Software Procedure

 Choose File > Exit from the menu bar, or click the X button at the right end of the title bar.

GateCONTROL closes.

2.2 Entering Environment Settings

This software includes an automatic model determination function, enabling automatic acquisition of the connected devices' (temperature controllers and signal conditioners) model names, tag information, and Modbus address when you enter the appropriate serial port settings, IP addresses, and/or port numbers.

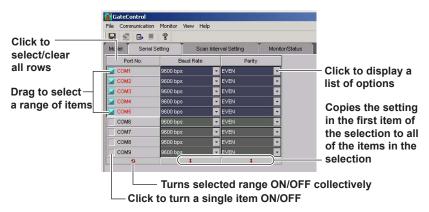

The following environment settings are entered.

- Serial port settings (when the communication mode is COM)
- Settings for the connected devices
- Data acquisition condition
- TCP/IP port settings for the monitor server
- Tag settings (enter the tag name and decimal place as needed)

Serial Port Settings (When the Communication Mode is COM)

Procedure

 Click the Serial Setting tab or choose View > Serial Setting from the menu bar. The Serial Setting page in displayed.

2. Turn ON the port numbers to be used, and set the baud rate, and parity.

Port number:	ON (blue)/OFF (gray)
Baud rate:	4800, 9600
Parity:	NONE, ODD, EVEN

Settings for the Connected Devices

Register all devices that you will operate and from which you will acquire data.

Procedure

 Click the Model tab or choose View > Model from the menu bar. The Model Setting tab is displayed.

When Ether communication is selected, clicking here displays a dialog box for setting the IP address, port number, and Modbus address. If COM1-COM9 is selected, a dialog box for setting the Modbus address appears.

Click to display a list box for selecting a communication port Only enabled COM ports (specified in serial port settings) are displayed

2. Select the port to be used from the Communication Method list box.

If using an Ethernet port:	Ether
If using a COM port:	COM1–COM9

IP Address and Port Number (If Ethernet Is Selected for the Port)

3. Click an address. The Address Setting dialog box opens.

Input Address - Model04	×
Ether IP Address or Host Name	
localhost	
Port No. 502	
Modbus	
Modbus Address Unknown	•
ОК	Cancel

4. Enter the IP address (or host name) and port number.

Enter the IP address or host name set on the device to which you wish to connect.

Port no.: 502 Modbus address: 1–9

IP address:

(If you will perform automatic model determination, including for the Modbus address, select Unknown.)

Note -

The default port number for Modbus/TCP is 502. If no particular specification has been made on the device, use this number.

Modbus Address (for Ports Set to COM)

3. Click an address. The Address Selection dialog box opens.

4. Enter the Modbus address.

Modbus address: 1-99

If you will perform automatic model determination including for the Modbus address, choose Unknown.

Automatic Model Determination

5. After specifying the communication methods and addresses, drag numbers to specify the range for automatic model determination.

2. Set the acquisition interval, timeout time, and number of retries.

Acquisition interval:	0.5–60 s (or 500–60000 ms: initial value is 5000 ms)
Timeout time:	1–10 sec (or 1000–10000 ms: initial value is 1000 ms)
Retry ON/OFF:	Select whether or not to retry communications (ON/OFF).
Retry interval:	The interval between communication retries (30–3600 sec.)

Note _

- Retries are performed every scan interval at the specified retry interval until communication is restored. Retries are also performed on instruments with which a communication error occurred during the first communication. At the point that communication is restored, alarm values and other information are retrieved from the connected temperature controllers or signal conditioners and data is acquired.
- If Retry is turned OFF, you can retry the connection manually by clicking the Retry Connection button on the Monitor/Status tab.

TCP/IP Settings for the Monitor Server Port

The port number need not be changed unless desired.

Procedure

1. Choose File > Port No. from the menu bar.

The Port No. for the internal communication dialog box opens.

2. Enter the port number used to transfer data loaded from a connected device to DAQLOGGER, Remote Monitor or AddObserver.

2.2 Entering Environment Settings

Tag Settings Procedure

1. Click the Detail Settings in the tag information column of the model you wish to set in the Model Settings page.

The tag settings include an input tab page and an output tab page.

