Received 20 November 2009; accepted 15 December 2009

A series of 41 papers by H. Zhong *et al.* are retracted.

As a result of problems with the data sets and incorrect atom assignments, 41 papers by H. Zhong *et al.* are retracted. Full details of all the articles are given in Table 1.

Key indicators: single-crystal X-ray study; $T = 273$ K; mean $\sigma(\text{C}-\text{C}) = 0.006$ Å; R factor = 0.022; wR factor = 0.072; data-to-parameter ratio = 12.9.

The Ce^{IV} atom in the title complex, $[\text{Ce}(\text{NO}_3)_4(\text{C}_{11}\text{H}_9\text{N})_2]$, is ten-coordinated by two N atoms of 4-phenylpyridine ligands and eight O atoms of four NO_3^- ligands. The Ce atom lies on a crystallographic twofold rotation axis. The Ce–O bond lengths are in the range 2.466 (2)–2.559 (3) Å. The Ce–N bond length is 2.623 (3) Å. C–H...O hydrogen bonds link the mononuclear complex into a supramolecular network structure.

Comment

Molecular magnetic compounds, such as molecular ferro- and ferrimagnets, organic magnets, single-molecule magnets and high-spin molecules, have recently attracted attention (Miller & Drillon, 2001*a,b*, 2002). Owing to Lanthanide metals unique physical and chemical properties, Lanthanide complexes play an important role in special materials having optical, electronic, magnetic and biological importance (Benelli *et al.*, 1992; Deborah *et al.*, 2000; Farrugia *et al.*, 2000). More importantly, since the removal of lanthanides from radioactive high level liquid waste (HLLW) has been shown to improve the transmutation of long-lived transuranic elements to shortlived or even stable nuclides (Modolo & Odoj, 1998), the coordination chemistry of the 4f metals continues to attract interest. We report herein the crystal structure of the title compound, (I).

In the molecule of (I) (Fig. 1), the ligand bond lengths and angles are within normal ranges (Allen *et al.*, 1987). The irregular ten-coordinate environment of the Ce atom is completed by The two N atoms of 4-phenylpyridine ligands and eight O atoms of four NO₃⁻ (Table 1). The Ce—O bond lengths are in the range 2.466 (2) to 2.559 (3) Å. The Ce—N bond length is 2.623 (3) Å. The C—H···O hydrogen bonds link the mononuclear complex into a supramolecular network structure (Fig. 2).

Experimental

Crystals of the title compound (I) were synthesized using hydrothermal method in a 23 ml Teflon-lined Parr bomb, which was then sealed. Ammonium cerium(IV) nitrate (109.6 mg, 0.2 mmol), 4-phenylpyridine (94.2 mg, 0.6 mmol), and distilled water (5.5 g) were placed into the bomb and sealed. The bomb was then heated under autogenous pressure for 7 d at 393 K and allowed to cool at room temperature for 24 h. Upon opening the bomb, a clear colourless solution was decanted from small colorless crystals. These crystals were washed with distilled water followed by ethanol, and allowed to air-dry at room temperature. Powder X-ray diffraction was conducted on the sample.

Refinement

H atoms were positioned geometrically, with C—H = 0.93 Å for aromatic H and constrained to ride on their parent atoms, with $U_{\text{iso}}(\text{H}) = 1.2U_{\text{eq}}(\text{C})$.

Special details

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

Refinement. Refinement of F^2 against ALL reflections. The weighted R -factor wR and goodness of fit S are based on F^2 , conventional R -factors R are based on F , with F set to zero for negative F^2 . The threshold expression of $F^2 > \sigma(F^2)$ is used only for calculating R -factors(gt) *etc.* and is not relevant to the choice of reflections for refinement. R -factors based on F^2 are statistically about twice as large as those based on F , and R -factors based on ALL data will be even larger.
