## Key indicators

Single-crystal X-ray study
$T=298 \mathrm{~K}$
Mean $\sigma(\mathrm{C}-\mathrm{C})=0.002 \AA$
$R$ factor $=0.042$
$w R$ factor $=0.116$
Data-to-parameter ratio $=17.1$
For details of how these key indicators were automatically derived from the article, see http://journals.iucr.org/e.

## 10-(4-Methoxyphenyl)-3,7-dimethyl-1H,9H,10H-dipyrano[3,4-e:4', $\left.3^{\prime}-b\right]$ pyran-1,9-dione

The title compound, $\mathrm{C}_{20} \mathrm{H}_{16} \mathrm{O}_{6}$, was synthesized by the reaction of 4-methoxybenzaldehyde with triacetic acid lactone in ethylene glycol catalyzed by KF-alumina. The pyran ring adopts a boat conformation and the benzene ring is perpendicular to the mean plane through the fused ring system.

## Comment

The utility of fluoride salts as potential bases in a variety of synthetic reactions has been recognized in recent years (Ando \& Yamawaki, 1981; Clark, 1980). The condensation reaction of carbonyl compounds with active methylene compounds is one of the most important synthetic methods leading to substituted alkenes (Yamawaki et al., 1983). In our earlier paper (Wang et al., 2003), we have reported that alumina coated with potassium fluoride is a versatile solid-supported reagent for the Knoevenagel reaction and Michael addition condensation. In the present paper, we report the crystal structure of the title compound, (I).

(I)

In (I), the pyranone rings are each essentially planar. The pyran ring adopts a boat conformation, with atoms O1 and C6 deviating from the $\mathrm{C} 5 / \mathrm{C} 1 / \mathrm{C} 7 / \mathrm{C} 11$ plane by 0.076 (3) and 0.183 (3) A , respectively (Fig. 1). The methoxy group is almost coplanar with the benzene ring, with a $\mathrm{C} 20-\mathrm{O} 6-\mathrm{C} 17-\mathrm{C} 16$ torsion angle of $8.8(3)^{\circ}$. The C14-C19 benzene ring is perpendicular to the $\mathrm{C} 5 / \mathrm{C} 1 / \mathrm{C} 7 / \mathrm{C} 11$ plane [dihedral angle $\left.89.14(7)^{\circ}\right]$.

## Experimental

Compound (I) was prepared by the reaction of 4-methoxybenzaldehyde ( 1 mmol ) with triacetic acid lactone ( 2 mmol ) in ethylene glycol catalyzed by KF-alumina. Single crystals of (I)