Maximum number of input tags: 48

Maximum number of output tags: 32

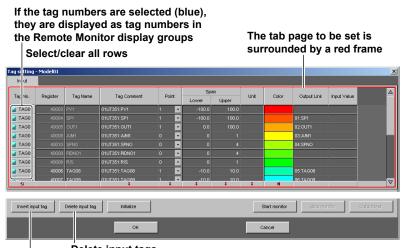

The active page is surrounded by a red frame. You can click anywhere on an input/output tab page to move the red frame.

The list of registered tags is determined by the model, control mode, control output, and option functions. Default tag list items displayed in gray cannot be changed. Also, the default tag list cannot be deleted.

2. If you performed automatic model determination, the tag information acquired from the connected devices is displayed.

If links are set, the edited contents are reflected on the linked channels.

Editing the Input Tag Page

Delete input tags Create input tags

Tag No.: Register number:	Select to use (blue) or not use (gray) the selected tag numbers. Shows the reference location of each register. Setting range: 40001 to 49999
	When Same on the Output tab page is ON (blue), the edited results are reflected on the output tab page. Register numbers cannot be duplicated (duplicate register numbers are allowed for the default
Tag name:	tags because the bit position of the referenced value is different). Specify using eight alphanumeric characters or fewer. In the Remote Monitor, this is displayed as a channel name.
	Tag names cannot be duplicated. Also, tags to which reserved tag names have been added cannot be used.
Tag comment:	Specify using sixteen alphanumeric characters or fewer. In the Remote Monitor, this is displayed as a tag comment.
Decimal point:	Set the decimal place to offset the register value. Select 0, 1, 2, 3, 4, or 5. The initial values vary depending on the type of tag. If automatic model determination is performed, the decimal point of the connected device is displayed.
Span minimum/ma	
opuli illininationi	Setting range: –1E16 to 1E16
	The initial values vary depending on the type of tag. If automatic model determination is performed, the setting value of the connected device is displayed.
Units:	On the client side this is handled as the minimum/maximum of scale. Specify using six alphanumeric characters or fewer. The initial values vary depending on the type of tag. If automatic model determination is performed, the units set on the connected device are displayed.
Color:	Click the colored part to open the Color Settings dialog box. An arbitrary color can be entered.
Output link:	Displayed in the format xx:tag name where xx is the output tag number. Displays the tag for output that is linked to the input tag. This cannot be changed.

2.2 Entering Environment Settings

Loaded value: Displays the tag name value loaded from the connected device when the monitor is executed. "Error" is displayed if a communication error occurs.

Note.

The tag number use/do not use settings are those of the ON/OFF display conditions of the Remote Monitor.

The color setting is the display color of the Remote Monitor.

Editing the Output Tab Page

	The tab page to be set is surrounded by a red frame

Create output	tags
Tag No.:	Used as Tag No. in AddObserver
Registers:	Same:When selected (ON), the output register number is applied
	to the input register number.
	No.:Shows the location of the tag write register. However, since in the
	case of SP there are multiple registers to be written, a register numbe
	is not displayed. Register numbers cannot be duplicated.
Tag name:	Specify using eight alphanumeric characters.
	Used as Channel Name in AddObserver.
	Tag names cannot be duplicated. Also, tags to which reserved tag
_	names have been added cannot be used.
Tag comment:	Specify using sixteen alphanumeric characters or fewer.
	In AddObserver, this is displayed as a tag comment.
Decimal point:	Set the offsetting decimal place for writing to registers. Select 0, 1, 2, 3,
	or 5.
Span minimum/	
	Setting range: –1E9 to 1E9
	If the value requested by AddObserver is outside of the span range, it
	In the value requested by AddObserver is outside of the span range, it

Note.

Units:

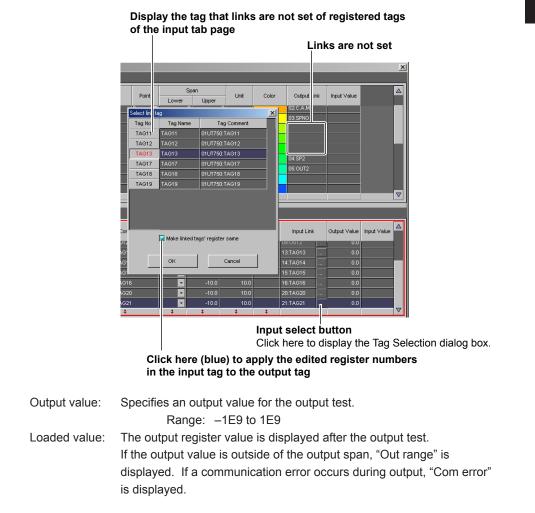

not output.

