Received 19 November 2007; accepted 26 November 2007

Key indicators: single-crystal X-ray study; $T = 168$ K; mean $\sigma(\text{C}-\text{C}) = 0.003$ Å; R factor = 0.028; wR factor = 0.081; data-to-parameter ratio = 16.6.

The title compound, $C_{15}H_{15}NO_2S_3$, exists in a bicyclic form, with resonance contributions from two monocyclic forms, each without a second S–S bond. The trithiapentalene heterocyclic ring system is planar, with a mean deviation of 0.014 (2) Å from the mean plane, and is inclined to the plane of the attached phenyl ring at an angle of 17.24 (7)°.

Ethyl 3-(6-phenyl-4λ⁴-1,2-dithiolo[1,5-*b*][1,2,4]dithiazol-2-yl)propanoate

R. Markovic, A. Rasovic and P. J. Steel

Comment

The title compound (1) was prepared in the course of a study of the thionation of thiazolidine enaminones (Marković *et al.*, 2004). It could potentially exist in any of three forms (1 A - 1 C) as shown in Scheme 1. The X-ray structure reveals that it exists in the bicyclic form (1 A). However, comparison of the S—S bond lengths (Table 1) with the average value (2.07 Å) for the 31 1,2-dithiolanes and the 11 3-imino-3*H*-1,2-dithioles (as in 1B) in the Cambridge Structural Database (Allen, 2002) along with consideration of the S—C bond lengths suggests that resonance forms (1B) and (1 C) make some contribution to the overall structure. These results are consistent with two structurally related compounds that have been published previously (Rašović *et al.*, 2007; Yokoyama *et al.*, 1985) and with the known resonance behaviour of 1,6,6a-trithiapentalenes (Lozac'h, 1984; Terem, 1996; Rašović *et al.*, 2007).

The whole molecule is remarkably close to being planar with both substituents lying in the same plane as the trithiaaza-pentalene ring system. This bicyclic system is planar [mean deviation = 0.014 (3) Å] and the attached phenyl ring is inclined to this plane at an angle of 17.4 (1) °. Inspection of the packing shows that there are short intermolecular contacts [3.491 (1) Å] between sulfur atoms of molecules related by a crystallographic centre of inversion, as well as other weak C—H···O and C—H···π interactions.

Experimental

The title compound was prepared as previously described (Marković *et al.*, 2004).

Refinement

All H atoms were introduced in calculated positions as riding atoms, with $U_{\text{iso}}(\text{H}) = 1.5U_{\text{eq}}(\text{C})$ for the methyl group and $U_{\text{iso}}(\text{H}) = 1.2U_{\text{eq}}(\text{C})$ for other carbons.

Figures

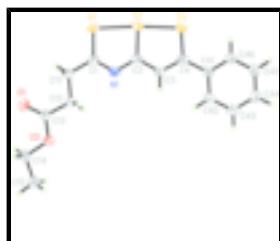

Fig. 1. The molecular structure of (1), showing displacement ellipsoids at the 50% probability level.

Refinement

Refinement on F^2	Secondary atom site location: difference Fourier map
Least-squares matrix: full	Hydrogen site location: inferred from neighbouring sites
$R[F^2 > 2\sigma(F^2)] = 0.028$	H-atom parameters constrained
$wR(F^2) = 0.081$	$w = 1/[\sigma^2(F_o^2) + (0.040P)^2 + 0.6P]$ where $P = (F_o^2 + 2F_c^2)/3$
$S = 1.04$	$(\Delta/\sigma)_{\text{max}} = 0.001$
3154 reflections	$\Delta\rho_{\text{max}} = 0.22 \text{ e \AA}^{-3}$
190 parameters	$\Delta\rho_{\text{min}} = -0.18 \text{ e \AA}^{-3}$
Primary atom site location: structure-invariant direct methods	Extinction correction: none

Special details

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

Refinement. Refinement of F^2 against ALL reflections. The weighted R -factor wR and goodness of fit S are based on F^2 , conventional R -factors R are based on F , with F set to zero for negative F^2 . The threshold expression of $F^2 > \sigma(F^2)$ is used only for calculating R -factors(gt) etc. and is not relevant to the choice of reflections for refinement. R -factors based on F^2 are statistically about twice as large as those based on F , and R -factors based on ALL data will be even larger.
