Key indicators

Single-crystal X-ray study

$T = 100\text{ K}$

Mean $\sigma(\text{C}-\text{C}) = 0.003\text{ \AA}$

R factor = 0.037

wR factor = 0.100

Data-to-parameter ratio = 16.5

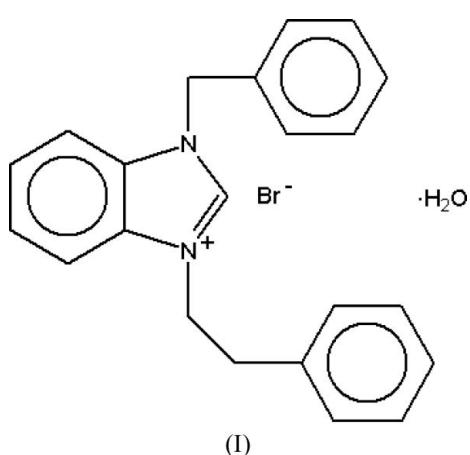

For details of how these key indicators were automatically derived from the article, see <http://journals.iucr.org/e>.

The title compound, $\text{C}_{22}\text{H}_{20}\text{N}_2^+\text{Br}^-\cdot\text{H}_2\text{O}$, was synthesized from 1-benzylbenzimidazole and 2-bromoethylbenzene in dimethylformamide. The dihedral angle between the two phenyl rings is $70.6(1)^\circ$. These phenyl rings make dihedral angles of $52.99(9)$ and $83.03(8)^\circ$ with the benzimidazole ring system. The crystal structure is stabilized by intermolecular $\text{C}-\text{H}\cdots\text{Br}$ and $\text{O}-\text{H}\cdots\text{Br}$ hydrogen-bond interactions.

Comment

Considerable attention has been given to the synthesis of benzimidazole derivatives because of their therapeutic properties in many diseases. For example, omeprazole, which contains benzimidazole and pyridine, is the best selling anti-ulcer drug nowadays (Carlsson *et al.*, 2002). The aforementioned compounds show versatile pharmacological activities, such as antibacterial, antifungal, antihelminthic, anti-allergic, antineoplastic, local analgesic, antihistaminic, vasodilative, hypotensive and spasmolytic activities (Easmon *et al.*, 2001; Güneş & Coşar, 1992; Küçükbay *et al.*, 2004). We have also synthesized and investigated the crystal structures of some benzimidazole derivatives (Akkurt *et al.*, 2004, 2005; Türk-tekin *et al.*, 2004; Karaca *et al.*, 2005). The object of the present study was to elucidate the crystal structure of the title compound, (I).

The molecular structure of (I) is shown in Fig. 1. The bond lengths and angles (Table 1) are comparable with those of similar structures previously reported (Öztürk Yıldırım *et al.*, 2005, Akkurt *et al.*, 2004; Karaca *et al.*, 2005). The benzimidazole ring system is essentially planar, with a maximum deviation of $0.023(2)\text{ \AA}$ for atom N1. The two phenyl rings, C9–C14 and C17–C22, make dihedral angles of $83.03(8)$ and $52.99(9)^\circ$, respectively, with the benzimidazole ring system.

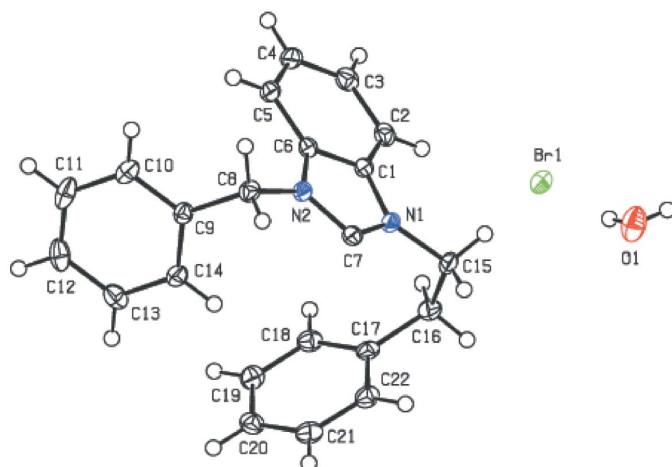

Figure 1
View of (I) with the atom-numbering scheme. Displacement ellipsoids are drawn at the 50% probability level.

