

Cryogenics & Rocket Fuels

ENGINEERING SPECIALIST

Salary Open

Leading consulting engineering organization with headquarters in New York offers a career opportunity with management potential to a qualified specialist in the cryogenic and rocket fuel fields.

Proven accomplishments in the supervision of engineering and design of cryogenics and rocket fuel systems essential. At least 5 years' experience in the over-all design of piping, pumps, heat exchangers, storage vessels, materials, and the fabrication of equipment for these applications as well as familiarity with cost and layout of such systems required.

Send resume in complete confidence to Box #10 B.

**SENIOR
PRELIMINARY
DESIGN ANALYST**

**FOR SPACE GUIDANCE
& CONTROL**

Senior Management position involves supervision of a staff group of about 10 engineers in a preliminary design organization.

Challenging assignment is to conduct preliminary design investigations in the fields of space guidance and control.

The man we need will probably have an advanced degree from an accredited university, U.S. Citizenship and at least 12 years' professional experience including Systems Engineering, Space Navigation, Guidance, Control Systems, Orbital Dynamics, Radar Systems, Inertial Components, Computers.

He must have a personality which enables him to work easily and well with a variety of people—plus intellectual speed which permits him to react quickly to any situation. He must be inventive and imaginative, will probably hold several patents and will have had papers published in professional journals. His present position might be that of a preliminary design section head or staff head in an equipment design group.

If you feel that you qualify by training, experience and interest—and wish immediate consideration, please airmail your resume to:

**MR. ROBERT A. MARTIN
Head of Employment
Hughes Aerospace Divisions
11940 W. Jefferson Blvd.
Culver City 26, California**

HUGHES

HUGHES AIRCRAFT COMPANY

AEROSPACE DIVISIONS

An equal opportunity employer.

NASA

GEORGE C. MARSHALL SPACE FLIGHT CENTER HUNTSVILLE, ALABAMA AT NASA, YOU'RE IN THE AEROSPACE CENTER OF THE FREE WORLD

AEROSTRUCTURAL DYNAMICS

Performs as key scientist developing theoretical methods and approaches for novel space vehicle problems in aerostuctural dynamics and control. Areas involve non-rigid dynamics, frequencies and mode shapes, control feed-back analysis, propellant sloshing, oscillatory aerodynamics, stability, etc. Also, performs as chief of an organization within a division of the George C. Marshall Space Flight Center.

An M.S. or Ph.D. degree in Physics, Aerodynamics or Mathematics is required.

Salary range: \$12,845 to \$18,000.

ADVANCED CONTROL SYSTEMS

Performs as key scientist developing theoretical methods and approaches for novel space vehicle problems for advanced control systems. Areas involve analysis and synthesis of non-linear optimum control systems, adaptive control, definition of optimization criteria, etc. Also, performs as chief of an organization within a division of the George C. Marshall Space Flight Center and directs and supervises contractor and university efforts in the areas of advanced control systems.

An M.S. or Ph.D. degree in Physics or Mathematics is required.

Salary range: \$16,845 to \$18,000.

Please submit Standard Form 57 (available at any post office), or a detailed resume plus college transcript to:

**Personnel Director
Dept. WV
George C. Marshall
Space Flight Center
Huntsville, Alabama**

Positions filled under USCS Ann. 252B.

An Equal Opportunity Employer

Application of Inertial Guidance to Space Missions, G. R. Pitman Jr., pp. 416-442.

The Disturbance of Pendulum and Gyroscopic Apparatus by the Acceleration of the Vertical, M. Schuler, pp. 443-454 (transl. from Phys. Z. 24, 334-350, July 1923).

Artificial Earth Satellites, edited by L. V. Kurnesova (Plenum Press, New York, 1961), Vol. 6, 170 pp.

Electron Concentration in the Ionosphere to Altitudes of 420-470 km, Measured During IGY by Means of Electro-Magnetic Radiation from Soviet Geophysical Rockets, K. I. Gringauz and V. A. Rudakov, pp. 57-76.

Results of Measurements of the Concentration of Positive Ions in the Atmosphere, Using Ion Traps Mounted

**SUPERVISOR,
SURVEYOR
SPACE TRACKING
STATION**

Responsible assignment is immediately available for a Senior Engineer to supervise Hughes participation in the SURVEYOR Program—including operation of the spacecraft on the lunar surface.

Location: Goldstone, California, deep-space tracking station.

Requirements: Maturity, a degree in E.E. or Physics from an accredited university; U.S. Citizenship; about 10 years' experience in communications, telemetry, video systems (including field work on tracking and/or radar sites); demonstrated ability to work with other contractors and the customer and to supervise the activities of a group of other engineers and technicians.

For immediate consideration, please airmail complete resume to:

MR. ROBERT A. MARTIN
Head of Employment
Hughes Aerospace Divisions
11940 W. Jefferson Blvd.
Culver City 28, California

Creating a new world with Electronics

HUGHES AIRCRAFT COMPANY
AEROSPACE DIVISIONS

An equal opportunity employer.