Registers 41280 (UTM, USM, UPM) and 41281 (SMP) of the UT520, UT550, UT551, UT750, US1000, UP550, and UP750 cannot be written using the Modbus/RTU, Modbus/TCP protocol. Please make note of this.

Specify using six alphanumeric characters or fewer.

2 Operating

Input link: Displays and selects the tag for intput that is linked to the output tag. Displayed in the format xx:tag name where xx is the input tag name. When you click an input select button, the tag selection dialog box is displayed.

Tag Setting Execution Button

Insert input tags, insert output tags:

Insert a tag in the last line of the tag numbers.

Cannot be performed during testing.

Delete input tags, delete output tags:

Deletes the selected tag. If a tag is deleted, the tag numbers are refreshed.

With deletion of input tags, the linked output tags are also deleted.

With deletion of output tags, the linked input tags are not deleted but the link is cleared.

Default tags cannot be deleted.

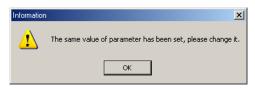

Cannot be performed during testing.

Initialization: Added tags are all deleted, and the tag list returns to the default condition.

OK: The settings in the tag settings dialog box are saved, and the dialog box closes.

When testing, the settings are saved after the test is completed, and the dialog box closes.

If register or tag names are duplicated, the dialog box below is displayed.

Duplicate register numbers and tag names are displayed in yellow.

The current settings are saved.

Restoring Environment Settings

This procedure clears all settings currently being entered and restores the most recently saved settings.

Procedure

1. Choose File > Revert from the menu bar.

2.4 Starting/Stopping Data Acquisition

When you start data acquisition using this software, data from connected devices (temperature controllers and signal conditioners) is loaded, transferred to DAQLOGGER or Remote Monitor, and output requests from AddObserver are written to connected devices.

Note .

The maximum number of DAQLOGGERs, Remote Monitors, or AddObservers that can be connected at once is sixteen.

Starting Data Acquisition

Procedure

1. Enter environment settings. (See section 2.2, "Entering Environment Settings.")

Running from the Toolbar/Menu Bar

2. Click the Start button or choose Monitor > Start from the menu bar.

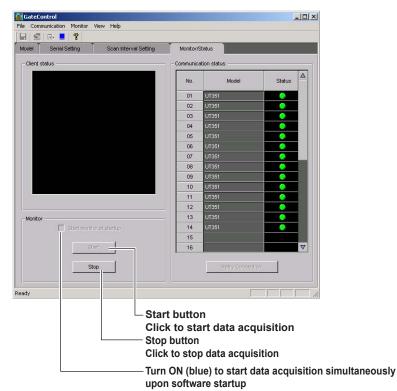

The status of communication with the device is displayed in the **Monitor/Status** tab under Communication status. Under Client status, the name of the connected client, connection status, and the address of any disconnected DAQLOGGERs, Remote Monitors, and AddObserver is displayed.

Starting (Executing) from the Monitor/Status Tab

2. Click the Start button on the Monitor/Status tab.

The name of connected clients and their communication statuses are displayed.

Maximum number of display of clients communication statuses is 48.

Starting the Software and Data Acquisition at the Same Time

3. When you turn ON "Start monitor at startup" in the **Monitor/Status** tab, data acquisition starts at the same time that the software is started.

Stop data acquisition

Stopping Acquisition from the Toolbar/Menu Bar

 Click the Stop button or choose Monitor > Stop from the menu bar. Nothing is displayed for the communication of connected devices.

- Data acquisition Stop button

Stopping Acquisition from the Monitor/Status Tab

1. Click the Stop button on the Monitor/Status tab.

Nothing is displayed for the communication of connected devices.

2.5 Performing Communication Tests of Connected Devices

Before starting data acquisition, you can perform a loop back test, read test, and write test between connected devices.

Performing the Loop Back Test

Using the loop back test you can check the specified communication method and connection status with the device at the specified address.

Note _

The loop back test can not be performed during data acquisition.

Procedure

 Click the Model tab or choose View > Model from the menu bar. The Model tab is displayed.

Result appears

- 2. Drag to select the numbers on which you wish to perform the loop back test.
- **3.** Click the Loop Back Test button.
 - The result appears in the status column.

