

**Related literature.** (3) was prepared by thermolysis of 2-(methoxybenzyl)-2-phenyl-4-trifluoromethyl-5(2*H*)-oxazolone, (2), which in turn is available from 5-(4-methoxybenzyloxy)-2-phenyl-4-trifluoromethyloxazole, (1), by a thermally induced rearrangement (Burger, Schierlinger, Gaa, Geith, Sewald & Müller, 1989). The reaction sequence (1)  $>$  (2)  $>$  (3) is a unique combination of remarkable reaction steps: the rearrangement (1)  $>$  (2) represents a non-concerted 1,5-benzyl-group migration from oxygen to carbon (Burger, Gaa, Geith & Schierlinger, 1989). The transformation (2)  $>$  (3) involves a nitrile ylide intermediate which is formed by [3 + 2] cyclo-elimination of carbon dioxide from (2). The

1,3-dipolar species surprisingly acts as a carbene and inserts into the donor substituted aryl moiety to form a cycloheptatriene ring system via [2 + 1] cyclo-addition and electrocyclic ring opening. Finally, during work-up the 1-pyrroline substructure undergoes an autoxidation process to give compound (3).

We thank the Deutsche Forschungsgemeinschaft (Bonn-Bad Godesberg) and the Fonds der Chemischen Industrie (Frankfurt, Main) for financial support.

## Structure of the 1:1 Adduct of 2-Phenyl-4-(4,6-dimethyl-2-pyrimidinyl)aminomethylene-5(4*H*)-oxazolone and Acetic Acid

BY IVAN LEBAN, JURIJ SVETE, BRANKO STANOVNIK AND MIHA TIŠLER

Department of Chemistry and Chemical Technology, University of Ljubljana, 61001 Ljubljana, POB 537, Slovenia, Yugoslavia

(Received 6 November 1990; accepted 2 January 1991)

**Abstract.**  $C_{16}H_{14}N_4O_2 \cdot C_2H_4O_2$ ,  $M_r = 354.4$ , monoclinic,  $P2_1/c$ ,  $a = 12.768$  (2),  $b = 7.416$  (3),  $c = 19.206$  (3) Å,  $\beta = 98.71$  (1)°,  $V = 1797.6$  (8) Å<sup>3</sup>,  $Z = 4$ ,  $D_x = 1.309$  g cm<sup>-3</sup>,  $\lambda(Mo K\alpha) = 0.71069$  Å,  $\mu = 0.887$  cm<sup>-1</sup>,  $F(000) = 744$ ,  $T = 293$  (2) K, final  $R = 0.044$  and  $wR = 0.069$  for 1441 observed reflections. The phenyl, pyrimidinyl and oxazolone rings are planar to within 0.010 (5), 0.009 (4) and 0.009 (4) Å, respectively and the whole molecule to within 0.117 (4) Å. The molecule of acetic acid seems to stabilize the planar shape via two hydrogen bonds of the type O—H···N [2.756 (5) Å] and O···H—N

[2.891 (5) Å]. The bond lengths and angles agree with expected values.

**Experimental.** The crystals of the title compound were prepared in an acetic acid solution. A plate-like colourless single crystal with poor scattering properties (0.80 × 0.60 × 0.16 mm) was sealed, together with a drop of mother liquor, into the glass capillary (crystals without the liquid decomposed when exposed to air). Cell dimensions were determined from the angular settings of 25 reflections with  $9 < \theta < 12$ ° measured on an Enraf–Nonius CAD-4 diffract-

tometer. Space group  $P2_1/c$  was determined from the systematic absences. Intensity data were collected in the range  $1 < 2\theta < 54^\circ$  with variable speed  $\omega - 2\theta$  scans using graphite-monochromated Mo  $K\alpha$  radiation: max. scan time 30 s, scan width  $(0.8 + 0.3\tan\theta)^\circ$  and aperture  $(2.4 + 0.9\tan\theta)$  mm. The background was measured for 1/4 of the scan time at each scan limit. Three standard reflections were monitored at intervals of 500 reflections. The crystal orientation was checked every 2 h. Data were corrected for intensity variation (-2.2%) and  $L_p$  effects, but absorption was ignored. 3910 unique reflections were collected of which 1441 were considered observed [ $I > 2\sigma(I)$ ,  $\sigma(I)$  based on counting statistics] and used

