Received 14 November 2008; accepted 12 January 2009

Key indicators: single-crystal X-ray study; $T = 298$ K; mean $\sigma(C-C) = 0.020$ Å; R factor = 0.044; wR factor = 0.126; data-to-parameter ratio = 12.7.

The title compound, $[Tb(C_{18}H_{22.5}N_2O_4)_2]$, is isotopic with its Pr and Tb analogues. All interatomic distances, angles and the hydrogen bond geometry are very similar for the three structures.

Related literature

For related structures, see: Liu *et al.*, (2007), Xia *et al.* (2006). For isotopic structures, see: Xia *et al.* (2009a,b).

Bis{6,6'-dimethoxy-2,2'-(ethane-1,2-diylbis(iminomethylene)diphenolato(1.5-)- κ^4O,N,N',O' }terbium(III)

H.-T. Xia, Y.-F. Liu, S.-P. Yang and D.-Q. Wang

Comment

Diamine derivatives are potentially multidentate ligands. we have recently reported the crystal structure ($C_{18}H_{24}O_2N_4$) (II) (Xia *et al.*, 2006) which is the ligand of the title compound and two complexes $[Ce(C_{18}H_{22}N_2O_4)_2]$ (III) (Liu *et al.*, 2007), $[Er(C_{18}H_{22.5}N_2O_4)_2]$ (IV) (Xia *et al.*, 2009). We report here the crystal structure of new rare earth complex (I).

In the title complex (I), the coordination environment of the Tb atom and coordination modes of (I) ligands to Tb^{III} ion is in agreement with the complexes reported above (Fig. 1). The average bond lengths of between the terbium center oxygen atoms are 2.205 (7) \AA and nitrogen atom are 2.616 (9) \AA , longer than the 2.199 (4) \AA and shorter than the 2.624 (4) \AA of complexes (III), respectively, longer than those 2.203 (6) \AA and longer than the 2.612 (8) \AA of complexes (IV), respectively. The dihedral angles between phenyl ring (C4—C9 ring) and another phenyl ring are 41.85 (31) $^\circ$ (C12—C17 ring), 47.59 (30) $^\circ$ (C4A—C9A ring) and 15.27 (48) $^\circ$ (C12A—C17A ring) [symmetry codes: (A) 1 - x , 1 - y , z].

In (I), the Tb atom is eight-coordinated by four O atoms and four N atoms from two 6,6'-dimethoxy-2,2'-(ethane-1,2-diylidiminodimethylene)diphenol. The molecules are connected by van der Waals forces, resulting in a three-dimensional network.

Experimental

A solution of 6,6'-dimethoxy-2,2'-(ethane-1,2-diylidiminodimethylene) diphenol (0.328 g, 2 mmol) in ethanol (20 ml), and then a solution of $Tb(NO_3)_3 \cdot 6H_2O$ (0.454 g, 1 mmol) in ethanol (10 ml) was added. The reaction mixture was stirred for 3 h in the air and then filtered. X-ray quality crystals of (I) were obtained by evaporation of an ethanol solution.

Refinement

The space group was uniquely assigned from the systematic absences. All H atoms were located in difference Fourier maps. H atoms bonded to C, O and N atoms were treated as riding atoms, with C—H distances of 0.93 \AA (aryl), 0.96 \AA (methyl), 0.97 \AA (methylene) and N—H distances of 0.90 \AA (amino), $U_{iso}(H) = 1.2U_{eq}(\text{aryl, methylene, NH})$ or $1.5U_{eq}(\text{C})$ (methyl or OH). The H3C bonded to O3 is disordered and were refined with the occupancies ties to 0.5.

Figures

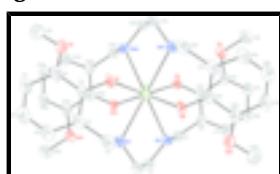

Fig. 1. The molecular structure of (I), showing the atom-labelling scheme. Displacement ellipsoids are at the 30% probability level. For clarity, H atoms have been omitted. [Symmetry codes: (A) 1 - x , 1 - y , z].

Special details

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

Refinement. Refinement of F^2 against ALL reflections. The weighted R -factor wR and goodness of fit S are based on F^2 , conventional R -factors R are based on F , with F set to zero for negative F^2 . The threshold expression of $F^2 > \sigma(F^2)$ is used only for calculating R -factors(gt) etc. and is not relevant to the choice of reflections for refinement. R -factors based on F^2 are statistically about twice as large as those based on F , and R -factors based on ALL data will be even larger.