OK: Normal

Not OK: No response

Note .

- If the result is Not OK, check whether the communication settings of the software and target device match.
- If the loop back test will be performed on multiple devices, individual tests are performed even if a communication error occurs part way through.

Performing Read and Write Tests

You can check the data of the registers specified in the input tab page (monitor execution) by performing a read test.

Also, you can perform a write test to the registers specified in the output tab page during monitor execution.

2.5 Performing Communication Tests of Connected Devices

Note.

The Read and Write tests cannot be performed during data acquisition.

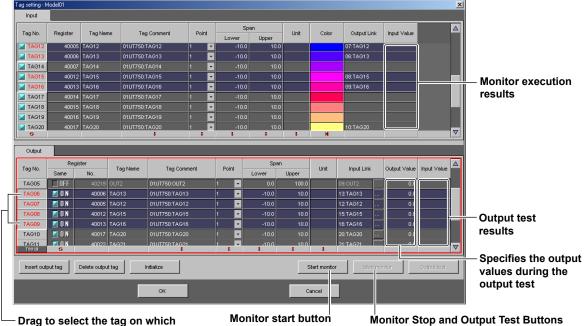

Procedure

Performing a Read Test

 Click the Detail Settings button in the Model Settings tab page of the model on whicih you wish to perform the read test.

The Tag Setting dialog box opens.

🕌 Gate	CONTROL										_

Click to display the Tag Settings dialog box

 Drag to select the tag on whicl to perform the output test

2. Click the Start monitor button.

The value of each tag from the instrument is loaded, and displayed in the loaded value column of the input tab sheet.

To quit monitor execution, proceed to step 6.

Performing a Write Test

- **3.** Specify the **Output Values** of the tags on which you wish to perform the **output test** in the output tab page.
- 4. Select the tags on which to perform the output test
- 5. Click the Output Test button.

The output values are written to registers, then the values are acquired from the write registers and the loaded results are displayed in the loaded value column in the output tab page.

Stopping the Read Test

6. Click the Stop monitor button.

The Read Test is concluded.

2.6 Checking the Client Connection Status and Communication Status of Connected Instruments, and Reconnecting Connected Instruments

Checking the Client Connection Status and Communication Status of Connected Instruments

Procedure

Checking the Connection Status

 Click the Monitor/Status tab or choose View > Monitor/Status from the menu bar. The Monitor/Status tab is displayed.

Communication Monitor View Help 🗐 🗐 💿 💻 💡 Scan Interval Setting Monitor/Status Status No Indicator for the communication 01 02 status with the connected device 03 Green: Normal (comm. open) 04 **Red: Communication error** 05 06 07 Yellow: Data dropout occured UT351 and communciation is retried 08 (communication paused) 09 10 No display: Communication error 11 (comm. paused) 12 Double-click to display the Error 13 Mon Indicator dialog box 14 15 16 Stop

The client connection status and communication status of connected devices is displayed.

Displays the names of connected clients

Note -

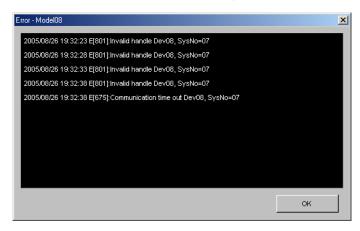

- If the communication status of a connected device is red, check whether a model, control mode, control output, or option in the Model Setting tab have the same settings as the connected device, and whether the communication method is correct.
- Data acquisition cannot be performed when the status is red.

Viewing Error Detail

2. Double-click the status indicator under Communication Status. The Error Indicator dialog box opens.

Up to 100 of the most recent errors are displayed for each connection.

Errors are displayed in the order date/time of occurrence, error number, error contents, affected number, and affected system number.

See section 3.4 for error messages.

Note -

If a connected instrument experiences an error during communications, attempts are made to restore communications at the specified retry interval. If communication cannot be restored, the status indicator turns red. Retries are performed until communication is restored. To start communication manually, click the Retry Connection button.

Reconnecting Connected Instruments

- 1. Select the instrument to reconnect.
- 2. Click the Retry Connection button.

Communication with the selected device is reopened.

2.7 Viewing Version Information

Procedure

 Click the About button or choose Help > About from the menu bar. The Version dialog box opens.

