Studio ONE

PREMIUM AUDIO CABLES
CÂBLES AUDIO PROFESSIONNELS

Studio One Premium Audio Cables

Studio One cables deliver unmatched reliability with uncommon clarity and tone. High quality Amphenol connectors with the patented 'Jaws' internal strain relief system ensure the Studio One cable ends will not fail even during the most enthusiastic of live performances. The cable itself is designed around the 18-gauge center conductor that guarantees transparent signal transfer from source to mixer or amplifier. A rugged ultra-flexible PVC cable jacket and pure copper braided shielding ensure your sound makes it to the mix night after night without additional background noise.

Studio One cables deliver unmatched reliability with uncommon clarity and tone.

The Speaker System

Cable Issues

The quality and quantity of speaker cable is a real factor in determining a system's overall impedance. Cable presents the overall load with additional resistance. It is even possible for speaker cable to add inductance.

{TIP - In certain rare cases you might find that coiling a speaker cable the right way can get rid of radio frequency interference. Occasionally, the speaker lines effectively pick up powerful radio signals. This interference then goes back into the amplifier's grounding, is amplified and comes out the speaker system. In a few instances, it has been reported that winding the cables into coils and taping them in place actually helped to reduce the problem.}

Resistance, however, is the main additive and it varies in direct proportion to the gauge and length of the wire. The effect that it has on the system's impedance is easy to chart out; what we offer instead is the effect that cable has on the amplifier's delivered power. The reason we do this is that the percentage of power loss varies, not only according to the length and gauge of wire, but also according to the speaker impedance. As you will notice in the "CABLE LOSS CHART" the lower the speaker load, the higher the loss.

For obvious reasons, it makes sense to pay attention to what speaker cable you are using. In general, the less wire, the better. The heavier the gauge, the better. We suggest that you look over the "CABLE LOSS CHART" and spend some time studying it. Proper speaker cable selection could dramatically improve your system performance!!
