Received 6 November 2008; accepted 12 November 2008

Key indicators: single-crystal X-ray study; $T = 200$ K; mean $\sigma(C-C) = 0.003$ Å; disorder in main residue; R factor = 0.077; wR factor = 0.262; data-to-parameter ratio = 18.3.

In the title molecule, $C_{18}H_{16}F_3N_5O_2$, the dihedral angle between the pyridine ring and the fused benzene ring is $4.50(10)^\circ$. The triazole ring makes dihedral angles of $54.48(12)$ and $57.91(11)^\circ$ with the pyridine and benzene rings, respectively. The morpholine ring atoms are disordered over two positions; the site-occupancy factors are *ca* 0.53 and 0.47. Intermolecular C—H···F hydrogen bonding is found in the crystal structure. Furthermore, C—H···O and C—H···N intramolecular contacts are also present.

{5-Methyl-1-[8-(trifluoromethyl)quinolin-4-yl]-1*H*-1,2,3-triazol-4-yl}(morpholino)methanone

N. Anuradha, A. Thiruvalluvar, M. Mahalinga and R. J. Butcher

Comment

1,2,3-Triazoles and their benzo derivatives have attracted considerable attention because of their theoretical interest and synthetic value. They also find numerous applications in industry and agriculture due to their extensive biological activities and successful application as fluorescent whiteners, light stabilizers and optical brightening agents (Sanghvi *et al.*, 1990). Thiruvalluvar *et al.* (2007) have reported the crystal structure of 1-{5-Methyl-1-[8-(trifluoromethyl)-quinolin-4-yl]-1*H*-1,2,3-triazol-4-yl}-ethanone.

In the title molecule, $C_{18}H_{16}F_3N_5O_2$, Fig. 1., the quinoline unit is nearly planar. The dihedral angle between the pyridine ring and the fused benzene ring is $4.50\ (10)^\circ$. The triazole ring makes a dihedral angle of $54.48\ (12)^\circ$ and $57.91\ (11)^\circ$, with that of pyridine and benzene rings, respectively. The trifluoromethyl group is coplanar with the attached benzene ring, except the fluoro atoms. The disordered morpholine ring is in chair form. Intermolecular $C_3—H_3\cdots F_1(1+x, y, z)$ hydrogen bond is found in the crystal structure. Further, $C_7—H_7\cdots F_1$, $C_{16}—H_{16B}\cdots O_1$, $C_{23A}—H_{23B}\cdots O_1$ and $C_{25A}—H_{25A}\cdots N_{13}$ intramolecular contacts are also found (Fig. 2., Table 1).

Experimental

5-Methyl-1-[8-(trifluoromethyl)quinolin-4-yl]-1*H*-1,2,3-triazole-4-carboxylic acid (10 g, 0.031 mol) was treated with thionyl chloride (3.7 g, 0.031 mol) in chloroform (75 ml) and the mixture was heated to reflux for 2 h. The solvent was distilled out completely under vacuum. The residue was diluted with dry tetrahydrofuran (50 ml) and cooled to 273 K. This mixture was added slowly to the previously cooled morpholine in dry tetrahydrofuran (50 ml). Stirred for 1 h at 298 K and quenched to ice cooled water (500 ml). The precipitated solids were filtered, washed with water. The crude product was recrystallized from methanol. Yield 7.5 g (61.9%).

Refinement

H atoms were positioned geometrically and allowed to ride on their parent atoms, with $C—H = 0.95 - 0.99\ \text{\AA}$ and $U_{\text{iso}}(\text{H}) = 1.2 - 1.5$ times $U_{\text{eq}}(\text{C})$. The morpholine ring atoms are disordered over two positions; the site-occupancy factors refined to 0.534 (5) and 0.466 (5).

Primary atom site location: structure-invariant direct methods	Extinction correction: none

Special details

Geometry. Bond distances, angles etc. have been calculated using the rounded fractional coordinates. All su's are estimated from the variances of the (full) variance-covariance matrix. The cell e.s.d.'s are taken into account in the estimation of distances, angles and torsion angles

Refinement. Refinement of F^2 against ALL reflections. The weighted R -factor wR and goodness of fit S are based on F^2 , conventional R -factors R are based on F , with F set to zero for negative F^2 . The threshold expression of $F^2 > 2\sigma(F^2)$ is used only for calculating R -factors(gt) etc. and is not relevant to the choice of reflections for refinement. R -factors based on F^2 are statistically about twice as large as those based on F , and R -factors based on ALL data will be even larger.
