## 10-(3-Acetamidobenzylidene)anthrone

The title compound, $\mathrm{C}_{23} \mathrm{H}_{17} \mathrm{NO}_{2}$, was prepared by reacting 10-(3-aminobenzylidene)anthrone and acetic anhydride in the presence of pyridine. X-ray crystal structure analysis shows that the three rings of the anthraquinone system are not coplanar because of steric interactions with the benzylidene group.

## Comment

It was reported recently that some 10 -substituted benzylideneanthrones possess high antitumour activity (Paull et al., 1992). In our laboratory, some 10 -substituted benzylideneanthrones have been prepared and evaluated for antitumour activity. Our study of the structure-activity relationship (SAR) showed that substitution in the phenyl ring of the molecule affects its antitumour activity (Hu \& Zhou, 2004). As a continuation of our research work on SARs, we prepared crystals of the title molecule, (I), and investigated its structure.

(I)

The molecular structure of (I) is illustrated in Fig. 1. Selected bond lengths and angles are listed in Table 1. As illustrated in Fig. 1, the three rings of the anthraquinone system are not coplanar, because of steric interactions with the benzylidene group; the two outer benzene rings form a dihedral angle of $23.0(1)^{\circ}$. In the central six-membered ring, atoms C11, C12, C13 and C14 are coplanar to within 0.009 (2) $\AA$, with atoms C5 and C10 deviating from the plane by 0.125 (5) and 0.246 (5) $\AA$, respectively, and the ring adopts an asymmetric boat conformation.

## Experimental

10-(3-Aminobenzylidene)anthrone was prepared according to the literature method of Ingram (1950). A mixture of 10-(3-aminobenzylidene) anthrone ( 0.6 g ), acetic anhydride ( 20 ml ) and pyridine

Received 19 August 2005
Accepted 5 September 2005 Online 14 September 2005
$(0.5 \mathrm{ml})$ was added to a 100 ml flask and then stirred. The reaction was continued for 1.5 h at room temperature, followed by filtration and washing with ethanol. The crude product was collected and recrystallized from ethanol to afford yellow crystals of (I) ( 0.4 g , yield $59.0 \%$, m.p. $462-465 \mathrm{~K})$. Spectroscopic analysis: IR ( $\mathrm{KBr}, \mathrm{v}, \mathrm{cm}^{-1}$ ): 3319, 1687, 1645, 1602, 1544, 1483, 1417, 1372, 1319, 1277, 932, 776, 683 ; ${ }^{1} \mathrm{H}$ NMR ( $\mathrm{CDCl}_{3}$, $\delta$, p.p.m.): $7.52(\mathrm{~s}, 1 \mathrm{H}, \mathrm{C}=\mathrm{CH}), 7.00-8.28(\mathrm{~m}$, 12 H ), 2.18 ( $s, 3 \mathrm{H},-\mathrm{CH}_{3}$ ). MS (\%): 340 ( $M+1,10$ ), 339 ( $M, 22$ ), 297 (11), 296 (32), 281 (17), 280 (47), 239 (10), 43 (100).