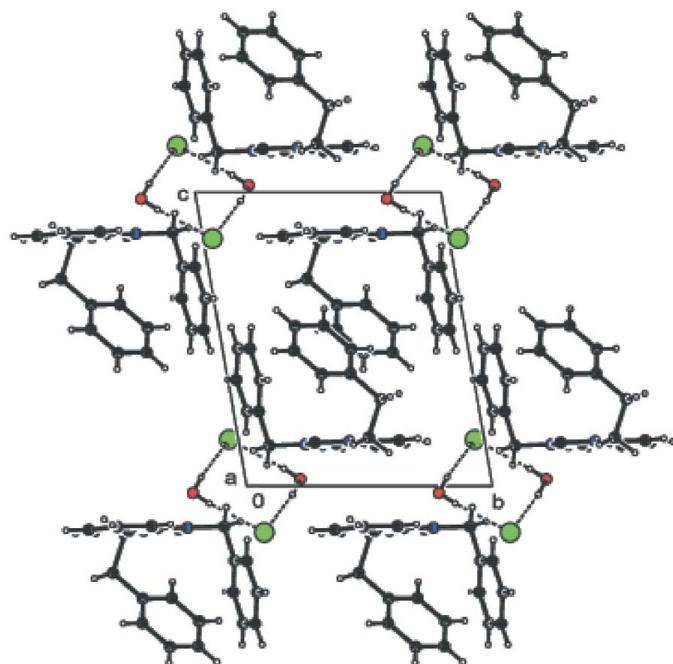

Figure 2
A view of the crystal packing along the a axis. Dashed lines indicate $\text{O}-\text{H}\cdots\text{Br}$ hydrogen bonds.

The dihedral angle between these phenyl rings is $70.6(1)^\circ$. The crystal packing (Fig. 2) is stabilized by intermolecular $\text{C}-\text{H}\cdots\text{Br}$ and $\text{O}-\text{H}\cdots\text{Br}$ hydrogen bonds (Table 2).

Experimental

1-Benzylbenzimidazole (2.0 g, 9.62 mmol) and 2-bromoethylbenzene (1.3 ml, 9.62 mmol) in dimethylformamide (DMF, 3 ml) were heated for 3 h. All the volatiles were then removed under vacuum. The title compound was crystallized from EtOH-Et₂O (3:1 *v/v*) (yield: 3.28 g, 83%; m.p. 435–436 K). ¹H NMR (DMSO-*d*₆): δ 3.29 (*t*, NCH₂CH₂Ph, 2H), 4.84 (*t*, N—CH₂CH₂Ph, 2H), 5.77 (*s*, CH₂Ph, 2H), 7.22–8.13 (*m*, Ar—H, 14H), 9.99 (*s*, benzimidazole-C²—H, 1H). ¹³C NMR (DMSO-*d*₆): δ 34.77, 48.50, 50.14, 114.32, 127.12, 127.17, 128.51, 129.06, 129.26, 129.41, 131.06, 131.60, 134.42, 137.27, 142.79. Analysis calculated for

$\text{C}_{22}\text{H}_{23}\text{BrN}_2\text{O}$: C 64.23, H 5.59, N 6.81%; found: C 63.88, H 5.69, N 6.38%.

Symmetry codes: (i) $-x, -y, -z + 2$; (ii) $-x, -y + 1, -z + 2$.

The water molecule H atoms were found in difference Fourier maps and refined freely. The other H atoms were positioned geometrically and refined using a riding model, with C—H = 0.93–0.97 Å, and with $U_{\text{iso}} = 1.2U_{\text{eq}}$ (parent atom). The highest residual peak and the deepest hole are located 0.89 and 0.90 Å, respectively, from atom Br1.

Data collection: *X-AREA* (Stoe & Cie, 2002); cell refinement: *X-AREA*; data reduction: *X-RED32* (Stoe & Cie, 2002); program(s) used to solve structure: *SHELXS97* (Sheldrick, 1997); program(s) used to refine structure: *SHELXL97* (Sheldrick, 1997); molecular graphics: *ORTEP3* for Windows (Farrugia, 1997); software used to prepare material for publication: *WinGX* (Farrugia, 1999).

The authors acknowledge the Faculty of Arts and Sciences, Ondokuz Mayıs University, Turkey, for the use of the Stoe IPDS-II diffractometer (purchased under grant F.279 of the University Research Fund). HK and EO thank İnönü University Scientific Research Unit (BAPB-2005/36) for financial support for this study.
