Key indicators

Single-crystal X-ray study
 $T = 296$ K
Mean $\sigma(\text{C}-\text{C}) = 0.003$ Å
 R factor = 0.042
 wR factor = 0.113
Data-to-parameter ratio = 14.1For details of how these key indicators were automatically derived from the article, see <http://journals.iucr.org/e>.

6-Nitro-1-(2-phenylethyl)-1H-benzimidazole

The title compound, $\text{C}_{15}\text{H}_{13}\text{N}_3\text{O}_2$, was synthesized from 5-nitrobenzimidazole, 2-bromoethylbenzene and KOH in ethanol. The phenyl and benzimidazole ring systems are each planar and make a dihedral angle of $43.9(1)^\circ$. The crystal structure is stabilized by weak intermolecular $\text{C}-\text{H}\cdots\text{N}$ hydrogen-bond interactions.

Comment

In recent years, considerable attention has been given to the synthesis of nitrobenzimidazole compounds because of their pharmacological properties (Sarlauskas *et al.*, 1997). We have synthesized and investigated the crystal structures of some benzimidazole and nitrobenzimidazole derivatives (Akkurt *et al.*, 2005). We now report the synthesis of a biologically interesting nitrobenzimidazole compound, its crystal structure and a comparison of the results with our previous studies related to heterocycles (Akkurt, Öztürk, Küçükbay *et al.*, 2004; Akkurt, Öztürk, Şireci *et al.*, 2004).

A molecular view of (I) is shown in Fig. 1. The geometric parameters agree with those previously reported (Akkurt, Öztürk, Küçükbay *et al.*, 2004; Akkurt, Öztürk, Şireci *et al.*, 2004; Akkurt *et al.*, 2005). The conformation of the phenyl ring with respect to the benzimidazole ring is described by the $\text{N}2-\text{C}8-\text{C}9-\text{C}10$ torsion angle of $-60.6(2)^\circ$. The dihedral angle between the planes of the phenyl and benzimidazole ring systems is $43.9(1)^\circ$. Weak $\text{C}-\text{H}\cdots\text{N}$ interactions generate a chain parallel to the a axis (Table 1 and Fig. 2).

Experimental

5-Nitrobenzimidazole (2.0 g, 12.26 mmol) and 2-bromoethylbenzene (1.7 ml, 12.27 mmol) were added to a solution of KOH (1.02 g, 18.39 mmol) in ethanol (25 ml) and the mixture was refluxed for 5 h. The precipitated KBr was then filtered off while the solution was still hot. The solution was cooled to room temperature, and the crude product was precipitated and then crystallized from ethanol (10 ml) (yield 2.58 g, 79%; m.p. 409–410 K). ^1H NMR (CDCl_3): δ 3.2 (*t*, NCH_2CH_2 , 2H), 4.5 (*t*, $\text{N}-\text{CH}_2\text{CH}_2$, 2H), 7.0–8.3 (*m*, Ar-H, 8H), 8.7 (*s*, benzimidazole-C2-H, 1H). Analysis calculated for $\text{C}_{15}\text{H}_{13}\text{N}_3\text{O}_2$: C 67.42, H 4.85, N 15.73%; found: C 67.25, H 4.83, N 15.67%.

Figure 1

An ORTEP-3 (Farrugia, 1997) drawing of (I), with the atom-numbering scheme. Displacement ellipsoids for non-H atoms are drawn at the 50% probability level.
