## Key indicators

Single-crystal X-ray study

T = 293 K

Mean  $\sigma(\text{C}-\text{C}) = 0.007 \text{ \AA}$ 

R factor = 0.049

wR factor = 0.084

Data-to-parameter ratio = 22.3

For details of how these key indicators were  
automatically derived from the article, see  
<http://journals.iucr.org/e>.Tetraethylammonium dichlorotris(2,6-dimethyl-  
phenylsulfanyl- $\kappa$ S)ruthenium dichloromethane  
solvate

The title mononuclear ruthenium(IV) complex,  $(\text{C}_8\text{H}_{20}\text{N})[\text{Ru}(\text{C}_8\text{H}_9\text{S})_3\text{Cl}_2]\cdot\text{CH}_2\text{Cl}_2$ , contains the trigonal  $\{\text{Ru}(\text{Sxylyl})_3\}$  core (xylyl is 2,6-dimethylphenyl), with S–Ru–S angles in the range 118.07 (6)–123.45 (6)°. The coordination geometry of the central Ru atom is trigonal–bipyramidal, with two Cl atoms in the axial positions. The Ru–S and Ru–Cl bond lengths are 2.1918 (18)–2.2046 (19) and 2.378 (2)–2.385 (2) Å, respectively.

## Comment

There has been continuing interest in the reactivity of coordinatively unsaturated ruthenium thiolate complexes as models for the active sites of heterogeneous catalysts (Topsoe & Clausen, 1984; Chianelli, 1984). While ruthenium(II) thiolate complexes are well documented, the ruthenium(IV) system has received rather less attention (Torrens, 2000). Ruthenium(IV) complexes that contain the characteristic trigonal–planar  $\{\text{Ru}(\text{SAr})_3\}^+$  core have been prepared from the reaction of ruthenium(IV) starting materials such as  $[\text{Et}_4\text{N}][\text{RuCl}_5(\text{CH}_3\text{CN})]$  or  $\text{K}_2\text{Ru}(\text{NO})\text{Cl}_5$  with a series of aromatic thiolate anions that are substituted in the 2- and 6-positions with methyl or isopropyl groups (Koch & Millar, 1983; Millar *et al.*, 1985; Soong *et al.*, 1988). Interestingly, complexes  $[\text{Ru}^{\text{IV}}(\text{SAr})_4(L)]$  (Ar = 2,3,5,6-tetramethylphenyl, 2,6-dimethylphenyl and 2,4,6-triisopropylphenyl; L = MeOH, MeCN and dimethyl sulfoxide) show unusual reactivity patterns that are dependent on the steric nature of the thiolate ligands (Soong *et al.*, 1988). For example,  $[\text{Ru}(\text{SAr})_4(\text{MeCN})]$  reacts with CO to give a carbonyl complex  $[\text{Ru}(\text{SAr})_4(\text{CO})]$  (Koch & Millar, 1983). A similar complex,  $[\text{Ru}(\text{SAr})_4(\text{NO})]$ , containing an  $[\text{RuNO}]$  centre may be obtained from the reaction of  $[\text{Et}_4\text{N}][\text{RuCl}_5(\text{CH}_3\text{CN})]$  with  $\text{Li}(\text{S}-2,4,6\text{-}^i\text{Pr}_3\text{C}_6\text{H}_2)$ , as the  $[\text{RuNO}]$  coordination mode has been noted for its ability to persist during substitution and oxidation–reduction reactions (Soong *et al.*, 1988).  $\sigma$ -Acetylide complexes of ruthenium(IV) thiolates  $[\text{Et}_3\text{NH}][\text{Ru}(\text{SAr})_3(\text{C}\equiv\text{CPh})\text{Cl}]$  (Ar = 2,6-Me<sub>2</sub>C<sub>6</sub>H<sub>4</sub>) have been synthesized from  $[\text{Ru}(\text{SAr})_3(\text{MeCN})\text{Cl}]$  and  $\text{PhC}\equiv\text{CH}$  in the presence of Et<sub>3</sub>N as a base (Zhang *et al.*, 2002). In our research into the preparation of ruthenium complexes with sulfur and selenium donor ligands (Zhang *et al.*, 2001), we have synthesized high-valence ruthenium complexes with sterically bulky thiolate ligands (Zhang *et al.*, 2002) and have attempted to establish the structure of these complexes. In this paper, we report the structure of a ruthenium(IV) complex of a thiolate, *viz.* the title compound,  $[\text{Et}_4\text{N}][\text{Ru}(\text{Sxylyl})_3\text{Cl}_2]\cdot\text{CH}_2\text{Cl}_2$ , (I) (xylyl = 2,6-dimethylphenyl).

