Key indicators

Single-crystal X-ray study

$T = 293\text{ K}$

Mean $\sigma(\text{C}-\text{C}) = 0.011\text{ \AA}$

R factor = 0.089

wR factor = 0.167

Data-to-parameter ratio = 12.0

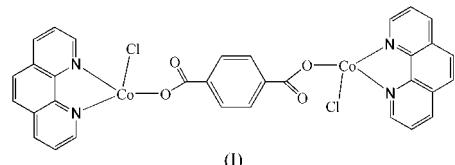

For details of how these key indicators were automatically derived from the article, see <http://journals.iucr.org/e>.

In the centrosymmetric title complex, $[\text{Co}_2\text{Cl}_2(\text{C}_8\text{H}_4\text{O}_4)_2(\text{C}_{12}\text{H}_8\text{N}_2)_2]$, each Co atom is surrounded by one O atom from a terephthalate dianion, a Cl atom and two N atoms from a 1,10-phenanthroline heterocycle in a distorted square-planar arrangement. The terephthalate dianion lies on an inversion centre and bridges two Co atoms.

Comment

Among the metal complexes of terephthalic acid (Deakin *et al.*, 1999; Fun *et al.*, 1999; Li *et al.*, 1998; Mori & Takamizawa, 2000), the copper-phenanthroline system has been well studied. There are at least five compounds that display structural diversity (Sun *et al.*, 2000, 2001; Xiao & Zhu, 2003; Zhu *et al.*, 2004). To our knowledge, the cobalt-phenanthroline system is less studied, having only one published structure of a polymeric compound, $[\text{Co}(\text{phen})(\text{ta})(\text{H}_2\text{O})]$ (phen is 1,10-phenanthroline and ta is terephthalate; Sun *et al.*, 2001). We report here the crystal structure of the title compound, (I).

In (I), the Co atom is surrounded by an O atom, a Cl atom and two N atoms from a phenanthroline heterocycle in a distorted square-planar arrangement (Fig. 1). Atoms Cl1, O1, N1 and N2 form the basal plane, with a mean deviation of 0.0023 \AA . The benzene ring of the terephthalate is roughly perpendicular to the plane of the 1,10-phenanthroline heterocycle, the dihedral angle being $105.60(2)^\circ$. The terephthalate dianion, which acts as a bridge between the two Co atoms, lies on an inversion centre. The Co1—O1 bond distance [$1.917(5)\text{ \AA}$] is the shortest for reported terephthalate-bridged cobalt(II) complexes (Cano *et al.*, 1997; Kurmoo *et al.*, 2001; Sun *et al.*, 2001). The Co \cdots Co distance [$10.94(7)\text{ \AA}$]

**Figure 2**

The crystal packing of (I), viewed down the *a* axis.

through the bridging terephthalate dianion is shorter than those for the reported terephthalate-bridged cobalt(II) complexes (Cano *et al.*, 1997; Sun *et al.*, 2001). Moreover, the 1,10-phenanthroline heterocycles of adjacent molecules are partially overlapped (Fig. 2), separated by 3.674 (3) Å, which suggests the existence of π - π stacking interactions.

Experimental

A solution (10 ml) of dimethylformamide containing $\text{CoCl}_2 \cdot 6\text{H}_2\text{O}$ (0.25 mmol, 0.119 g), $\text{Cu}_2\text{Cl}_2 \cdot 2\text{H}_2\text{O}$ (0.5 mol, 0.085 g) and terephthalic acid (0.5 mmol, 0.083 g) was added slowly to a solution (10 ml) of dimethylformamide containing 1,10-phenanthroline (0.5 mmol, 0.099 g). The mixture was stirred for 30 min and left to stand at room temperature for about a month, after which time violet crystals were obtained.

Crystal data

$M_r = 713.28$

Monoclinic, $P2_1/n$

$a = 7.5020$ (4) Å

$b = 14.6261$ (7) Å

$c = 12.4567$ (6) Å

$\beta = 96.295$ (2)°

$V = 1358.57$ (12) Å³

$Z = 2$
