The title complex, $[La(C_6H_4NO_2)(H_2O)_7](C_{10}H_6O_6S_2)$, consists of heptaaqua(isonicotinate)lanthanum(III) cations and 1,5-naphthalenedisulfonate dianions. The La^{III} atom is nine-coordinate, involving two carboxyl O atoms from one isonicotinate group and seven water molecules. The cations and anions are linked by O—H···O and N—H···O hydrogen bonds, generating a three-dimensional supramolecular framework.

Comment**Key indicators**

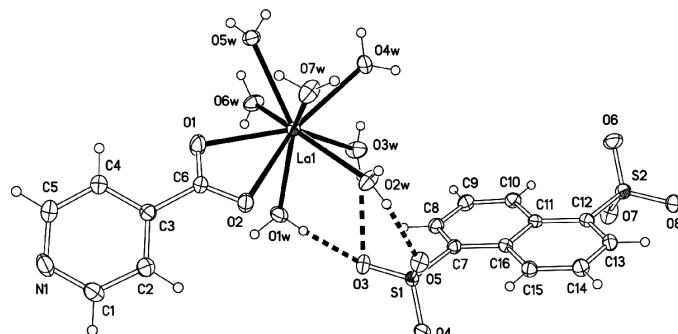

Single-crystal X-ray study
 $T = 295\text{ K}$
Mean $\sigma(C-C) = 0.007\text{ \AA}$
 R factor = 0.038
 wR factor = 0.125
Data-to-parameter ratio = 15.0

For details of how these key indicators were automatically derived from the article, see <http://journals.iucr.org/e>.

The study of the supramolecular chemistry of organosulfonates has received growing attention in recent years (Côté & Shimizu, 2003). The sulfonate groups are generally incorporated into inorganic–organic networks and are engaged in hydrogen-bond interactions. 1,5-Naphthalenedisulfonic acid (H₂NDS), with its rigid structure and two functionally active SO₃ groups in two well separated positions, can exhibit versatile binding modes and also form regular hydrogen bonds (Cai, 2004). To the best of our knowledge, only four metal complexes, $[M(H_2O)_6](1,5\text{-NDS})$ ($M = Mg$, Co, Cu and Ni) have been reported, in which the metal ions are coordinated by six water molecules, while the sulfonate dianions serve as hydrogen-bond acceptors (An *et al.*, 2004; Cai *et al.*, 2001; Chen *et al.*, 2002; Cai, 2004). However, there is little structural information about La^{III} complexes with 1,5-naphthalenedisulfonate. A search of the Cambridge Structural Database (Version of 2002; Allen, 2002) reveals one complex with this ligand, namely La(OH)(1,5-NDS)(H₂O), in which the La^{III} atoms are eight-coordinate and bridged by 1,5-naphthalenedisulfonate ligands, forming a layer structure (Snejko *et al.*, 2002). In the present work, a new La^{III} complex, *viz.* $[La(isonicotinate)(H_2O)_7](1,5\text{-NDS})$, (I), has been obtained from the self-assembly reaction of La(NO₃)₃·6H₂O, isonicotinic acid and sodium 1,5-naphthalenedisulfonate. Its crystal structure is reported here.

As shown in Fig. 1, the asymmetric unit of (I) consists of an $[La(isonicotinate)(H_2O)_7]^{2+}$ cation and a 1,5-naphthalenedisulfonate dianion. In the cation, the La^{III} atom is nine-

coordinate, involving two carboxyl O atoms from one bidentate chelate isonicotinate group and seven water molecules. The cation interacts with the 1,5-naphthalenedisulfonate dianion *via* hydrogen bonds (Table 1). The structure can be envisaged as one in which layers of anions alternate with layers of cations, the layers being linked *via* extensive intermolecular hydrogen bonds, giving rise to a three-dimensional network (Fig. 2 and Table 2).

Experimental

The title complex was prepared by the addition of an aqueous solution (10 ml) of $\text{La}(\text{NO}_3)_3 \cdot 6\text{H}_2\text{O}$ (4.33 g, 10 mmol) to an aqueous solution (20 ml) of sodium 1,5-naphthalenedisulfonate (3.32 g, 20 mmol) and isonicotinic acid (1.11 g, 10 mmol). Colorless prismatic single crystals were obtained from the filtrate at room temperature after several days. Analysis calculated for $\text{C}_{16}\text{H}_{24}\text{LaNO}_{15}\text{S}_2$: C 28.54, H 3.59, N 2.08%; found: C 28.57, H 3.55, N 2.11%.

Symmetry codes: (i) $2-x, 1-y, 1-z$; (ii) $\frac{1}{2}+x, \frac{3}{2}-y, \frac{1}{2}+z$; (iii) $x-1, y, z$; (iv) $x-\frac{1}{2}, \frac{3}{2}-y, \frac{1}{2}+z$; (v) $\frac{3}{2}-x, \frac{1}{2}+y, \frac{3}{2}-z$; (vi) $1-x, 1-y, 1-z$; (vii) $\frac{3}{2}-x, y-\frac{1}{2}, \frac{3}{2}-z$.

C-bound H atoms were placed in calculated positions, with C—H = 0.93 \AA and $U_{\text{iso}}(\text{H}) = 1.2U_{\text{eq}}(\text{C})$, and were refined in the riding-model approximation. The H atoms of the aqua ligands were located in a difference map and refined with O—H and H···H distance restraints of 0.85 (1) and 1.39 (1) \AA , respectively, and with $U_{\text{iso}}(\text{H}) = 1.5U_{\text{eq}}(\text{O})$. The final difference Fourier map had a large peak at about 1 \AA from La1.