The structure of (I) consists of discrete  $[\text{Et}_4\text{N}]^+$  cations,  $[\text{Ru}(\text{Sxylyl})_3\text{Cl}_2]^-$  anions and dichloromethane solvent molecules. The coordination geometry of the central Ru atom in the anion is trigonal-bipyramidal, with two Cl atoms occupying the *trans* axial positions. The three S atoms and the Ru atom are coplanar, with an average deviation of 0.0315 Å from the least-squares plane. The two Ru–Cl bonds are almost perpendicular to the  $\text{RuS}_3$  plane, with an average angle of  $95.5^\circ$ . The S–Ru–S bond angles range from 118.07 (6) to  $123.45 (6)^\circ$ . The Ru–S bond lengths in (I) (Table 1) are comparable with those in  $[\text{Ru}(\text{Sxylyl})_3(\text{MeCN})\text{Cl}]$  (Zhang *et al.*, 2002) and  $[\text{Et}_3\text{NH}][\text{Ru}(\text{Sxylyl})_3(\text{C}\equiv\text{CPh})\text{Cl}]$  (Zhang *et al.*, 2002). The *trans* Cl atoms and the central Ru atom are almost collinear, with a Cl1–Ru1–Cl2 angle of  $178.33 (5)^\circ$ . The two Ru–Cl bond distances are slightly shorter than those in the ruthenium(II)–sulfur complex  $[(\eta^6\text{-}p\text{-cymene})\text{RuCl}(\text{S}_2\text{CNMe}_2)]$  [2.4276 (5) Å; Yao *et al.*, 2003] and in the ruthenium(IV)–thiolate complex  $[\text{Ru}(\text{Sxylyl})_3(\text{MeCN})\text{Cl}]$  [2.437 (1) Å; Zhang *et al.*, 2002].

## Experimental

Black crystals of the title complex were obtained as a by-product (ca 5% yield) from the reaction of  $[\text{Et}_4\text{N}][\text{RuCl}_5(\text{MeCN})]$  and sodium 2,6-dimethylthiophenol in a mixed methanol–acetonitrile (2:1) solvent, as described in our earlier report (Zhang *et al.*, 2002). The title complex was also synthesized from the reaction of  $[\text{Ru}(\text{Sxylyl})_3(\text{MeCN})\text{Cl}]$  and  $[\text{Et}_4\text{N}]\text{-Cl}$  in 1:1 ratio in a tetrahydrofuran solution, according to the literature method of Satsangee *et al.* (2000).  $^1\text{H NMR}$  ( $\text{CDCl}_3$ ,  $\delta$ , p.p.m.): 7.33 (*t*, 1H,  $\text{H}_p$ ), 7.20 (*t*, 2H,  $\text{H}_p$ ), 7.09 (*d*, 2H,  $\text{H}_m$ ), 7.02 (*d*, 4H,  $\text{H}_m$ ), 3.31 (*dt*, 8H,  $\text{CH}_3\text{CH}_2$ ), 2.34 (*s*, 12H, Me), 2.22 (*s*, 6H, Me), 1.32 (*t*, 12H,  $\text{CH}_3\text{CH}_2$ ). MS (FAB):  $m/z$  583 ( $M^+ - [\text{Et}_4\text{N}] + 1$ ), 512 ( $M^+ - [\text{Et}_4\text{N}] - 2\text{Cl}$ ). Analysis calculated for  $\text{C}_{32}\text{H}_{47}\text{Cl}_2\text{NRuS}_3 \cdot \text{CH}_2\text{Cl}_2$ : C 50.1, H 6.20, N 1.77%; found: C 50.8, H 6.13, N 1.74%.
