

Retraction Notice for Carbon Nanotubes Are Able To Penetrate Plant Seed Coat and Dramatically Affect Seed Germination and Plant Growth

[*ACS Nano* 2009, 3, 3221–3227. DOI: 10.1021/nn900887m]. Mariya Khodakovskaya,* Enkeleda Dervishi, Meena Mahmood, Yang Xu, Zhongrui Li, Fumiya Watanabe, and Alexandru S. Biris*

This paper was withdrawn due to violations of the Ethical Guidelines to Publication of Chemical Research of the American Chemical Society for reason of unacceptable redundant inclusion of text and graphics from two works previously published in other journals (Morphology of Multi-Walled Carbon Nanotubes Affected by the Thermal Stability of the Catalyst System. E. Dervishi, Z. Li, A. R. Biris, D. Lupu, S. Trigwell, A. S. Biris. DOI: 10.1021/cm062237l; Influence of the RF Excitation of the Catalyst System on the Morphology of Multi-walled Carbon Nanotubes. A. S. Biris, T. C. Schmitt, R. B. Little, Z. Li, Y. Xu, A. R. Biris, D. Lupu, E. Dervishi, S. Trigwell, D. W. Miller, Z. Rahman. DOI: 10.1021/jp0740346). Specifically, Figures 1b, 1c, and 1d were reproduced from these sources without acknowledging their prior use. In addition, Figure 1a was also previously published in another article (Analysis of effluent gases during the CCVD growth of multi-wall carbon nanotubes from acetylene. T.C. Schmitt, A.S. Biris, D.W. Miller, A.R. Biris, D. Lupu, S. Trigwell, Z.U. Rahman. DOI: 10.1016/j.carbon.2006.01.008).

Manuscript DOI: 10.1021/jp0740346 has also been withdrawn. The original *ACS Nano* paper was published ASAP on September 22, 2009, and withdrawn on August 20, 2012.
