

to the breakthrough. These will be the invited personal reminiscences of each author and, as such, will present his own version of events. The first of these, on modern estimation procedures, appears as the lead article in this issue.

Let me turn now to a report on a topic more current for some of our readers than those above—the title of this publication. A year ago in my annual editorial I observed that there were a number of people who wanted to see the word “Dynamics” appear in the title and invited correspondence on that subject. We did receive letters and cards on both sides of the issue. At its October meeting the Publications Committee, the controlling body of all AIAA publications, addressed this issue. It counseled that the addition would not be in the best interest of further development of the applications orientation of this journal, that the word dynamics is by no means uniquely associated with our field, that continuity of the archival publication could be confused, and that the title would be too long. It then voted to leave the title as is and emphasize with larger print and boldface type the dedication to Dynamics and Control which has always appeared at the bottom of the front cover of every issue. The result is as you see on the cover of this issue. Dynamics as it pertains to the basic motion of the plants we control remains, however, very much within our scope.

Each year we have changes to report. This year Ronald O. Anderson retires from his duties as Associate Editor. Ron began his service in this capacity as a member of the original team of editors when we founded this journal three years ago. As such, he participated in the intensive efforts at the beginning to create this new publication in a very short period of time. He then went on, as did the others, to routinely handle his share of the reams of manuscripts and correspondence we receive each year. I wish him well in his future activities and hope he enjoys the time which he now has restored to his day.

I am pleased to name to the Associate Editor post created by this retirement Dr. John W. Edwards of the Loads and Aeroelasticity Division of the NASA Langley Research Center. Dr. Edwards' interests have been in aircraft controls, aerodynamics, and structural dynamics. He will be handling papers on aircraft applications, stability, and control. I welcome him to the masthead and look forward to working with him in this new capacity.

Finally, there appears below a list of the anonymous cadre without whom any archival publication cannot survive—our reviewers. On behalf of the entire editorial staff I wish to thank them for their efforts.

*Donald C. Fraser*  
Editor-in-Chief

### **Reviewers for *Journal of Guidance and Control*, September 1, 1979—August 31, 1980\***
