4-Nitrophenol–urea (1/1)

In the title compound, $C_6H_5NO_3 \cdot CH_4N_2O$, 4-nitrophenol molecules are linked to urea molecules by $O-H \cdots O$ and $N-H \cdots O$ hydrogen bonds, forming a network structure.

Comment

In the design of crystal structures, the assembly of molecular units in predefined arrangements is a key goal (Desiraju, 1995, 1997; Braga *et al.*, 1998). Directional intermolecular interactions are the primary tools in achieving this goal and hydrogen bonding is currently the best among them (Zaworotko, 1997; Braga & Grepioni, 2000).

The title compound, (I), forms a co-crystal (Fig. 1 and Table 1) in which 4-nitrophenol and urea molecules interact through multiple hydrogen bonds (Table 2) generating a three-dimensional network (Fig. 2).

Experimental

Urea (0.12 g, 2 mmol) and 4-nitrophenol (0.28 g, 2 mmol) were dissolved in dimethylformamide (10 ml). The reaction mixture was filtered. Colorless prism-shaped crystals separated from the filtrate after about a month.

O3–H3 ⁱⁱ ···O4 ⁱⁱⁱ	0.82	1.79	2.613 (3)	177

Symmetry codes: (i) $x, y, z + 1$; (ii) $-x + 2, -y, -z + 1$; (iii) $x - 1, y, z$.

Figure 2

View parallel to the a axis of (I), showing hydrogen bonds as dashed lines.

The presence of two peaks in the difference Fourier map in two suitable locations showed atoms N2 and N3 to be protonated, and the H atoms attached to N2 and N3 were included in the refinement in the riding-model approximation (N–H = 0.86 Å), with $U_{\text{iso}}(\text{H}) = 1.2U_{\text{eq}}(\text{N})$. The other H atoms were positioned geometrically and allowed to ride on their parent atoms at distances of 0.82 (O–H) and 0.93 Å (C–H), and $U_{\text{iso}}(\text{H}) = 1.2U_{\text{eq}}(\text{parent atom})$.

Data collection: SMART (Bruker, 2002); cell refinement: SAINT (Bruker, 2002); data reduction: SAINT; program(s) used to solve structure: SHELXS97 (Sheldrick, 1997); program(s) used to refine structure: SHELXL97 (Sheldrick, 1997); molecular graphics: ORTEPII (Johnson, 1976); software used to prepare material for publication: SHELXL97.
