Abstract

The title nitrile (6,7,8-trioxabicyclo[3.2.1]octane-1-acetonitrile, C₇H₉NO₃) was prepared by ozonolysis of cyclopentenylacetonitrile. Crystals of the compound display typical metric parameters.

Comment

Ozonolysis of substituted cyclopentenes is known to generate primary ozonides that regioselectively fragment to the corresponding bicyclic ozonides (Bunnelle & Lee, 1992). Most of these bicyclic trioxanes have been analyzed by NMR and only a few have afforded crystals suitable for X-ray crystallography (Bunnelle, Isbell, Barnes & Qualls, 1991). During our studies on the reactivity of unsaturated nitriles (Fleming & Huang, unpublished results), we prepared the title compound, (I), by ozonolysis of cyclopentenylacetonitrile.

The six-membered pyran ring exists in a chair conformation, in accord with theoretical calculations (Bunnelle & Isbell, 1992). Recently, average parameters were published for bicyclic ozonides [O—O 1.473, C—(O—O) 1.443 and C—O 1.418 Å (Buckleton, Clark & Rickard, 1995), derived from the Cambridge Structural Database], and the metric parameters of (I) are quite similar. Buckleton, Clark & Rickard (1995) note that many of these ozonides display marked asymmetry in the C—O bonds involving the peroxy group, and similar asymmetry is found in the title compound. The underlying causes of the asymmetry in the different ozonides must be compound specific. For example, in two cases which have chemically equivalent substituents on the two ozonide ring C atoms, one exhibits asymmetry (Cummins, Drew, Mann & Walsh, 1983) while the other does not (Jerzykiewicz, Dziewońska-Baran, Baran & Lis, 1993). In the title compound, we suggest that the asymmetry is the net result of three possible effects: an interplay between the ether and peroxide components of the ozonide; an inductive effect of the nitrile; a steric packing effect. The first of these seems the most likely since the asymmetry in the C—O bonds involving the peroxy group typically accompanies asymmetry in the C—O bonds of the ether linkage, and the C atom that participates in the shorter C—O ether bond usually participates in the longer C—O peroxy bond (Cummins *et al.*, 1983; Bunnelle *et al.*, 1991; Karban, McAtee Jr, Belew, Mullica, Milligan & Korp, 1978; Miura, Ikegami, Nojima, Kusabayashi, McCullough & Nagase, 1983).

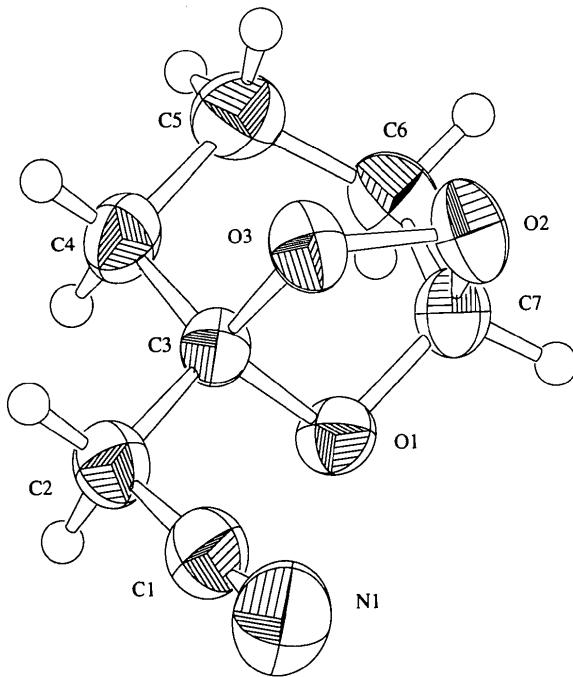

Fig. 1. A perspective drawing of the title compound with displacement ellipsoids drawn at the 50% probability level.

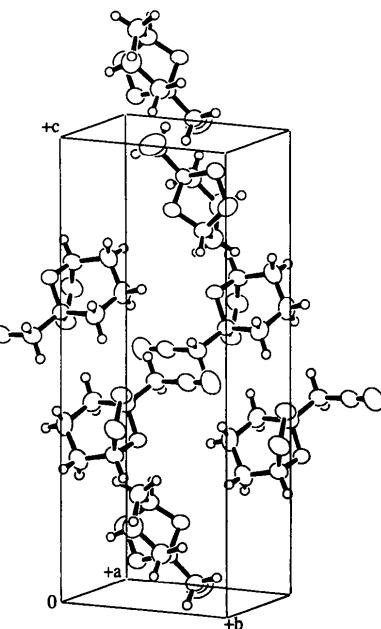

Fig. 2. A cell packing diagram with displacement ellipsoids drawn at the 50% probability level.

Experimental

A stream of ozone was passed through a cold (195 K) dry CH_2Cl_2 solution (5 ml) of cyclopentenylacetonitrile (112.3 mg, 1.05 mmol) until the solution became blue. Nitrogen was then passed through the solution until the excess ozone was displaced. The solution was allowed to warm to room temperature, and the solvent was removed under reduced pressure (rotary evaporator, vacuum pump) to afford 115.4 mg of the title compound (71%) as colorless crystals.

Two Schiff Base Ligands Derived from 1,2-Diaminocyclohexane

JASON C. CANNADINE, JONATHAN P. CORDEN, WILLIAM ERRINGTON, PETER MOORE AND MALCOLM G. H. WALLBRIDGE

Department of Chemistry, University of Warwick, Coventry CV4 7AL, England. E-mail: msrpq@csv.warwick.ac.uk

(Received 17 July 1995; accepted 10 October 1995)

Abstract

The crystal structures of the free ligands 2,2'-[1,2-cyclohexanediy]bis(nitrilomethylidyne]bisphenol, C₂₀H₂₂N₂O₂, (I), and 2,2'-[1,2-cyclohexanediy]bis(nitriloethylidyne]bisphenol, C₂₂H₂₆N₂O₂, (II), have been determined. In both molecules the N—O distances are indicative of intramolecular hydrogen bonding. In compound (I), the two aromatic rings are inclined at an angle of 56.5 (1) $^\circ$ and the O···O separation is 6.082 (3) \AA ; in compound (II) the corresponding values are 83.15 (8) $^\circ$ and 5.544 (5) \AA . Thus, it is evident that the methyl groups in (II) have a very significant effect upon the overall conformation.

Comment

Relatively few crystal structures have been reported for quadridentate Schiff base ligands (Corden, Errington,