Version	
	GateCONTROL Version OK Copyright (C) 2005-2007 YOKOGAWA Electric Corporation Software Japan This Product is licensed to: Company name User name License number

3.1 Modbus Communication Device Settings

The default tag list in the Tag Settings dialog box that is displayed when you click the detail settings in the Model Settings tab determines the model, control mode, control output, and option function contents of the Model Settings tab.

The following describes the meanings of each tag that may appear in the Tag Settings dialog box.

Also, the tag names listed here are reserved. Arbitrarily added tags cannot be used. therefore the same serial and model settings as the connected device must be set on GateCONTROL.

• Serial Port Settings (as Needed)

Port number Baud rate

- Parity
- Settings for the Connected Devices (Temperature Controllers and Signal conditioners)

Serial Communications

- Communication protocol
- Baud rate
- Parity
- Stop bit
- · Data length

Communication Address

Ethernet Communications

- IP address
- Subnet mask
- · Default gateway

Enter communication parameters on devices connected to GateCONTROL in advance. For instructions, see the user's manual of the connected device.

Note _

The PC is connected to the instrument via an RS-232C/RS-485 converter. The connection can be made using a 4-wire or 2-method. When using the 2-wire method, disable echo back on the Converter.

Settings for Connected Modbus Devices

Enter settings on the connected devices as follows.

Setting	Green Series	UT1000 Series	US100	VJ Series	M Series
Baud rate	4800 or 9600				
Parity	ODD, EVEN, or NONE				
Stop bit	1	1	1	1	1
Data length	8	8	8	8	8
Communication protocol	8	4	1	MODBUS, RTU mode	4

3.2 Meanings of Tags of Connected Devices

The default tag list in the Tag Settings dialog box that is displayed when you click the detail settings in the Model Settings tab determines the model, control mode, control output, and option function contents of the Model Settings tab.

The following describes the meanings of each tag that may appear in the Tag Settings dialog box.

Also, the tag names listed here are reserved. Arbitrarily added tags cannot be used.

Tag Name	Meaning
PV1	Measurement input value on loop 1, or the measurement input value. The error
	status and alarm status of PV1 or the measurement input value is added.
	(See section 3.3 for information on handling error and alarm statuses.)
PV2	Measurement input value on loop 2. The error status and alarm status of PV2 is added.
SP1	Target setting value used on loop 1. SP1 related alarm statuses are added.
SP2	Target setting value used on loop 2. SP2 related alarm statuses are added.
OUT1	Control output value on loop 1. Control output value on loop 1. OUT1 related alarm statuses are added.
OUT2	Control output value on loop 2. Control output value on loop 2. OUT2 related alarm statuses are added.
HOUT1	For heating/cooling control on loop 1, or the control output value for heating. HOUT1 related alarm statuses are added.
HOUT2	For heating/cooling control on loop 2, or the control output value for heating. HOUT2 related alarm statuses are added.
COUT1	For heating/cooling control on loop 1, or the control output value for cooling. COUT1 related alarm statuses are added.
COUT2	For heating/cooling control on loop 2, or the control output value for cooling. COUT2 related alarm statuses are added.
A/M1	Auto/manual mode for loop 1
	0: AUTO (automatic) mode, 1: MAN (manual) mode
A/M2	Auto/manual mode for loop 2
	0: AUTO (automatic) mode, 1: MAN (manual) mode
C.A.M	Switch between manual/automatic/cascade
	0: AUTO (automatic) mode, 1: MAN (manual) mode, 2: CAS (cascade) mode
R/L1	Remote/local mode on loop 1.
	0: Local, 1: Remote
R/L2	Remote/local mode on loop 2.
	0: Local, 1: Remote
SPNO	Target setting value number currently used
PIDNO1	PID number used on loop 1
PIDNO2	PID number used on loop 2
R/S	Running/Stopped status
	0: Running, 1: Stopped
R/P/L	Program run reset/program mode
	0: Program operation reset, 1: Program operation, 2: Local operation
R/P1/P2	Program run reset/program mode
	1: Program operation reset, 2: Program 1 operation, 3: Program 2 operation
HOLD	Program operation pause mode
	0: Program operation, 1: Program operation pause
PVEx	PV event status. x is the event number
	0: Event OFF, 1: Event ON
TMEx	Time event status. x is the event number
	0: Event OFF, 1: Event ON
PTNO	Number of currently operating program pattern

