## 2-(4-Methoxyphenoxy)-1,9-diphenyl-1,9-dihydropurin-6-one

The title compound, $\mathrm{C}_{24} \mathrm{H}_{18} \mathrm{~N}_{4} \mathrm{O}_{3}$, has a planar bicyclic imidazolo[5,4- $d$ ]pyrimidine core. The planes of the phenyl and methoxyphenoxy substituents form substantial ( $>30^{\circ}$ ) dihedral angles with the imidazolopyrimidine plane. Intermolecular $\mathrm{C}-\mathrm{H} \cdots \mathrm{O}$ interactions link the molecules into infinite chains running along the $a$ axis of the crystal structure.

## Comment

Due to the fundamental role of purines in nucleic acid chemistry and cellular biochemistry, the potential use of purine derivatives as chemotherapeutic agents in the treatment of malignant diseases was investigated as early as the 1930s (Lustig \& Wachtel, 1935). Substituted guanine derivatives may be used as potential biologically active compounds or pharmaceuticals (Xu et al., 1995). In recent years, we have been developing methods for the synthesis of derivatives of heterocycles via the aza-Wittig reaction (Ding et al., 2004). In this context, we have synthesized the title compound, 2-(4-methoxyphenoxy)-1,9-diphenyl-1,9-dihydropurin-6-one, (I); here we report its crystal structure.

(I)

The molecular structure of (I) is shown in Fig. 1. Selected bond lengths and bond and torsion angles are listed in Table 1. The bicyclic imidazolo[5,4-d]pyrimidine system is planar within $0.012 \AA$. The planes of the aromatic rings C2-C7, C9C14 and C19-C24 form dihedral angles of 55.8 (1), 67.9 (1) and $34.2(2)^{\circ}$, respectively, with the least-squares plane of the imidazolopyrimidine system; the $\mathrm{N} 1-\mathrm{C} 8-\mathrm{O} 2-\mathrm{C} 5$ and $\mathrm{C} 8-$ $\mathrm{O} 2-\mathrm{C} 5-\mathrm{C} 6$ torsion angles are $18.8(4)$ and $117.7(3)^{\circ}$, respectively.

Figure 1
View of the molecular structure of the title compound, showing the atomlabeling scheme. Displacement ellipsoids are drawn at the $50 \%$ probability level.

Figure 2

Packing diagram showing the crystal structure of the title compound. The $\mathrm{C}-\mathrm{H} \cdots \mathrm{O}$ interactions are shown as dashed lines. H atoms not involved in hydrogen bonding have been omitted.

Intermolecular $\mathrm{C}-\mathrm{H} \cdots \mathrm{O}$ interactions (Table 2) link the molecules into infinite chains running along the $a$ axis of the crystal structure (Fig. 2).

## Experimental

Ethyl 5-[(phenylimino)methyleneamino]-1-phenylimidazole-4carboxylate ( 2 mmol ), 4-methoxyphenol ( 0.25 g ) and potassium carbonate $(0.1 \mathrm{~g})$ were dissolved in dry acetonitrile ( 30 ml ). The solution was stirred for 4 h at 310 K . The mixture was then filtered and the solvent was removed from the filtrate under reduced pressure. The solid residue was recrystallized from anhydrous ethanol
( 10 ml ) to produce the title compound, (I), in a yield of $83 \%$ (m.p. 470 K ). Suitable crystals were obtained by vapor diffusion of dichloromethane into an ethanol solution at room temperature. MS (EI 70 eV ) $m / z(\%): 410$ (100), 379 (3), 303 (5), 291/287 (94/98), 275 (64), 231 (18), 76 (84). ${ }^{1} \mathrm{H}$ NMR ( $\mathrm{CDCl}_{3}, 400 \mathrm{MHz}$ ): $7.98(s, 1 \mathrm{H}, \mathrm{C}-$ H), 7.51-7.55 ( $m, 5 \mathrm{H}, \mathrm{Ph}-\mathrm{H}$ ), 7.37-7.41 ( $m, 5 \mathrm{H}, \mathrm{Ph}-\mathrm{H}$ ), 6.83-7.05 ( $m, 4 \mathrm{H}, \mathrm{Ph}-\mathrm{H}$ ), $3.79(s, 1 \mathrm{H}, \mathrm{C}-\mathrm{H})$.

Symmetry code: (i) $x-\frac{1}{2},-y+\frac{3}{2},-z+2$.
The H atoms were placed in calculated positions and treated as riding atoms $(\mathrm{C}-\mathrm{H}=0.93-0.98 \AA)$ with $U_{\text {iso }}(\mathrm{H})$ values set at $1.2 U_{\text {eq }}(\mathrm{C})$ for aromatic and $1.5 U_{\text {eq }}(\mathrm{C})$ for methyl H atoms. In the absence of significant anomalous scattering, Friedel pairs were merged.

Data collection: SMART (Bruker, 2001); cell refinement: SAINT (Bruker, 2001); data reduction: SAINT; program(s) used to solve structure: SHELXS97 (Sheldrick, 1997); program(s) used to refine structure: SHELXL97 (Sheldrick, 1997); molecular graphics:

SHELXTL (Sheldrick, 1997); software used to prepare material for publication: SHELXTL.
