Correction: Mechanisms of Resistance to an Amino Acid Antibiotic That Targets Translation

Sandro F. Ataide, Sharnise N. Wilson, Sandy Dang, Theresa E. Rogers, Bappaditya Roy, Rajat Banerjee, Tina M. Henkin, and Michael Ibba

The authors wish to note the proposal that lysine riboswitches are the primary targets for the antimicrobial lysine analogue AEC and that LysRS is not a target for AEC is incorrectly attributed to ref 27 on page 820. These hypotheses had not been previously proposed. We apologize for any confusion this might have caused.