Tag name	Meaning
SEGNO	Number of currently operating segment
TIME	Remaining time of currently operating segment, or time elapsed during WAIT
	The units are seconds.
LSP/CAS	Local/Cascade mode
	0: CAS (cascade) mode, 1: LSP (local) mode
C.A.M1	Cascade/auto/manual mode for loop 1
	0: AUTO (automatic) mode, 1: MAN (manual) mode, 2: CAS (cascade) mode
C.A.M2	Cascade/auto/manual mode for loop 2
	0: AUTO (automatic) mode, 1: MAN (manual) mode, 2: CAS (cascade) mode
O/C	CLOSE/OPEN mode
	0: CLOSE mode, 1: OPEN mode
INPUT	Input value. The error status and alarm status are added.
	(See specific items for information on handling error and alarm statuses.)
ADVANCE	Segment forced transition
	0: End of forced transition or not executed, 1: Segment forced transition
RUN	Program run/stop status
	0: Stopped, 1: Running

3.3 Details on Functions

Time Out Operation

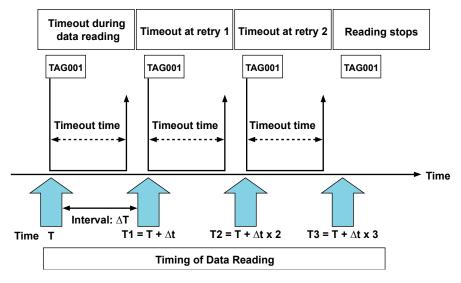

When reading tag data, after sending a register value request message to the Modbus device, if the message is not received within the specified time out time that tag is considered to have timed out.

For tags which have timed out, the specified number of retries are performed starting with the next scan interval. If there is no response from the Modbus devices corresponding to the tags during the specified number of retries, data reading for that tag is not performed thereafter. If a response is received from a Modbus device during one of the retries, the retry count is reset (the retry count will be 1 on the next time out).

If the retry count is 0, a retry is not performed on the tag on which a timeout occurred, and data reading is not performed for that tag thereafter.

The figure below shows what happens if, at retry count 2, data acquisition does not recover during retry.

To reopen communications after loading stops, choose the target device for communication in the Acquisition/Status tab, then click the Reconnect button.

Note

Using GateCONTROL, data can be acquired concurrently on each COM port. Therefore data is logged more efficiently when connecting each device to a separate port rather than connecting several devices to a single port.

Error Status

The following shows the error statuses supported by each model. Also, the statuses are modified as shown before transfer to DAQLOGGER and Remote Monitor.

Green Series, UT100 Series, US1000

Device Data Status	Data Display after Change
PV1 A/D converter error	ILLEGAL
PV1 RJC error	ILLEGAL
PV1 overscale	+OVER
PV1 underscale	-OVER
PV2 A/D converter error	ILLEGAL
PV2 RJC error	ILLEGAL
PV2 overscale	+OVER
PV2 underscale	-OVER

VJ Series

Device Data Status	Data Display after Change
EEP error	ILLEGAL
EEP sum error	ILLEGAL
Low cut status	-OVER
A/D burnout	ILLEGAL
RJC error	ILLEGAL

M Series

Data Display after Change
-OVER
+OVER
-OVER
ILLEGAL
ILLEGAL
ILLEGAL
ILLEGAL

Processing Alarm Statuses

Each model's alarm types are changed as follows before being sent to DAQLOGGER and Remote Monitor.

and Rem	ote Monitor.		
Alarm Type on Device Side	Alarm Type after Change		
	PV	SP	OUT, HOUT, COUT
Measured value high limit	Measured value high limit [H]	_	<u> </u>
Measured value low limit	Measured value low limit [L]	_	_
Deviation high limit	Deviation high limit [DH]	_	_
Deviation how limit	Deviation low limit [DL]	_	
De-energized on deviation high limit	Deviation high limit [DH]	_	_
alarm			
De-energized on deviation low limit	Deviation low limit [DL]	_	_
alarm

Deviation low limit with stand-by actions for setpoint	Other [ETC]	Deviation low limit [DL]	_
De-energized on deviation high limit alarm with stand-by actions for target setpoint	Other [ETC]	Deviation high limit [DH]	_
De-energized on deviation low limit alarm with stand-by actions for target setpoint	Other [ETC]	Deviation low limit [DL]	_
Deviation high or low limit with stand- by actions for setpoint	Other [ETC]	Other [ETC]	_
Deviation within high and low limits with stand-by actions for target setpoint	Other [ETC]	Other [ETC]	_

Displayed in brackets ([]) on DAQLOGGER and Remote Monitor.

