Correspondence e-mail: zjlsxyhx@126.com

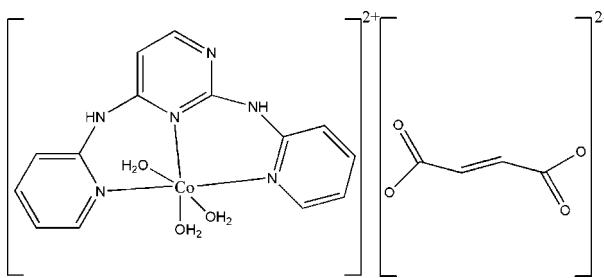

Received 18 September 2008; accepted 9 October 2008

Key indicators: single-crystal X-ray study; $T = 298\text{ K}$; mean $\sigma(\text{C}-\text{C}) = 0.004\text{ \AA}$; R factor = 0.026; wR factor = 0.078; data-to-parameter ratio = 12.2.

The Co atom in the title compound, $[\text{Co}(\text{C}_{14}\text{H}_{12}\text{N}_6)(\text{H}_2\text{O})_3]\text{C}_4\text{H}_2\text{O}_4$, has a *mer*- CoN_3O_3 octahedral coordination arising from the tridentate *N*²,*N*⁴-di-2-pyridylpyrimidine-2,4-diamine (tpda) ligand and three coordinated water molecules. The asymmetric unit contains two fumarate half-anions, both completed by inversion symmetry. A network of N—H···O and O—H···O hydrogen bonds leads to a three-dimensional network in the crystal structure.

Triaqua(*N*²,*N*⁴-di-2-pyridylpyrimidine-2,4-diamine)cobalt(II) fumarate

M. Yang

Comment

Transition metal complexes with polypyridylamine ligands, possessing diverse structures and unusual optical and electromagnetic properties (Sheu *et al.*, 1996), have aroused great interest among researchers. The tri-pyridylamine ligand can exhibit donor as well as acceptor properties and can act as a chelating ligand (Peng *et al.*, 2000). In this paper, we report the synthesis and crystal structure of the title compound, (I), (Fig. 1).

The Co atom in (I) has an octahedral coordination formed by the N,N,N-tridentate tpda ligand and three coordinated water molecules. The tpda ligand is tri-coordinated, with the peripheral N1 and N5 atoms in the axial positions [N1—Co1—N5 = 174.48 (6) $^{\circ}$] and the central N3 atom in the equatorial plane of the bipyramidal. The remaining two equatorial positions are occupied by water molecules (Table 1). The three pyridine rings of the tpda ligand are not coplanar: the dihedral angles between the planes of the central pyridine ring and two peripheral rings are 18.5 (4) and 26.4 (2) $^{\circ}$ respectively.

The H atoms of both NH groups of the tpda ligand and coordinated water molecules are involved in hydrogen bonds with O atoms of carboxylate groups of fumarate which link the complex molecules to form an infinite three-dimensional network (Table 2, Fig. 2).

The molecular configuration of (I) is similar to that of [2,6-bis(2-pyridylamino)pyridine]dinitrato cadmium monohydrate (Fang *et al.*, 2005).

Experimental

Tpda (0.025 g, 0.07 mmol), Co(NO₃)₂ (0.026 g, 0.1 mmol), fumaric acid (0.023 g, 0.09 mmol) and NaOH (0.041 g, 0.1 mmol) were mixed in acetonitrile, and the mixture was heated for six hours under reflux with stirring. The resultant was then filtered to give a solution which was infiltrated by diethyl ether in a closed vessel, one week later some pink blocks of (I) were obtained.

Refinement

The water H atoms were located in a difference map and refined with the restraint O—H = 0.85 (1) \AA and a fixed U_{iso} value of 0.08 \AA^2 . The other H atoms were positioned geometrically (C—H = 0.93 \AA , N—H = 0.86 \AA) and refined as riding with U_{iso}(H) = 1.2U_{eq}(carrier).

307 parameters	$\Delta\rho_{\min} = -0.33 \text{ e \AA}^{-3}$
9 restraints	Extinction correction: none
Primary atom site location: structure-invariant direct methods	

Special details

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

Refinement. Refinement of F^2 against ALL reflections. The weighted R -factor wR and goodness of fit S are based on F^2 , conventional R -factors R are based on F , with F set to zero for negative F^2 . The threshold expression of $F^2 > \sigma(F^2)$ is used only for calculating R -factors(gt) etc. and is not relevant to the choice of reflections for refinement. R -factors based on F^2 are statistically about twice as large as those based on F , and R -factors based on ALL data will be even larger.
