Correspondence e-mail: han_jianrong@163.com

Received 16 October 2007; accepted 16 October 2007

Key indicators: single-crystal X-ray study; $T = 294$ K; mean $\sigma(\text{C}-\text{C}) = 0.004$ Å; R factor = 0.044; wR factor = 0.133; data-to-parameter ratio = 13.7.

In the title compound, $\text{C}_{26}\text{H}_{24}\text{ClN}_3\text{O}_5\text{S}\cdot\text{C}_2\text{H}_3\text{N}$, the *o*-vanillin group makes dihedral angles of 25.87 (4), 11.93 (3) and 72.05 (7)° with the pyrazolone, benzene and phenyl rings, respectively. The crystal structure is stabilized by weak intermolecular $\text{C}-\text{H}\cdots\text{O}$ interactions that link molecules into centrosymmetric dimers.

Comment

Schiff-base ligands have received a good deal of attention in biology and chemistry (Kahwa *et al.*, 1986) in areas such as protein and enzyme mimics (Santos *et al.*, 2001). Among the large number of compounds, 4-amino-1,5-dimethyl-2-phenylpyrazol-3-one forms a variety of Schiff bases with aldehydes, and the synthesis and crystal structures of some of them, such as (*E*)-4-[(1,5-Dimethyl-3-oxo-2-phenyl-2,3-dihydro-1*H*-pyrazol-4-ylimino)methyl]-phenyl 4-chlorobenzoate (Han *et al.*, 2007) and (*E*)-4-[4-(4-Chlorobenzoyloxy)benzylideneamino]-1,5-dimethyl-2-phenyl-1*H*-pyrazol-3(2*H*)-one (Hu, 2006) have been reported. We now report the synthesis and molecular structure of the title Schiff base compound, (I), (Fig. 1)

The bond lengths and angles of (I) are within normal ranges (Allen *et al.*, 1987). The pyrazolone ring (C16—C18/N1/N2/N3/O5) is nearly planar, with an r.m.s. deviation for fitted atoms of 0.030 Å. It makes a dihedral angle of 54.45 (9)° with the attached phenyl ring (C21—C26). The *o*-vanillin group (C8—C13/C15/O3/O4) is almost planar, with an r.m.s. deviation for fitted atoms of 0.020 Å. This group makes dihedral angles of 25.87 (4)°, 11.93 (3)° and 72.05 (7)°, with the the pyrazolone ring (C16—C18/N1/N2/N3/O5), the terminal C1—C6 benzene ring and the terminal C21—C26 phenyl ring, respectively.

The crystal packing is stabilized by weak intermolecular C10—H10...O2=S1 interaction (Table 1, Fig. 2) that form inversion dimers.

Experimental

An anhydrous ethanol solution (50 ml) of 4-chloro-2-formyl-6-methoxyphenyl 4-methylbenzenesulfonate (3.41 g, 10 mmol) was added to an anhydrous ethanol solution (50 ml) of 4-amino-1,5-dimethyl-2-phenylpyrazol-3-one (2.03 g, 10 mmol) and the mixture stirred at 350 K for 3 h under N₂, giving a yellow precipitate. The product was isolated, recrystallized from acetonitrile, and then dried in a vacuum to give pure compound (I) in 85% yield. Yellow blocks of (I) suitable for X-ray analysis were obtained by slow evaporation of an acetonitrile solution.

Refinement

The H atoms were included in calculated positions (C—H = 0.93–0.96 Å) and refined as riding $U_{\text{iso}}(\text{H}) = 1.2U_{\text{eq}}(\text{C})$ or $1.5U_{\text{eq}}(\text{methyl C})$.

Figures

Fig. 1. The structure of (I), with displacement ellipsoids for non-H atoms drawn at the 30% probability level.

Fig. 2. A packing diagram for (I), with hydrogen bonds drawn as dashed lines.

Extinction coefficient: 0.0160 (19)

Special details

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

Refinement. Refinement of F^2 against ALL reflections. The weighted R -factor wR and goodness of fit S are based on F^2 , conventional R -factors R are based on F , with F set to zero for negative F^2 . The threshold expression of $F^2 > 2\sigma(F^2)$ is used only for calculating R -factors(gt) etc. and is not relevant to the choice of reflections for refinement. R -factors based on F^2 are statistically about twice as large as those based on F , and R -factors based on ALL data will be even larger.
