Received 18 October 2007; accepted 19 October 2007

Key indicators: single-crystal X-ray study; T = 173 K; mean  $\sigma$ (C–C) = 0.002 Å; R factor = 0.032; wR factor = 0.088; data-to-parameter ratio = 23.0.

The geometric parameters of the title compound,  $C_{13}H_7Cl_3OS$ , are in the usual ranges. The molecule is almost planar (r.m.s. deviation of all non-H atoms 0.193 Å). The dihedral angle between the two aromatic rings is 14.41 (7)°. The C=C double bond is *trans* configured. The bond between the carbonyl bond and the thienyl ring is in an eclipsed conformation. The crystal packing is stabilized by a weak C-H···O hydrogen bond.

#### Comment

Chalcones, 1,3-diphenyl-1-propan-3-one derivatives, have a wide range of biological properties, including anticancer (Achanta *et al.*, 2006; Kim, Choi *et al.*, 2006), antiproliferative (Hsu *et al.*, 2006), anti malarial (Wirasathien *et al.*, 2006), anti inflammatory (Anuradha *et al.*, 2006), anti-allergic (Daikonya *et al.*, 2004) and antagonist (Kim, Kim *et al.*, 2006). Chalcones exhibit inhibitory activity against nitric oxide production (Han *et al.*, 2006), dengue 2 virus NS3 protease (Ki-at *et al.*, 2006) and tyrosinase (Khatib *et al.*, 2005). Some chalcone derivatives exhibit nonlinear optical properties (Gao & Ng, 2006). Thiophene analogues of antiviral chalcones have been studied (Binder *et al.*, 1985). The crystal structures of (2E)-1-(3-bromo-2-thienyl)-3-(4-chlorophenyl)prop-2-en-1-one (Yathirajan, Ashalatha *et al.*, 2006), (2E)-1-(3-bromo-2-thienyl)-3-(4-methoxy-2,3,6-trimethylphenyl)prop-2-en-1-one (Yathirajan, Narayana *et al.*, 2006), (2E)-1-(3-methyl-2-thienyl)-3-(3-nitrophenyl)prop-2-en-1-one (Sarojini *et al.*, 2007) and (2E)-1-(3-methyl-2-thienyl)-3-(3-nitrophenyl)prop-2-en-1-one (Sarojini

Geometric parameters of the title compound are in the usual ranges. The molecule is almost planar (r.m.s. deviation of all non-H atoms 0.193 Å). The C–C double bond is *trans* configured. The bond between the carbonyl bond and the thienyl ring is in an eclipsed conformation. The crystal packing is stabilized by a weak C—H···O hydrogen bond.

#### **Experimental**

The title compound was prepared by the Claisen-Schmidt condensation of equimolar quantities of 1-(2-thienyl)ethanone (1.26 g, 0.01 mol) and 2,3,5-trichlorobenzaldehyde (2.09 g, 0.01 mol) in ethanol (25 ml), in the presence of sodium hydroxide (8 ml, 10%) (see reaction scheme). The product was recrystallized from ethyl acetate by slow evaporation [m.p.: 378 K]. Analysis for  $C_{13}H_7Cl_3OS$ : Found (Calculated) C 49.10 (49.16), H 2.19 (2.22), S 10.02% (10.10%).

#### Refinement

All H atoms were found in a difference map, but geometrically positioned and refined with fixed individual displacement parameters [U(H) = 1.2  $U_{eq}(C)$ ] using a riding model with C—H = 0.95 Å.

#### **Figures**

Primary atom site location: structure-invariant direct Extinction coefficient: 0.0137 (17)

Secondary atom site location: difference Fourier map

#### Special details

**Geometry**. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

**Refinement**. Refinement of  $F^2$  against ALL reflections. The weighted *R*-factor *wR* and goodness of fit S are based on  $F^2$ , conventional *R*-factors *R* are based on F, with F set to zero for negative  $F^2$ . The threshold expression of  $F^2 > 2 \operatorname{sigma}(F^2)$  is used only for calculating *R*-factors(gt) *etc.* and is not relevant to the choice of reflections for refinement. *R*-factors based on  $F^2$  are statistically about twice as large as those based on F, and R– factors based on ALL data will be even larger.
