Safety Precautions

WARNING

- Install the PR300 in the secondary side of the existing breaker.
- Provide spacing of 50 mm or more between the products.

NOTE

- Do not install the PR300 in the following types of environments, as they may cause the PR300 to malfunction or fail. **Avoid sites:**
 - exposed to significant shock or vibration; where corrosive gases are present; where large amounts of dust are present; exposed to water; exposed to direct sunlight; outside; at altitudes above 2000 m.
- The PR300 mounting position is for vertical panels only.

WARNING

- As there is a danger of electric shock, turn off the power supply and check that the cables to be connected are not conducting electricity before carrying out the wiring procedure.
- For safety, be sure to install a circuit breaker switch that conforms to IEC 60947 near the PR300 so as to be operated easily, and clearly indicate that the device is used to de-energize the PR300.
- The wiring procedure for the PR300 should be carried out by a qualified person (an electrician etc.) with knowledge of electrical matters and who has actual experience.
- Install a current transformer (CT) inside a panel when using a conduit for wiring.
- If the voltage is below 600 V AC, it is possible to connect the PR300 directly without using a voltage transformer (VT) and if the current is below 5 A AC, it is possible to do so without using a current transformer (CT). However, in order to use the PR300 safely, the use of VT and CT is recommended. Use the UL-approved CT for the PR300.
- Perform wiring for the voltage and current input in the same circuit.
- Check the following before turning on the power. Using the PR300 beyond the stated specifications may cause it to heat up and burn out.
 - Check that the power supply voltage, input voltage, and input current values to be applied to the PR300 agree with its specifications.
 - Check that the external wiring is connected to the terminals in accordance with the specifications.
- Do not touch the screws in locations (a) to (f) shown in the wiring diagrams. They are an essential part of the structure of the PR300. Loosening or tightening them may result in a malfunction or failure of the PR300.
- Be sure to attach the terminal cover to prevent electric shock (refer to Chapter 3, "Attaching the Dust Cover and Terminal Cover").

NOTE

When attaching the terminal cover

- Since the terminal cover of PR300 has the structure of preventing electric shock, the terminal cover cannot be attached after completing all wiring. Refer to Chapter 3, "Attaching the Dust Cover and Terminal Cover" before wiring.

Carry out the wiring referring to the diagrams in Sections 2.1 to 2.6. The wiring for voltage input, current input, and power supply is M4 screw terminal connection. For other wiring it is M3 screw terminal connection. The connector for connecting to the Ethernet is RJ45. Use strand wires for the wiring. Wiring cables with a nominal cross-sectional area of 1.25 mm² or thicker are recommended for voltage/current input and power supply; cables with a nominal cross-sectional area of 0.5 mm² or thicker are recommended for other signals. Durable good-contact ring tongue crimping terminals are recommended to use.

Applicable terminals	ød (mm)	A (mm)	F (mm)	B (mm)
M4	4.4 max.	7.0 max.	7.8 max.	—
M3	3.3 max.	5.8 max.	6.7 max.	4.7 max.

Applicable terminals	Recommended tightening torque	Applicable wire size
M4	1.2 N•m	1.04 to 2.63 mm ²
M3	0.6 N•m	0.25 to 1.65 mm ²

1. Installation

1.1 Installation with the ANSI 4-inch Round Form

The PR300 can be installed so that it handles ANSI 4-inch round form or JIS 110-square instruments panel cutouts by attaching the "JIS/ANSI-mounting kit" accessory.

1.1.3 Mounting Method

1 Set the direction of the panel-mounting bracket.

The diagram below shows the front of the bracket (the side into which the panel-mounting bolt is inserted). Rotating the bracket 90° makes the bracket compatible with either ANSI or JIS panel cutouts. Set the bracket to either the ANSI or JIS mark according to which type of panel you are installing, as shown in the diagram.

2 Insert two panel-mounting bolts into the front of the panel-mounting bracket as shown in the diagram.

3 Fix the panel-mounting bracket securely to the back of the PR300 with two bracket-fixing screws as shown in the diagram. (recommended tightening torque: 0.4 N•m)

4 Attach the bezel from the front of the PR300.

5 Insert the PR300 from its rear through the mounting cutout in the panel as shown in the diagram.

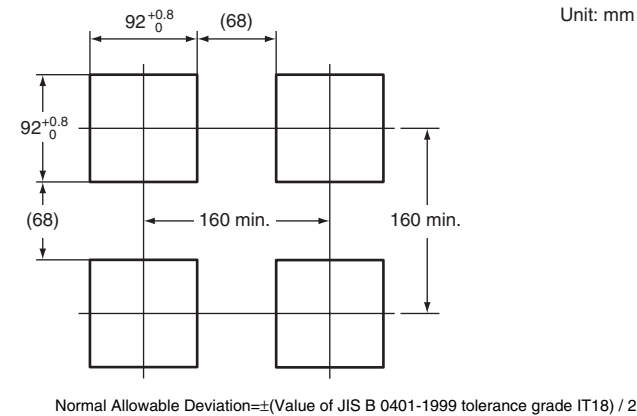

6 Secure the PR300's panel-mounting bolts by tightening them with the washers and nuts. (recommended tightening torque: 2.0 N•m)
