

1965; and his Ph.D. from Purdue University in 1969. He joined NASA Ames Research Center, 1962 to 1965. Studies there included aerodynamics of preliminary SST designs, gasdynamic effects of planetary atmospheres, and development of low temperature ablaters for model testing.

In 1965 he was admitted to Purdue University where he conducted research on shock wave attenuation and acoustic-turbulent interactions with application to free jet spreading.

Since joining The Boeing Company, Dr. Simcox has worked in research and management in the Noise Technology Staff. His first research was to study the noise generated by hot and cold choked jets with emphasis on shock-related noise fields. Research included jet noise characteristics, and noise characteristics of coannular (bypass) jets, in-flight effects, and suppressor systems. He served as program manager on several proposal teams and contracts including manager for Task III of the DOT/SST Follow-On contract to develop efficient means of noise suppression. He is currently Noise Technology Laboratory Chief.

Dr. Simcox is an Associate Fellow of the AIAA and a past member of the Acoustical Society of America.

Thomas M. Weeks

Dr. Weeks completed his degree work at Syracuse University, Department of Mechanical and Aerospace Engineering in 1965. He entered active commissioned service that year assigned to the Air Force Flight Dynamics Lab at Wright Patterson AFB, Ohio. He selected to work in the area

of electrogasdynamics at the nearly completed 50 megawatt facility. In 1968, he separated from the Air Force but chose to remain at the same location working as a civilian.

He was assigned to the Analysis Group attached to the Aeromechanics Staff in 1972 working on transonic wind tunnel wall interference. Then, in 1976, he became Tech Manager of the External Aerodynamics Group of the Aerodynamics and Airframe Branch where he currently supervises eight engineers responsible for advanced aeroprediction methodology and new concept formulation and development.

Dr. Weeks is an Associate Fellow of the AIAA.

We are all extremely indebted to the members of the editorial department for their constant support and attention to detail. In particular I'd like to thank Marie D'Amico, Dave Staiger, and Norma Brennan.

Our International Editors continue to supply articles of current interest in their respective countries. We shall publish the second International Issue in May.

Finally I come to the reviewers listed below. Our success comes in large part due to their promptness and thoroughness. The "trivial review" is becoming rare. Reviewers are encouraged to continue their very fine performance during the coming year.

Thomas M. Weeks
Editor-in-Chief

Reviewers for *Journal of Aircraft*, September 1, 1979–August 31, 1980*
