

Journal Policy on Biographies

HERETOFORE, we have not published either photographs or biographies of authors. Our new policy will be to give the authors of full-length papers or survey articles the option to publish both photographs and biographies provided that there are no more than three authors. The biography must not be longer than a short paragraph. We will begin with newly submitted papers and those that have not yet completed the review process.

Following are photographs and biographies of the 1988 Editorial Team. These should serve as examples for those authors who wish to prepare biographies. I welcome two new people to the masthead this year. Professor Anthony Calise of Georgia Tech will handle papers on optimal control and estimation. Professor David Schmidt will handle papers on aircraft stability and control. I look forward to working with both of them. Retiring is Dr. Richard Battin who has been with this journal since its inception and before that was an Associate Editor of the *AIAA Journal*. He is the Lou Gehrige of Associate Editors. I am particularly grateful for his many

years of service and wish him the best, not only for his retirement from this journal, but for his retirement from his "real job" here at the Draper Laboratory. Also retiring is Dr. Vic Lebacqz who, for the last four years, has not only done everything he has been called upon to do as an Associate Editor but has, through his humorous approach to this demanding duty, provided both my secretary and me with enough laughter to liven up many of our days. Vic—We'll miss the new experiences but we've saved all the electronic messages from Dr. X to liven up this winter's snowy, dark days.

Following the editorial team you will see the list of some of the most important people to this journal—our reviewers. These are the people who reviewed papers between October 1, 1986 and September 30, 1987. Thank you all for your indispensable help.

Donald C. Fraser
Editor-in-Chief