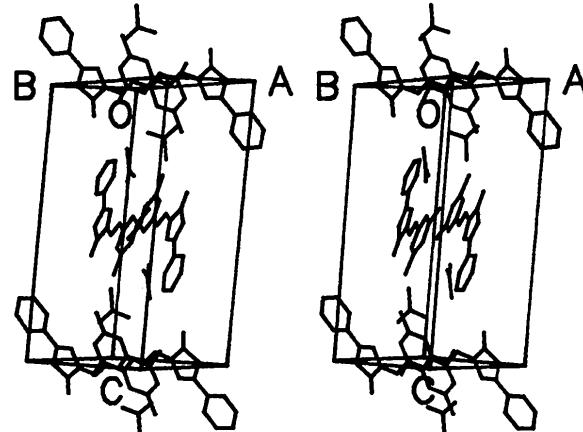

Fig. 2. Stereoview of the molecular packing.

in the refinement; range of  $hkl$   $h = 13/13$ ,  $k 0/8$ ,  $l 0/22$ . The structure was solved with MULTAN80 (Main, Fiske, Hull, Lessinger, Germain, Declercq & Woolfson, 1980). The initial structural model was

refined by full-matrix least squares minimizing the function  $\sum w(|F_o| - |F_c|)^2$  with *SHELX76* (Sheldrick, 1976). Final *R* and *wR* values were 0.044 and 0.069, respectively with  $w = 0.260/[\sigma^2(F_o) + 0.0094F_o^2]$  and 293 variables. The H-atom positions were found in  $\Delta\rho$  map and included in the refinement with a constraint imposed on the C—H bonds. The common isotropic temperature factor *U* for methyl H atoms was 0.151 (9)  $\text{\AA}^2$  and for other H atoms was 0.071 (4)  $\text{\AA}^2$ . The final  $\Delta\rho$  showed residual electron density within +0.12 and -0.08 e  $\text{\AA}^{-3}$ . Max. value of  $\Delta/\sigma$  at convergence was 0.62 (*z*, H142). Scattering factors for C, N and O were from *International Tables for X-ray Crystallography* (1974, Vol. IV), for H from Stewart, Davidson & Simpson (1965). All calculations performed on the VAX 8550 under VMS 5.2 at University Computer Centre, Ljubljana. Additionally, the *GX* (Mallinson & Muir, 1985) package was used for data processing and final interpretation of molecular geometry. The final atomic parameters are given in Table 1.\* Bond lengths and angles are given in Table 2. Views of the molecule with the atomic numbering and of the molecular packing are presented in Figs. 1 and 2.

\* Lists of structure factors, anisotropic thermal parameters, H-atom coordinates, selected torsion angles and the results of calculated mean-planes angles have been deposited with the British Library Document Supply Centre as Supplementary Publication No. SUP 53890 (13 pp.). Copies may be obtained through The Technical Editor, International Union of Crystallography, 5 Abbey Square, Chester CH1 2HU, England.

**Related literature.** Recently Stanovnik, Svetec & Tišler (1987), Stanovnik, Svetec, Tišler, Žorž, Hvala & Simonič, (1988) and Svetec, Stanovnik, Tišler, Golič & Leban (1989) have described the syntheses of  $\beta$ -heteroaryl amino- $\alpha,\beta$ -dehydro- $\alpha$ -amino acids and their derivatives from *N*-heteroaryl formamidines and 2-phenyl-5-oxo-1,3-oxazole in which 4-heteroarylaminomethylene-2-phenyl-5(4*H*)-oxazolones are formed as novel intermediates.

The financial support from the Ministry of Science, Research and Technology, Slovenia, is gratefully acknowledged.