Furthermore, for the VJ series, all alarm types are Other [ETC].

Alarm types are loaded from each connected device upon start of acquisition by GateCONTROL. Even if alarm types are changed on the connected device after acquisition starts, the alarm types valid upon start of acquisition are used.

Output Processing

Function

- The output request from the client is stored in the output request storage buffer.
- The output request storage buffer is checked for an output execution every second, and output is executed on the instrument if an output request is found. Then, the output request storage buffer is cleared.
- Output request storage buffer is set to hold the most recent value, so if multiple writings to the same tag occur during the confirmation interval, the written value becomes the most recent one.
- An instrument is either outputting or acquiring, and acquisition execution is put on hold until output execution is finished, and vice versa. Therefore, acquisition or output execution may be delayed.

Also, time may be required for output execution. If so, it can occur more slowly than the one-second confirmation interval.

Writing of the SP Value

During output execution, SPNO is acquired from the instrument. SP value output is executed on the register corresponding to this SPNO.

3.4 Notes When Performing Communications with Software on Other PCs

Communications with DAQLOGGER

- When performing communications with DAQLOGGER, set the IP address of the device with which DAQLOGGER will connect on the address of the PC that GateCONTROL is operating, then execute automatic model determination.
- On DAQLOGGER, all devices connected to GateCONTROL (temperature controllers and signal conditioners) are considered a single system. Therefore, the following should be noted.
 - DAQLOGGER's automatic model determination determines only the lowestnumbered device if multiple devices are connected to GateCONTROL (temperature controllers and signal conditioners). For determination of the other devices, specify the port number and system number (a number that is 1 less than the number in the GateCONTROL's Model Settings tab) in the DAQLOGGER settings, then execute the automatic model determination function.
 - When connecting all devices connected to GateCONTROL to DAQLOGGER as one system, specify "No system number" in the address setting screen, then execute automatic model determination.

Communications with DAQLOGGER Client Package

Check the port number (initial value is 50299) and system number set in GateCONTROL, then reconnect. The logic behind the system numbers is the same as that for DAQLOGGER.

GateCONTROL Settings

Set the same serial and model settings as the connected device on GateCONTROL.

3.5 Error Messages and Corrective Actions

A message (such as an error message) may appear during operation. The following describes the meanings of the messages and their corrective actions.

Error

Code	Description	Corrective Action
E211	Cannot write to the file.	Confirm that the disc capacity and file system are correct.
E212	Cannot read file.	Confirm that a file exists, that the software supports it, and whether the file system is correct.
E213	Cannot open the file.	Confirm that a file exists, that the software supports it, and whether the file system is correct.
E501	Invalid license number. Please reinstall.	With the Gate series, the number of licenses purchased is the limit for the number of programs run at the same time. Reinstall the software.
E1010	Execution failed.	Confirm that the file is not corrupt. If this error appears repeatedly, reinstall the software.

Message

Code	Description
M1210	Save the setting changes and try again.

Messages during (When Executing) Data Acquisition

Code	Description	Cause/Corrective Actions
W[631]	Data Lack	Data was unexpectedly lost. Reduce the number of acquired data
		points or connected instruments, or lengthen the scan interval.
E[674]	Communication error	Communication Errors
		Check whether the power to the connected measuring instruments with which you wish to open communications is ON, and whether the cables are connected correctly. Also check the following.
		For Ethernet
		Is the address correct, is the TCP/IP protocol installed in Windows, and is the Ethernet card installed correctly?
		For RS-232 and RS-422-A
		Are the baud rate, port numbers (COM1–COM9), and addresses (RS422) correct? Is the PC serial port valid? Is the cable type correct?
E[675]	Communication time out	Communication timeout
		Same as E[674].
E[800]	CRC check error	CRC check error
-		A CRC error was detected. Check the communication status.
E[801]	Invalid handle	Failed to get communication handle.
		Check the communication status.
E[802]	Error respond	Invalid data received.
		Check the communication status.
W[880]	Do not specify communication port	Specify the communication parameters.
W[881]	Current connecting model	Change the parameters for the main unit.
	configuration is mismatch!	
	The model is:	
W[884]	Retry connection	Connection recovered.
