pyrrolidin-2-one

In the title compound, $\text{C}_9\text{H}_{17}\text{NO}_3$, the pyrrolidine ring is almost planar, in contrast with the classical envelope conformation observed in other pyrrolidine-containing derivatives. The enantiomers are joined into a centrosymmetric dimer by complementary intermolecular $\text{O}-\text{H}\cdots\text{O}$ hydrogen bonds between the hydroxyl and carbonyl groups.

Comment

Pyrrolidone derivatives are important pharmaceutical agents (Sasaki *et al.*, 1988). Some pyrrolidone derivatives serve as potential inhibitors of prostate cancer cell growth (Qiao *et al.*, 2001) and also as potent inhibitors of HIV-1 protease (Kazmierski *et al.*, 2002). Some derivatives, such as 5-alkoxyl-2-pyrrolidones, have been used as perfumes, cosmetics and food additives. In order to study the properties of these compounds, we have synthesized several new pyrrolidone derivatives by photolysis of succinimides, and we present here the crystal structure of one of them, the title compound, (I).

Due to conjugation between atom N1 and the $\text{C1}=\text{O1}$ bond, the pyrrolidine ring of (I) is almost planar, with a mean deviation from the plane of $0.0144(3)\text{ \AA}$ (Fig. 1), which is in contrast with the classical envelope conformation observed in other pyrrolidine-containing derivatives (Thamotharan *et al.*, 2003; Zheng & Li, 2003). Atoms C7, O2, C4, C5 and O3 form a zigzag chain.

In the crystal structure of (I), strong intermolecular hydrogen bonds [$\text{O}\cdots\text{O}$ $2.732(3)\text{ \AA}$ and $\text{O}-\text{H}\cdots\text{O}$ $174(3)^\circ$] between the hydroxyl and carbonyl groups link the enantiomers of (I) into a centrosymmetric dimer (Fig. 2).

Experimental

The title compound was prepared by the photolysis of *N*-methylsuccinimide in ethanol. A solution of 1.0 g of *N*-methylsuccinimide in 100 ml ethanol was irradiated under a 254 nm low-pressure mercury lamp for 17 h, and then concentrated. The product was isolated by column chromatography. Single crystals of (I) suitable for X-ray analysis were grown from a solution in ethyl acetate (m.p. $393-395\text{ K}$). Spectroscopic analysis: IR (KBr, ν , cm^{-1}): (1677, s, $\text{C}=\text{O}$),
