Absolute Crystal Structure of an *N*-Acylsultam Derivative*

BY G. BERNARDINELLI

Laboratoire de Cristallographie aux Rayons X, Université de Genève, 24 Quai Ernest Ansermet, CH-1211 Genève 4, Switzerland

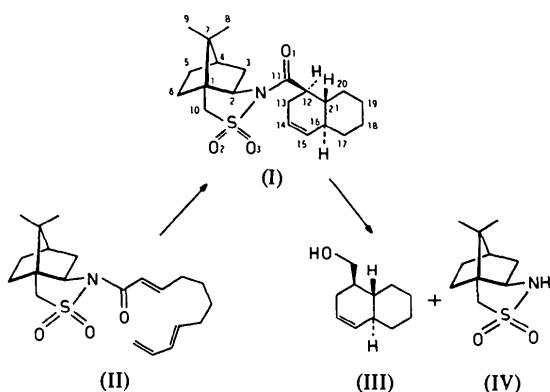

AND W. OPPOLZER AND D. DUPUIS

Département de Chimie Organique, Université de Genève, 30 Quai Ernest Ansermet, CH-1211 Genève 4, Switzerland

(Received 5 November 1985; accepted 8 July 1986)

Abstract. The title compound (I) was obtained by EtAlCl₂-promoted asymmetric intramolecular Diels–Alder reaction of the camphorsultam derivative (*E,E*)-10,10-dimethyl-4-(2,8,10-undecatrienoyl)-3-thia-4-azatricyclo[5.2.1.0^{1,5}]decane 3,3-dioxide (II); reduction of (I) gave the enantiomerically pure bicyclic alcohol 1,2,4a,5,6,7,8,8a-octahydro-1-naphthylmethanol (III) with regeneration of the unsubstituted chiral sultam precursor (IV) [Oppolzer & Dupuis (1985). *Tetrahedron Lett.* **26**, 44, 5437–5440]. (I): C₂₁H₃₁NO₃S, M_r=377.6, orthorhombic, P2₁2₁2₁, a=8.0498(12), b=11.973(2), c=20.714(3) Å, V=1996.4(5) Å³, Z=4, D_x=1.256 Mg m⁻³, λ(Mo Kα)=0.71069 Å, μ=1.735 cm⁻¹, F(000)=816, m.p. 477–479 K, [α]_d²⁰=−121.0° (c=0.51% in CHCl₃), room temperature, R=0.052 for 963 observed reflections [|F_o|≥4σ(F_o) and |F_o|≥8.0]. The chirality of enantiomerically pure (I) was confirmed from the known absolute configuration of the camphorsultam moiety as well as by least-squares refinement of the absolute-structure parameter x=0.05(31) [Bernardinelli & Flack (1985). *Acta Cryst.* **A41**, 500–511].

Experimental. Single crystals of (I) grown from methanol solution at room temperature. Colourless crystal of average dimensions 0.11×0.30×0.50 mm; Philips PW 1100 diffractometer, graphite-monochromated Mo Kα; room temperature; cell dimensions from 24 reflections [2θ=22–34°]; data collection: sinθ/λ≤0.49 Å⁻¹, h 0–7, k 0–11, l 0–19; ω/2θ scans, ω-scan angle 1.2°; 2 standard reflections varied by max. of 1.6%; 1121 measured reflections; 963 observed with |F|≥4σ(F) and |F|≥8, Lorentz–

* (1*S*,5*R*,5*'R*)-10,10-Dimethyl-4-(1,2,3,4,4aβ,5,6,8aα-octahydro-1β-naphthoyl)-3-thia-4-azatricyclo[5.2.1.0^{1,5}]decane 3,3-dioxide.

polarization; no absorption correction; systematic absences: $h\ 00$: $h = 2n + 1$, $0k0$: $k = 2n + 1$, $00l$: $l = 2n + 1$; distribution of data $\langle E^2 - 1 \rangle = 0.794$ indicated non-centrosymmetric space group; structure solved by MULTAN80 (Main, Fiske, Hull, Lessinger, Germain, Declercq & Woolfson, 1980). Two-block-matrix least squares using $|F|$ values. 237 parameters refined; no secondary-extinction correction; all coordinates of H atoms calculated. $R = 5.2\%$, $w(F) = 1$. Max. and av. ratio of |shift| to e.s.d.: 0.66 and 0.07 respectively; max. and min. heights in final difference electron density map 0.40 and -0.33 e \AA^{-3} ; atomic scattering factors and anomalous-dispersion terms for S, N and O atoms from International Tables for X-ray Crystallography (1974); all calculations performed with a local version of XRAY76 (Stewart, Machin, Dickinson, Ammon, Heck & Flack, 1976) and ORTEPII (Johnson, 1976).* Atomic coordinates are given in Table 1, bond lengths and torsional angles in Table 2 and a stereoview of the molecule in Fig. 1.

* Lists of structure factors, atomic positional and thermal parameters for all atoms and other information in the printed form of the Standard Crystallographic File Structure of Brown (1985) have been deposited with the British Library Lending Division as Supplementary Publication No. SUP 43103 (24 pp.). Copies may be obtained through The Executive Secretary, International Union of Crystallography, 5 Abbey Square, Chester CH1 2HU, England.

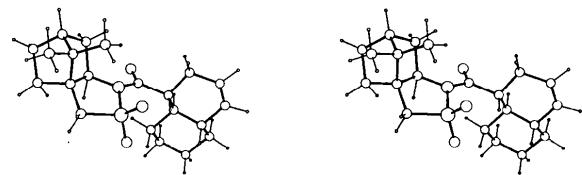

Fig. 1. Stereopair showing the configuration of the molecule.

We acknowledge the help of Mrs B. Künzler in the preparation of the drawings.
