User's Manual

To Customers Using DAQEXPLORER and AddObserver in Combination
— Regarding the free version upgrade for AddObserver —

Thank you for using the DAQWORX Integrated Data Acquisition Software Suite. For those customers currently using DAQWORX and who have installed R2.06 for purposes of adding, upgrading, and otherwise modifying software please note the following.

Intended for the following customers:

Those using DAQWORX DAQEXPLORER and DAQWORX AddObserver in combination, or DAQWORX DAQEXPLORER and DAQWORX AddObserver Runtime in combination (hereinafter, AddObserver and AddObserver Runtime are referred to as AddObserver).

Please note the following:

With the version of DAQEXPLORER (R4.11) included in DAQWORX R2.06, the method of communicating with upstream software has been changed. Thus, the versions of AddObserver included in R2.06 than can be run in combination with DAQEXPLORER 4.11 are R4.03 or later.

When installing DAQWORX R2.06 over older versions of the software, the following free revision upgrades are performed automatically.

- DAQEXPLORER R4.01–R4.10 (shown as 4.1.1–4.10.1 on the version viewer) → R4.11
- AddObserver R3.01–R3.03 (3.1.1–3.3.1) → not upgraded (free revision upgrade not available)
- AddObserver R4.01–R4.02 (4.1.1–4.2.1) → R4.03

Consequently, if your AddObserver is of version R3.01–R3.03 and you install DAQWORX R2.06, you will no longer be able to use AddObserver in combination with DAQEXPLORER. Therefore, we are offering a free license for upgrading to AddObserver R4.03 at the following Web page.
