## 2-(2-Methoxyphenylhydrazono)-3-oxobutanoic acid

The crystal structure of the title compound, $\mathrm{C}_{11} \mathrm{H}_{12} \mathrm{~N}_{2} \mathrm{O}_{4}$, contains two crystallographically independent molecules in the asymmetric unit. The molecules exist in the stereoisomeric $Z$ form, with the NH group forming an intramolecular $\mathrm{N}-$ $\mathrm{H} \cdots \mathrm{O}$ hydrogen bond with the carbonyl O atom of the carboxyl group. It is also confirmed that the compound exists in the hydrazone form and not the azo form.

## Comment

As part of our project to study the crystal structures of a series of phenylhydrazones and their stereochemistry, the crystal structure of the title compound, (I), has been determined. These compounds can exist either in the normal hydrazone form ( $\mathrm{Ph}-\mathrm{NH}-\mathrm{N}=\mathrm{C}<$ ) or in the azo form $(\mathrm{Ph}-\mathrm{N}=\mathrm{NH}-$ $\mathrm{CH}<$ ) and have been extensively investigated by various workers, using both chemical and a range of instrumental methods (Prasad \& Sahay, 1993).

(I)

The asymmetric unit of (I) contains two molecules; the corresponding bond lengths and angles of these two molecules agree with each other. The superposition of the non-H atoms of these two molecules (one molecule inverted) resulted in an r.m.s. deviation of $0.04 \AA$. The $\mathrm{C} 6-\mathrm{C} 1-\mathrm{N} 1-\mathrm{N} 2\left[-7.6(3)^{\circ}\right]$ and $\mathrm{C}^{\prime}-\mathrm{C1}^{\prime}-\mathrm{N} 1^{\prime}-\mathrm{N} 2^{\prime}\left[5.4\right.$ (3) ${ }^{\circ}$ ] torsion angle values show that these two molecules are slightly distorted from planarity. The structure determination shows that both molecules exist in the stereoisomeric $Z$ form, with the NH group forming an intramolecular $\mathrm{N}-\mathrm{H} \cdots \mathrm{O}$ hydrogen bond with the carbonyl O atom of the carboxyl group (Fig. 1). The carbonyl O atom of the carbomethoxy group is involved in an intramolecular O $\mathrm{H} \cdots \mathrm{O}$ hydrogen bond with the carboxyl group (Table 2). In the crystal structure, the inversion-related pairs of the molecules are stacked along [121].

## Experimental

The title compound, supplied by Dr N. Prasad, Department of Chemistry, B. R. Ambedkar University, Muzaffarpur, India, was prepared by partial hydrolysis of ethyl 2-(2-methoxyphenyl-hydrazono)-3-oxobutyrate by the action of strong acids (Prasad et al., 1994) and was recrystallized from methanol at room temperature.

After location in a difference map, all the H atoms were placed at calculated positions and were allowed to ride on their respective parent atoms, using SHELXL97 (Sheldrick, 1997) defaults.

Data collection: CAD-4 EXPRESS (Enraf-Nonius, 1994); cell refinement: CAD-4 EXPRESS; data reduction: MolEN (Fair, 1990); program(s) used to solve structure: SHELXS97 (Sheldrick, 1997); program(s) used to refine structure: SHELXL97 (Sheldrick, 1997); molecular graphics: ORTEP-3 (Farrugia, 1997); software used to prepare material for publication: SHELXL97.

The authors thank Dr N. Prasad and his co-workers in the Department of Chemistry, BRA Bihar University, for the gift of the crystals of the title compound, and the Regional Sophisticated Instrumentation Centre, Bose Institute, Kolkata, India, for the data collection.
