Received 7 December 2008; accepted 17 December 2008

Key indicators: single-crystal X-ray study; $T = 293$ K; mean $\sigma(C-C) = 0.003$ Å; R factor = 0.045; wR factor = 0.137; data-to-parameter ratio = 17.1.

In the title molecule, $C_{21}H_{19}ClO_3$, the cyclohexene ring adopts an envelope conformation, with all substituents equatorial. The plane through its five coplanar atoms makes dihedral angles of 12.75 (14) and 74.16 (8) $^\circ$ with the phenyl and benzene rings, respectively. The dihedral angle between the latter two rings is 81.73 (12) $^\circ$. Intermolecular C—H···O hydrogen bonds and intramolecular C—H···Cl contacts are found in the crystal structure; a weak C—H···π interaction is also present.

Ethyl 6-*r*-(2-chlorophenyl)-2-oxo-4-phenylcyclohex-3-ene-1-*t*-carboxylate

N. Anuradha, A. Thiruvalluvar, K. Pandiarajan and C. Yuvaraj

Comment

Cyclohex-2-enone derivatives exhibit antifungal (Friedrich *et al.*, 2006) and anticancer (Rebacz *et al.*, 2007) activities. Cyclohex-2-enones have also been used in organic synthesis (Cokcer *et al.*, 1995; Pandey *et al.*, 2004).

Guzei (2004) has reported a crystal structure determination of 4,4,6,6-tetraphenylcyclohex-2-en-1-one, wherein the cyclohexenone ring is in a half-chair conformation. Shishkina *et al.* (2002) have reported the molecular structures of chloro-, methoxy- and methoxyphenyl-substituted (1R)-arylidene-p-(4-menthen)-3-ones. The cyclohexenone ring in these compounds has a sofa conformation.

The present X-ray diffraction study was undertaken to determine how the conformation of the system is affected by the substitution of a phenyl group at position 4, chlorophenyl group at position 6 and ethoxycarbonyl group at position 1 of the cyclohexenone ring.

In the title molecule, $C_{21}H_{19}ClO_3$, (Fig. 1), the cyclohexene ring adopts an envelope conformation, with all substituents equatorial. The plane through the five coplanar atoms C1/C2/C3/C4/C6 makes dihedral angles of $12.75(14)^\circ$ and $74.16(8)^\circ$ with the phenyl and benzene rings, respectively. The dihedral angle between the phenyl and benzene rings is $81.73(12)^\circ$. C33—H33···O16($1 + x, -1 + y, z$) and C56—H56···O16($-x, 1 - y, -z$) intermolecular hydrogen bonds and a C5—H5···Cl2 intramolecular contact are found in the crystal structure. Furthermore, a C17—H17A··· π ($-1 + x, y, z$) interaction involving the benzene (C51—C56) ring is also found (Fig. 2, Table 1).

Experimental

A mixture of *o*-chlorobenzylideneacetophenone (3.65 g, 0.015 mol), ethyl acetoacetate (2 ml, 0.015 mol) and sodium ethoxide (1 g, 0.015 mol) in absolute alcohol (50 ml) was refluxed for 14 h. After cooling, the reaction mixture was neutralized with 0.1 N HCl. It was then extracted with diethyl ether (3x20 ml). The organic layer was dried over anhydrous sodium sulfate, filtered and the solvents removed by rotary vacuum evaporation. A solid mass was obtained which was recrystallized from ethanol. Yield 2.22 g (61%).

Refinement

H atoms were positioned geometrically and allowed to ride on their parent atoms, with Csp^2 —H = 0.93, C(methyl)—H = 0.96, C(methylene)—H = 0.97 and C(methine)—H = 0.98 Å; $U_{iso}(H) = kU_{eq}(C)$, where $k = 1.5$ for methyl and 1.2 for all other H atoms.

supplementary materials

Figures

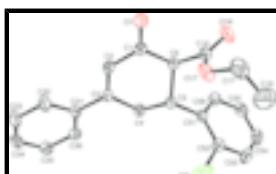

Fig. 1. The molecular structure of the title compound, showing the atom-numbering scheme and displacement ellipsoids drawn at the 30% probability level. H atoms have been omitted for clarity.

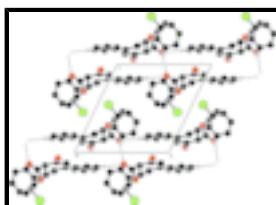

Fig. 2. The packing of the title compound, viewed down the a axis. Dashed lines indicate hydrogen bonds. H atoms not involved in hydrogen bonding have been omitted.

Refinement

Refinement on F^2	Secondary atom site location: difference Fourier map
---------------------	--

Least-squares matrix: full	Hydrogen site location: inferred from neighbouring sites
$R[F^2 > 2\sigma(F^2)] = 0.045$	H-atom parameters constrained
$wR(F^2) = 0.137$	$w = 1/[\sigma^2(F_o^2) + (0.0591P)^2 + 0.4414P]$ where $P = (F_o^2 + 2F_c^2)/3$
$S = 1.05$	$(\Delta/\sigma)_{\max} = 0.001$
3885 reflections	$\Delta\rho_{\max} = 0.53 \text{ e } \text{\AA}^{-3}$
227 parameters	$\Delta\rho_{\min} = -0.39 \text{ e } \text{\AA}^{-3}$
Primary atom site location: structure-invariant direct methods	Extinction correction: none

Special details

Geometry. Bond distances, angles *etc.* have been calculated using the rounded fractional coordinates. All su's are estimated from the variances of the (full) variance-covariance matrix. The cell e.s.d.'s are taken into account in the estimation of distances, angles and torsion angles

Refinement. Refinement of F^2 against ALL reflections. The weighted R -factor wR and goodness of fit S are based on F^2 , conventional R -factors R are based on F , with F set to zero for negative F^2 . The threshold expression of $F^2 > 2\sigma(F^2)$ is used only for calculating R -factors(gt) *etc.* and is not relevant to the choice of reflections for refinement. R -factors based on F^2 are statistically about twice as large as those based on F , and R -factors based on ALL data will be even larger.
