## Diethyl 4,7-dimethoxyindan-2,2-dicarboxylate

The title compound,  $\text{C}_{17}\text{H}_{22}\text{O}_6$ , crystallizes with two independent molecules in the asymmetric unit. The bond lengths and angles are generally within the normal ranges. The crystal packing is stabilized by weak intermolecular  $\text{C}-\text{H}\cdots\text{O}$  hydrogen bonds and weak  $\text{C}-\text{H}\cdots\pi(\text{arene})$  interactions.

## Comment

The title compound, (I), was prepared for use as a building block in the syntheses of single-walled carbon nanotube (SWNT) interacting compounds. It crystallizes in the monoclinic space group  $P2_1/c$  with two independent molecules in the asymmetric unit (Fig. 1). The corresponding bond lengths and angles of the two molecules agree with each other, but the molecules differ in the orientation of an ester group (Table 1). In both molecules, the methoxy groups are almost coplanar with the benzene ring and the five-membered rings of the indane ring system adopt envelope conformations. The crystal packing of (I) is stabilized mainly by weak intermolecular  $\text{C}-\text{H}\cdots\text{O}$  hydrogen bonds and weak  $\text{C}-\text{H}\cdots\pi(\text{arene})$  interactions (Table 2 and Fig. 2). In Table 2,  $Cg1$  and  $Cg2$  denote the centroids of rings  $\text{C}1\text{A}-\text{C}6\text{A}$  and  $\text{C}1\text{B}-\text{C}6\text{B}$ , respectively.

## Experimental

Diethyl 5-bromo-4,7-dimethoxyindan-2,2-dicarboxylate (10 g, 24.9 mmol), prepared as described by Hammershøj & Christensen (2005), was dissolved in methanol (300 ml) and Pd/C 10% (cat. amount) was added. The mixture was hydrogenated (5.8 p.s.i.) at room temperature for 20 h. The reaction mixture was filtered and evaporated to dryness *in vacuo*, yielding an off-white solid. Purification by crystallization from ethanol yielded compound (I) as a white powder (yield 63%, m.p. 362–364 K). Single crystals were obtained by slow evaporation from ethanol  $^1\text{H}$  NMR (300 MHz,  $\text{CDCl}_3$ ):  $\delta$  6.7 (2H, s), 4.2 (4H, q,  $J = 7.3$  Hz), 3.41 (4H, s), 1.25 (6H, t,  $J = 6.23$  Hz);  $^{13}\text{C}$  NMR (100 MHz,  $\text{CDCl}_3$ ):  $\delta$  171.5, 149.7, 129.5, 109.2, 61.5, 59.7, 55.5, 37.9, 13.9;  $m/e$ : 322 (62), 248 (83.5), 175 (100) and 161
