Received 10 December 2007; accepted 17 January 2008

Key indicators: single-crystal X-ray study; $T = 120$ K; mean $\sigma(\text{C}-\text{C}) = 0.005$ Å; H-atom completeness 96%; disorder in solvent or counterion; R factor = 0.035; wR factor = 0.086; data-to-parameter ratio = 11.5.

The asymmetric unit of the title complex, $[\text{Cu}_2(\text{C}_9\text{H}_4\text{O}_6)(\text{C}_{10}\text{H}_8\text{N}_2)_4](\text{C}_9\text{H}_4\text{O}_6)\cdot\text{C}_{10}\text{H}_8\text{N}_2\cdot 13\text{H}_2\text{O}$, comprises two formula units. The two Cu^{II} centres are bridged by a 5-carboxybenzene-1,3-dicarboxylate (Hbtc) ligand. Each of the metal centres is bonded to four N atoms of two bidentate 2,2'-bipyridine ligands (bpy) and one O atom of the Hbtc ligand in a highly distorted square-pyramidal geometry. The secondary structure is stabilized by a variety of $\text{O}-\text{H}\cdots\text{O}$ hydrogen bonds and $\pi-\pi$ stacking interactions connecting the complex cations, Hbtc anions, bpy and water molecules of crystallization. Three water molecules are disordered over two positions, with site occupancy factors of *ca* 0.8 and 0.2.

(μ -5-Carboxybenzene-1,3-dicarboxylato- $\kappa^2O^1:O^3$)bis[bis(2,2'-bipyridine- κ^2N,N')copper(II)] 5-carboxybenzene-1,3-dicarboxylate 2,2'-bipyridine solvate tridecahydrate

J. Marek and Z. Trávníček

Comment

The structure of the title complex (Fig. 1) comprises two crystallographically independent dinuclear Cu^{II} dications, two 1,3,5-carbotricarboxylate dianions (Hbtc), two 2,2'-bipyridine (bpy) and 26 water molecules of crystallization. The two Cu^{II} metal centres are bridged by one Hbtc anion in which two carboxylato groups are coordinated to two copper atoms in a monodentate fashion. Each of the metal centres is bonded to four N atoms of two bpy ligands and one O atom of the Hbtc ligand in a highly distorted square-pyramidal geometry ($\tau = 0.48$ for Cu1, $\tau = 0.44$ for Cu2, $\tau = 0.46$ for Cu3 and $\tau = 0.46$ for Cu4). The Cu—N distances vary from 1.966 (3) to 2.161 (3) Å, while those of Cu—O range from 1.987 (2) to 2.043 (2) Å. The atoms forming the Cu₂(btc) moiety deviate from planarity with dihedral angles between the bridging benzene ring and the peripheral 4-membered C—O—Cu—O rings being in the range 18.02 (8)° to 28.20 (8)° (Brandenburg, 2006). The distance between the two Cu^{II} cations is 10.4977 (5) Å for Cu1...Cu2, and 10.5670 (5) Å for Cu3...Cu4. For comparison, the Cu...Cu separations in recently published Cu-complexes involving the Cu₂(btc) moiety with one uncoordinated carboxylato group that are included in the CSD (Cambridge Structural Database, Version 5.28.1; Allen, 2002) are 9.5245 (5) Å (Pech & Pickardt, 1988), 9.6328 (10) Å (Chui *et al.*, 1999), 9.2316 (3) Å (Holmes *et al.*, 2004), 8.067 (7) and 8.207 (7) Å (Wang *et al.*, 2005), and 8.5541 (9) Å (Cooper *et al.*, 2005).

The secondary structure is stabilized by a variety of O—H...O hydrogen bonds (Table 1, Fig. 2) and π - π stacking interactions (Fig. 3), connecting the cations, Hbtc anions, and bpy and water molecules of crystallization.

Experimental

The title complex was prepared in a quest to synthesize a trinuclear copper^{II} complex in which three metal centres would be connected *via* a benzene-1,3,5-tricarboxylato anion as a bridging ligand. Specifically: an aqueous solution (20 ml) of benzene-1,3,5-tricarboxylic acid (1 mmol) was added to a suspension of Cu(OH)₂ (3 mmol) in water (40 ml). The reaction mixture was refluxed for 3 hrs. During this time period, an ethanolic solution of 2,2'-bipyridine (6 mmol) was added dropwise to the reaction mixture while stirring. Then, the resulting solution was filtered and left to stand at room temperature. Blue crystals, suitable for single-crystal X-ray analysis, were obtained by slow evaporation of the solvents used over a period of several weeks.

Refinement

Some atoms of water molecules of crystallization (namely O atoms O75, O82 and O83) were refined as disordered between two positions [the site occupancy factors were refined to 0.788 (4) and 0.212 (4)], where the major positions were refined anisotropically and the minor ones isotropically. C-bound H-atoms were included in the riding model approximation with C—H distances of 0.93 Å, and with $U_{iso}(H)$ values of 1.2 $U_{eq}(C_{aromatic})$. The O-bound H atoms were refined, with the O—H

supplementary materials

distances restrained to 0.85 (2) Å and with $U_{\text{iso}}(\text{H})$ values of $1.5U_{\text{eq}}(\text{O}_{\text{water}})$; distances are given in Table 1. The maximum and minimum residual electron density peaks were located with distances 1.10 and 0.80 Å from the O24 atom.

A profile of a few (namely 7) low angle reflections has been strongly influenced by shielding by the beam-stopper, therefore these reflections were excluded from the refinement.

Special details

Experimental. Absorption correction (full details): *CrysAlis RED* (Oxford Diffraction, 2006) Version 1.171.31.7 (release 18–10-2006 CrysAlis171. NET) (compiled Oct 18 2006,16:28:17). Empirical absorption correction using spherical harmonics, implemented in SCALE3 ABSPACK scaling algorithm.

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

supplementary materials

Refinement. Refinement of F^2 against ALL reflections. The weighted R -factor wR and goodness of fit S are based on F^2 , conventional R -factors R are based on F , with F set to zero for negative F^2 . The threshold expression of $F^2 > 2\sigma(F^2)$ is used only for calculating R -factors(gt) *etc.* and is not relevant to the choice of reflections for refinement. R -factors based on F^2 are statistically about twice as large as those based on F , and R -factors based on ALL data will be even larger.
